MDC-KP09 Alarm Clock 1080P WIFI Camera

User Guide For APP Installation

For iOS Devices:

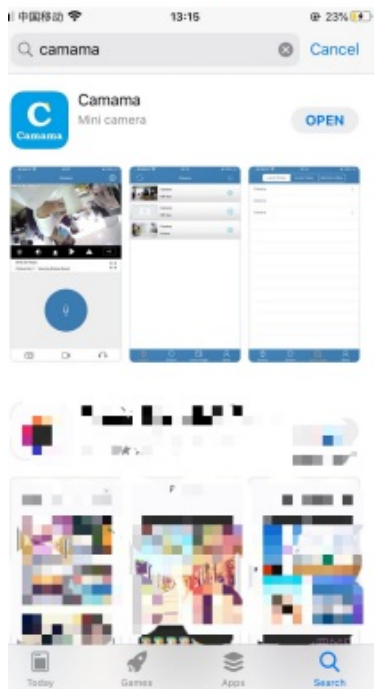

- a. Scan below QR Code for iOS operating system to download and install "Camama" APP with iPhone or iPad devices.
- b. Search "Camama" in App Store with your iOS devices, download and install App.

For Android Devices:

- a. Scan below QR Code for Android operating system to download and install "Camama" App with Mobile or tablet devices.
- b. Search "Camama" in Google Play with your iOS devices, download and install App.

iOS Device QR Code

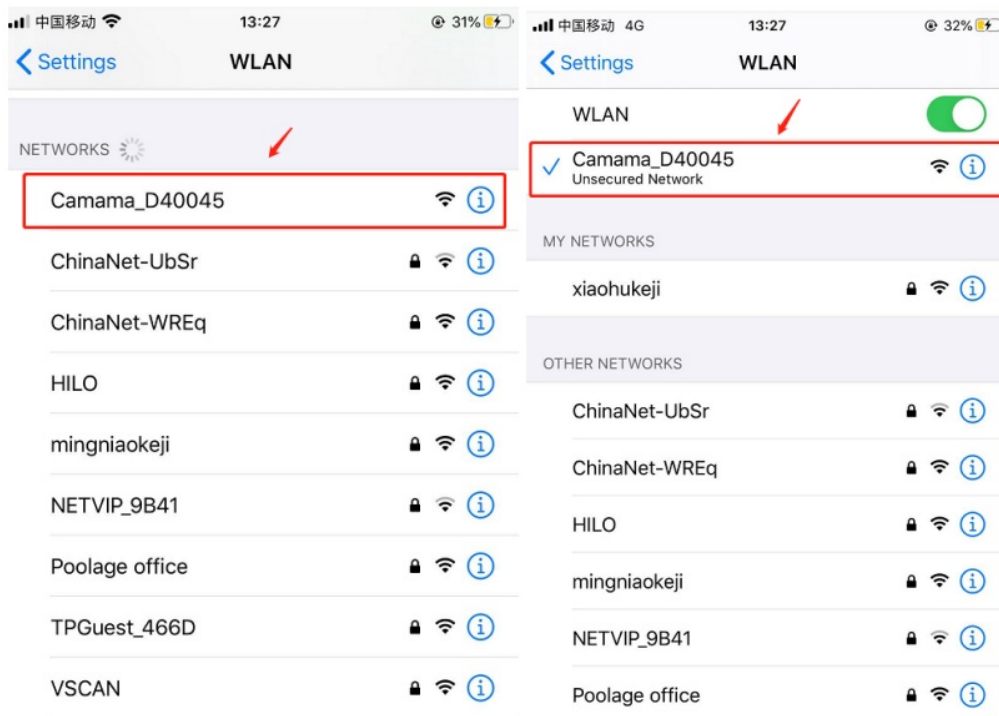

Android Device QR Code

Adding New Camera Device

- A. Connected the power supply and turn on the device by ON/OFF switch. The green light will flashing and the camera are waiting to be connected.
- B. Enter your phone "settings"-> choose "WLAN"-> find the camera's hot-spot signal (the name of the signal is "Camama_XXXXX"), connects the camera's hot spots.

