NXP UM12121 Development Board using MCUX Plessor

Product Information

Specifications

- **Target MCU:** NXP MCXA156
- **Core:** Arm Cortex-M33 running at speeds up to 96 MHz
- **Supports:** Industrial communication protocol, BLDC motor/PMSM control, sensor interfaces (MIPI I3C, I2C, SPI)
- **Compatibility:** Arduino boards, motor control boards, Mikroe click boards, Pmod boards
- **Development Tools:** NXP MCUXpresso IDE, IAR Embedded Workbench, Arm Keil MDK
- **Debug Probe:** Onboard MCU-Link based on NXP LPC55S69
- **Interfaces:** USB Type-C, CAN, SWD, GPIO/PWM, UART/SPI/I2C/ADC/PWM, and more
- Lead-free and RoHS-compliant

Product Usage Instructions

1. Powering the Board

Connect the FRDM-MCXA156 board to a power source using the USB Type-C connector.

2. Programming the MCU

Use development tools such as NXP MCUXpresso IDE, IAR Embedded Workbench, or Arm Keil MDK to program the MCXA156 MCU.

3. Debugging

For debugging purposes, utilize the onboard MCU-Link debug probe connected via USB Type-C.

4. Interfacing with Peripherals

The board supports various interfaces including UART, SPI, I2C, ADC, and PWM. Connect peripherals to the corresponding headers or sockets based on your requirements.

5. Compatibility with Expansion Boards

Utilize the Arduino/FRDM headers, mikroBUS headers, and Pmod header to connect compatible expansion boards for additional functionality.

FAQ

Q: Can I use the FRDM-MCXA156 board with Arduino UNO R3?

A: Yes, the board is compatible with Arduino UNO R3.

Q: What are the supported development tools for programming the MCXA156 MCU?

A: Supported development tools include NXP MCUXpresso IDE, IAR Embedded Workbench, and Arm Keil MDK.

Q: Does the board support industrial communication protocols?

A: Yes, the board supports industrial communication protocols along with other features suitable for IoT applications.
