## PARYA Y-Disk Flash Drive User Manual

## Instructions

The flash drive should be used in conjunction with the Y-DISK app, which makes file transfer much easier and safer. Use the external storage to create more free space on your IOS/Android device. The 4-in-1 connector is designed to get rid of the USB cable, and iTunes, and iCloud easily switch between different devices. The flash drive is compatible with IOS/Mac/Windows/Android and supports almost all photos, videos, music, and documents. Even better, it allows you to use Touch ID/password to protect your essential files.

## Installation

- For PC: Simply connect the USB port to your computer or laptop.
- For iOS: Find “Y-DISK” in the App Store and download and install the App.
- Attention: the app is necessary: without the app, the flash drive cannot be used
- For Android: No app needs to be installed, a pop-up will appear in your notification center.
- Go to “My files” to find the flash drive.
- Caution: press the flash drive firmly into your socket, your protective cover may need to be removed.
- In some cases, you should hear a click.

1. USB-C is the connection for the newest generation of smartphones.
2. USB can be used for your desktop, laptop, or television. However, files can only be shown on your television if it can process the file type.
3. Press on the USB connection to open it. You now have access to your connection for your Android device and iOS device.

**If this is not the case, follow the steps below:**

1. Find the other settings in your Android phone (devices) and open the OTG connection before use.
2. Connect the micro-USB port to your Android phone (devices) and open the file management folder.
3. Open all your files and locate the OTG storage zones, where you can edit your files freely.

**Basic Features**

- Press and hold the “file explorer” button to select files to encrypt, click on the “location icon” at the bottom, and set your password, the files will automatically be saved in the “security folder”.
- Click on the camera icon at the top left to record photos and videos directly.
- Long press the compressed file and click decompression to view your compressed file.
- Open “my” video support for all video formats, playback, and insert subtitle files.
- On the “my” page, long press to select photos, videos, music, and documents you want to transfer, and click on the bottom left corner to copy them to the USB app or smart Phone.
- Open the backup page to backup/restore contacts and photos and export them.

**Tips**

- DO NOT remove the flash drive during export.
- Be patient with the connection. If you cannot connect to your devices, try again.
- **CAUTION**, insert the flash drive correctly into your device.
- Download only safe videos, pictures, and files from the Internet to the Flash Drive. This is to avoid the case of spreading viruses or Trojan horses.