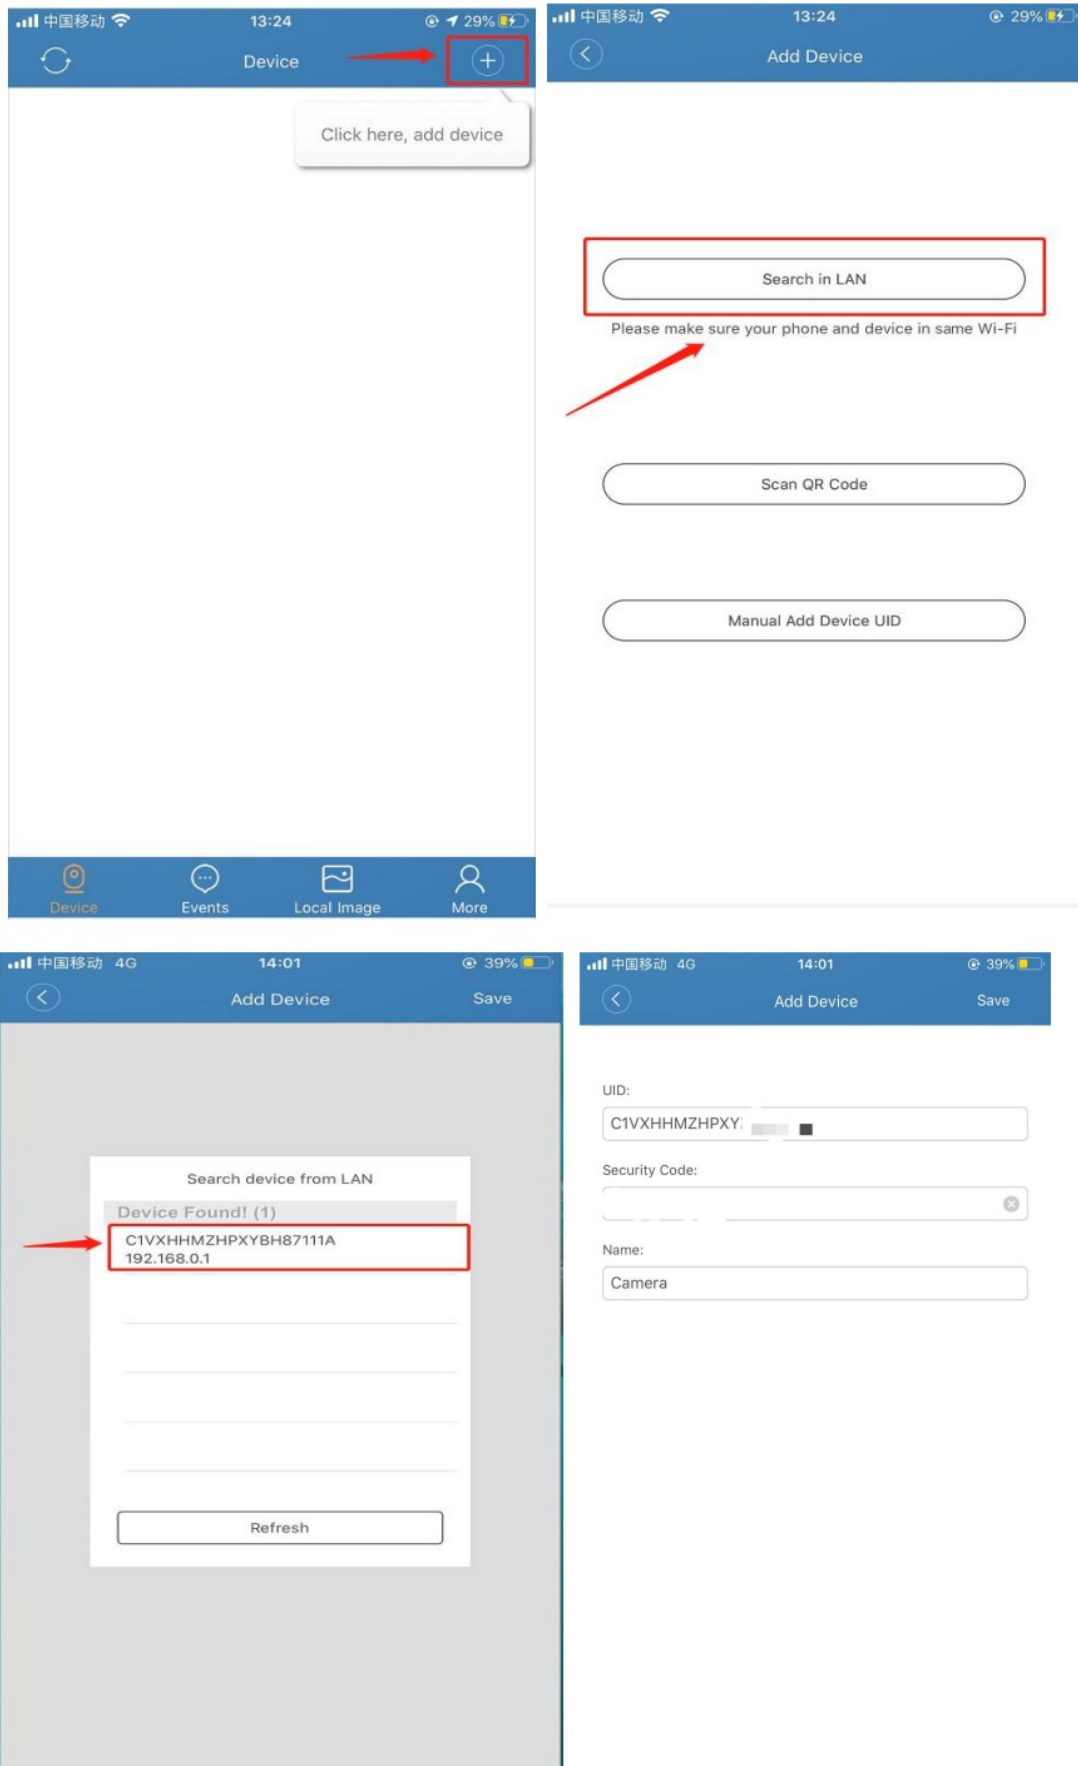

Important Note!

If you can not find the camera's hot-spot signal or can't connect, please reboot the device by press the reset button about 5s until listening a sound of "Ding", after that, the hot spot signal will come up again and you can connect it for next steps.

C. Load the APP (Camama) and click the  button to add new device->choose "Search in LAN"->Click the device ID and Saved. After this step Finished, the camera has been added to the App and you can watch the video via hot spots at distance of 10-15m range(Point-Point Mode).

Please noted: On the above step, some of iPhone user can't find the device, how to resolve it?

If you're using IOS14.0 or above, when you connect the device at the first time, please shut-off the cellular data of your phone, then go back to app and refresh it, then you'll find the device come up, after connection was done, you can turn on the cellular data of your phone.

WIFI Setting For Remote Control (Remote Mode)

Click the setting button->Choose the "WIFI Setting"->Click the " Manage Wi-Fi networks". Please wait for a few seconds until the SSID shows "None" and then choose your home wifi and input your passwords, click the OK button, wait for about 5~10 second. When it shows "online" again, it means the wifi setting is successful.

After this step was done, the second green light will not flashing, it means the camera has been connected to router successfully, then you can watch your home and access the live feed at any anytime from anywhere by your mobile phone (Remote Control)

