CC-4 Chain Checker

Product Information: CC-4 Chain Checker

The CC-4 Chain Checker is a go no-go gauge designed to accurately indicate when a chain reaches 0.5% and 0.75% wear, the points at which most manufacturers suggest replacement. A worn chain shifts poorly and wears sprockets at an accelerated rate. The product is manufactured by Park Tool Co., located in St. Paul, MN, USA.

Instructions:

1. Lower the CC-4 onto the chain while keeping the gauge tip above the chain (Figure 1).
2. Apply and maintain tension on the chain at the location shown in Figure 2.

Note: It is crucial to maintain pressure on the chain in order to obtain an accurate reading.

3. While maintaining tension on the chain, push the chain onto the gauge tip to determine if the chain is worn (Figure 3).

CC-4 Chain Checker

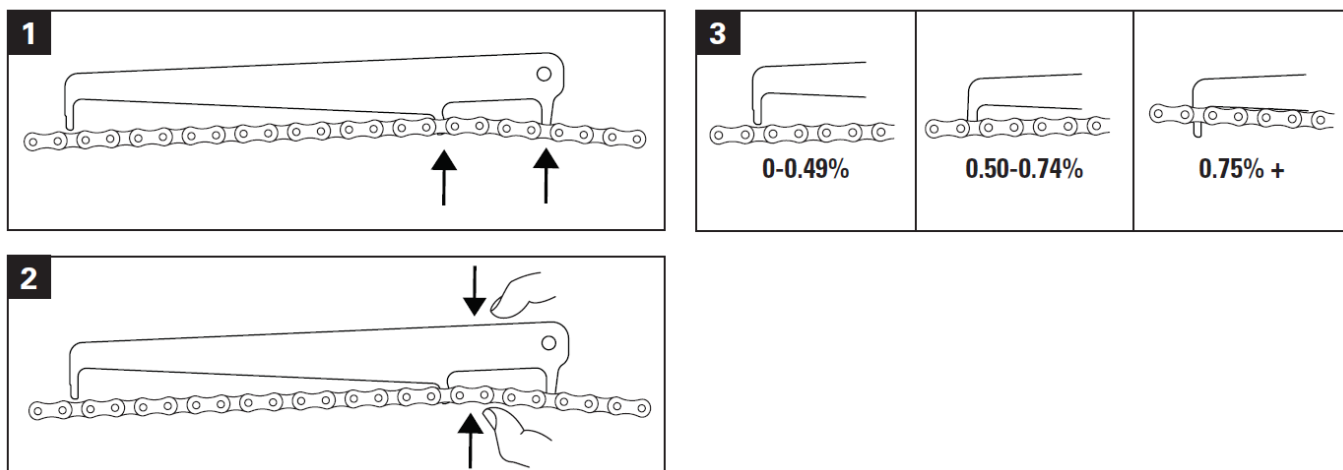

A worn chain shifts poorly and wears sprockets at an accelerated rate. The CC-4 is a “go no-go” gauge designed to accurately indicate when a chain reaches 0.5% and 0.75% wear, the points at which most manufacturers suggest replacement (contact the chain manufacturer for specific replacement recommendations).

INSTRUCTIONS

1. Lower the CC-4 onto the chain while keeping the gauge tip above the chain (Figure 1).
2. Apply and maintain tension on the chain at the location shown in Figure 2.

Note: It is crucial to maintain pressure on the chain in order to obtain an accurate reading.

3. While maintaining tension on the chain, push the chain onto the gauge tip to determine if the chain is worn (Figure 3).
