rapoo VT350C Wired/Wireless Gaming Mouse User Guide

Overview

A Right button

installation

To customize the gaming mouse for each operation, please download the software from www.rapoo.com.

DPI adjustment

(I) You can switch DPI values among 5 levels which is up to 5000 DPI. The backlight color changes when you press the DPI button. If the current level is the seventh, pressing the DPI button will switch to the first level.

Trouble shoring

How to turn off the backlight? You can set the backlight mode by driver, turn on or off the backlight.

Why does the cursor drift appear when I set the reporting rate to above 125Hz? The algorithm of enhanced pointer precision is not suitable for Windows systems.

To ensure you can use your mouse normally, please take the following steps:

1. Open the “control panel”;
2. Click the “Mouse” icon;
3. Select the “Pointer Options”;
4. Disable the “Enhanced pointer precision” option.

warranty

The device is provided with two-year limited hardware warranty from the purchase day. Please see www.rapoo.com for more information.