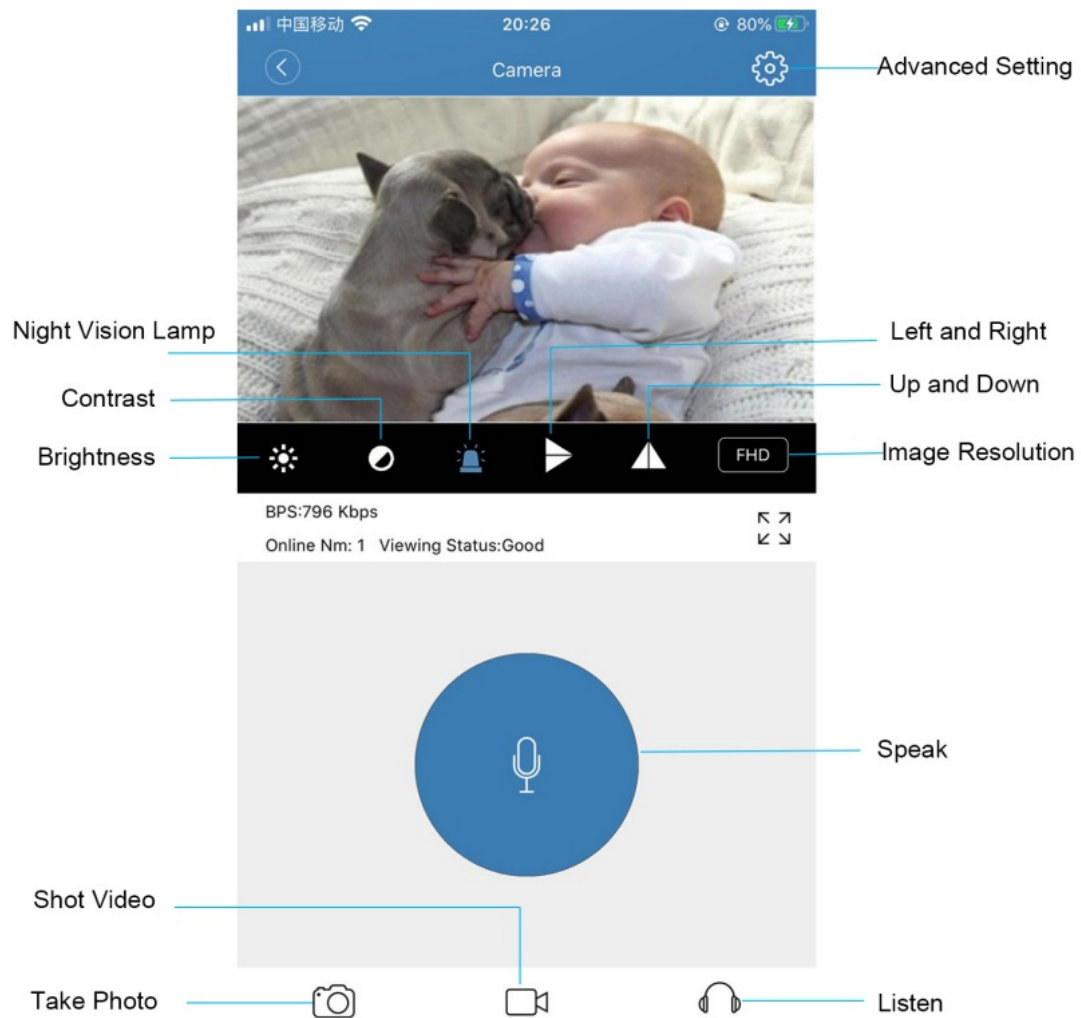

Note:

1. After input your wifi passwords and config the connection, the device will restart automatically and wait for the camera to restart, which will be completed in about 20-40 seconds. During the connection process, please do not shut-off the device manually.
2. When connecting to WiFi, please make sure input the correct WiFi password. If the passwords is wrong, the camera will be offline, then you need to reboot the device and re-pair it.

