FAQ

- Q: Why does the screen prompt that there is no signal after connection, and the indicator light is red?
- Answer: When connecting to the mobile phone and prompting that there is no signal, please confirm whether the notification bar of the mobile phone prompts screen mirroring or screen sharing, if not, please confirm whether the mobile phone supports it screen projection; when connected with a USB- When connecting to the computer, it prompts that there is no signal, please confirm whether the Type-C interface supports video transmission; when connecting to HDMI set up When the device prompts that there is no signal, please restart the computer and try. If still unsuccessful, please contact your retail dealer or Service center.
- Q: What should I do if the displayed image has ripples and flickering?
- A: Make sure the wires between the display and the connected device are properly connected; remove any electronic devices that may cause electrical interference.
- Q: What should I do if there is discoloration (distortion/fading) on the screen?
- A: Check the cable to make sure all the pins are aligned correctly; replace the cable.
- Q: Why is the display flickering?
- A: If the screen is flickering, please check the power supply. It is recommended to use support 18W or higher wattage power adapter to power the display. If the power Often and the screen flickers, please contact the retail dealer or Service center.
- Q: Why can't I use the touchscreen function?
- Answer:
 - A. Please check whether the purchased model has touch screen function
 - B. Please check Windows Whether the laptop under the system can use the touch screen function.
 - C. Nintendo Switch/PS4 or other game devices do not support the extended screen to use the touch screen function.
 - D. When connecting to a mobile phone, please make sure that the system and version of the device support the third-party screen first.
 - E. Touch screen function, please refer to the specific model description.
- Q: What kind of panel is used for the display?
- A: This is an IPS panel. Due to the use of liquid crystal molecules in PS screens to obtain better viewing angles while reducing light penetration for better display, Therefore, the illuminance of the backlight source is also improved. As a result, backlight leakage is a common phenomenon on all LCDs, these areas of light are usually along the Edges or corners appear. This method will make IPS lose the high contrast ratio, while the static contrast ratio of AV screen can easily reach 5000:1
- Q: How do I submit a warranty claim?
- Answer: Please keep the warranty card properly. For quality-related issues, we provide one one-year warranty. Before submitting a warranty claim, please refer to the product-specific See FAQ and try all troubleshooting suggestions. If you believe this product is
- defective and it is under warranty, please contact us to obtain more help.
- Q: Why can't my Samsung single-line connection (US version) phone switch to Samsung Dex model?
- to an external power source before connecting the screen to the phone (PD 15W~20W or higher).

Safety Instructions

To ensure your safety and proper operation of all components, the following instructions should be followed for

installation, operation, and maintenance :

- To avoid the risk of fire or electric shock, do not expose this product to rain or moisture.
- Before proceeding, please make sure that all wires are properly connected and that the power cord is not damaged. If a defect is found, please contact your retail dealer or After Sales Service Center for all warranty claims.
- Do not expose the device to dust, moisture, and extreme temperatures. Do not use the device near water or in wet locations. Place the device on a flat on flat surface.
- Do not insert any foreign objects or spill liquid on the display
- Please use the power cord supplied with the display. If using a third-party power cord, please ensure that it complies with all relevant national standards . If the power cord is damaged, Please contact retail dealer or Service center.
- The display supports six input voltages: 5 V/9V/12W/15V/19V/20V. We recommend that you use a standard power adapter with these voltage sources or other USB Interface power.
- Do not use the output power lower than 10 w charger. If you want to charge multiple devices, please use different power adapters according to the related devices. Please contact your retail dealer or The after-sales service center understands the required specifications.
- Do not open the device or attempt to disassemble the internal parts or modify it in any way. This device contains no user – serviceable parts. if any failure, please contact the retail dealer or Service center.

To ensure personal safety, please follow the guidelines below

- Do not place the monitor on an inclined surface unless safety measures are taken .
- Do not drop or throw objects/toys on the display, otherwise, it may cause injury, product damage, and screen damage.

To avoid fire and other injuries, follow these guidelines

- If you leave the desktop for a long time, please turn off the power of the display.
- Do not let children throw objects at the ports of the display, or insert anything into the ports of the display.
- Do not install accessories that are not specially designed for your display.
- If you do not use the display for a long time, please unplug the power cord.
- During thunder and lightning, please do not touch the power line and signal line, otherwise it may cause electric shock.
- Do not press or twist the power cord. Do not place the display where it may damage the power cord.
- If you encounter any technical problems while using this device, please contact a service technician or retailer.

To prevent damage to the display, follow these guidelines

- Do not place the display in a place where it is easy to drop.
- Do not place the display near radiators or heat sources.
- Do not rub the screen panel with any hard objects, otherwise the LCD will be scratched or permanently damaged.
- LCD screen with fingers for a long time, otherwise the screen may be damaged.

- Do not press the screen frame hard, especially the narrow three sides, otherwise the LCD panel may be deformed.
- Red, green, and blue pixels may appear on the screen, but it does not affect the display function.
- Please use the recommended resolution for best results. If you use a non-recommended resolution, it may cause problems due to the LCD screen being fixed at a certain resolution causing abnormal display.
- If you pause the screen for too long, it may damage the screen and cause afterimages. Make sure to use a screensaver. Image retention and related issues are not covered by the product warranty inside.

Maintenance and Cleaning

clean:

- Turn off the display and unplug the power cord. Clean the display surface with a non-abrasive cloth, and dampen the cloth with a mild detergent before wiping away stubborn stains.
- Do not use cleaners containing alcohol or acetone. Please use LCD special cleaner , do not spray the cleaner directly on the screen, because the cleaner may Penetrate the display and cause electric shock. The following are normal conditions:
- You may notice slight uneven brightness across the screen, or it may be related to the desktop wallpaper pattern you are using
- When switching images after displaying the same image for several hours, after images may appear on the screen. The screen will slowly return, or you can turn off the source for several hours.
- When the screen becomes dark or flickering or cannot be used, please contact the retail dealer or after-sales service center for repair, do not repair by yourself.
