PAC TR4 Programmable Universal Trigger Module Instructions

Instructions

Description

The TR4 Universal trigger module accepts a voltage as low as 0.8V and provide a 1 second delay, then provides a 12V turn-on lead. This accessory can be used to provide a delayed turn-on signal for virtually any installation need.

Wiring

- Yellow: Constant + 12V
- Black: Chassis ground
- Green: Low voltage input (+)
- Blue: +12V output

Introduction & Features

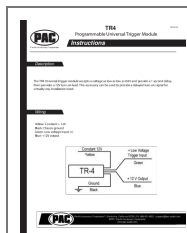

The TR4 is a module developed to monitor a low voltage signal and turn on once the signal rises to above 0.8V DC. This makes the TR4 ideal for turning on an aftermarket amplifier and/or other 12v accessory when only a lower voltage signal or speaker wire is available. The TR4 is equipped with a 1 second delay to prevent turn-on noise/pop. The module supplies a+ 12V 2 Amp output which can easily drive multiple amplifiers and/or a power antenna.

Installation:

TR4 Wire	Function	Connects To
Blue	+12V (2A) output	Amplifier's Remote or Power Antenna
Green	Low Voltage Trigger Input (+)	Speaker Wire
Black	Vehicle's Ground	Vehicle's Ground
Yellow	Vehicle's Constant +12v	Vehicle's Constant +12v