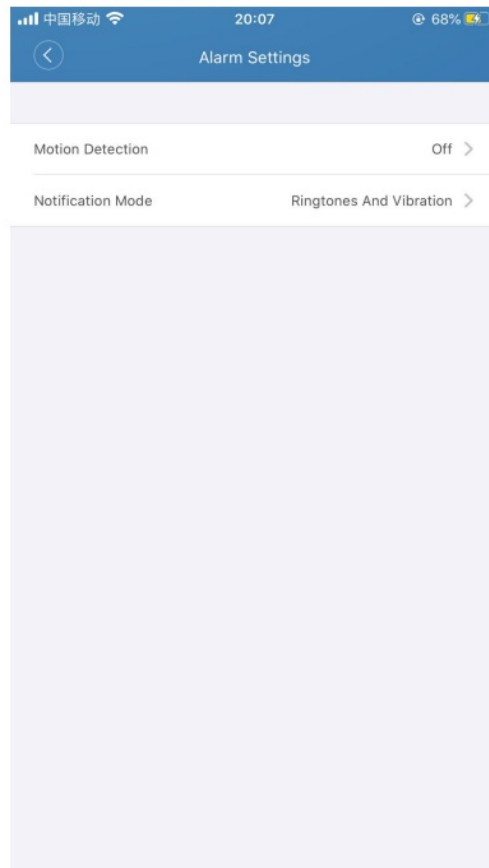

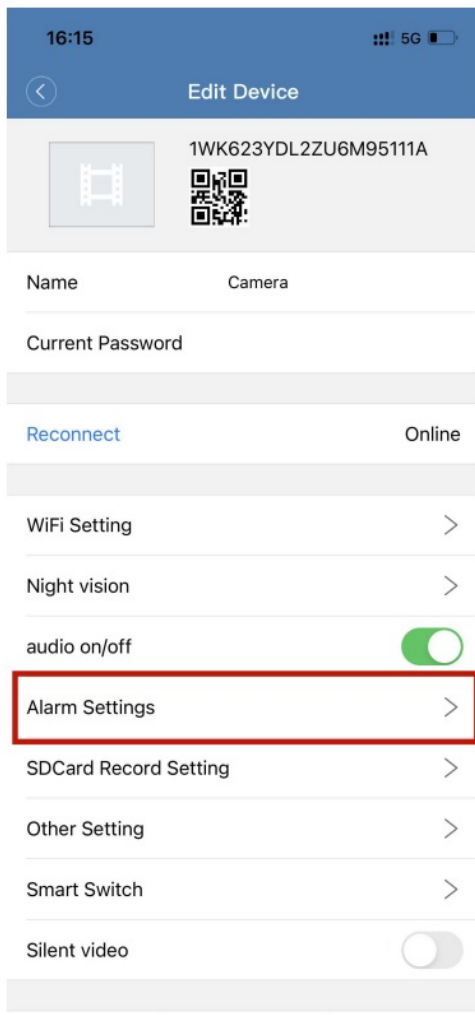

Live Feed and Remote Viewing

(Live Stream and Remote 7/24 Monitoring from anywhere)

Motion Detection Settings

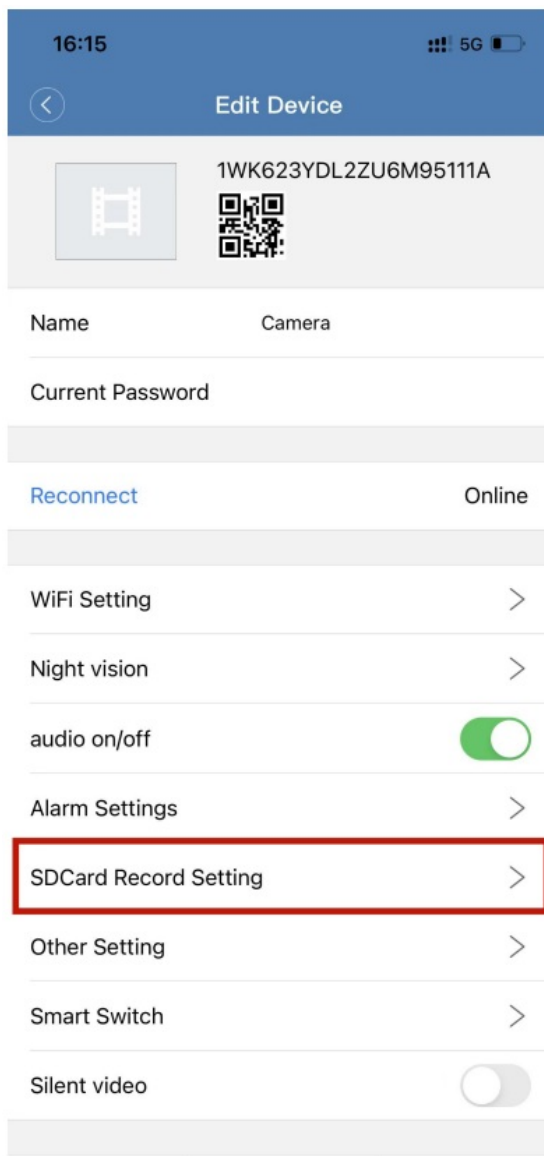

Click the setting button->Choose the "Alarm Setting" to set motion detection. You can active the motion mode here and choose the levels of motion detection. It has 4 levels of motion(Low, Medium, High, Max)

Please note: After activated the alarm function, If you still can not receive the alerts by phones, please go to your phone setting – find the notification management – Tap the App: Camama – Allow the App to push notification.

SD Card Recording Settings

Click the setting button->Choose the “SD Card Record Setting” to set SD Card. You can active the SD card recording while insert a Micro SD card, you have 4 recording modes to choose (Off, Full time recording, Alarm recording and Timing Record)

Notes:

This camera support both recording with/without SD card.

- A. If without SD card, it shoot videos and saved to your mobile phone.
- B. If with SD card, the device recording automatically and save the videos to SD card, and it also saved the recordings to your mobile phone as well.
