Save

Your router is already set up here, wait about 1 minute, please reconnect your WiFi name.

Access Point Mode

In this mode, the router transforms your existing wired network to a wireless one.

- Power on the router.
- Connect the router's WAN port to your wired router's Ethernet port via an Ethernet cable as shown above.
- Connect a computer to the router via an Ethernet cable or wirelessly by using the SSID (network name)
- Launch a local IP and enter 192.168.16.1 in the address bar and default user account password: admin printed on the label at the bottom of the router.

- Click Next to start the Easy Setup. Select Access Point and follow the step-by-step instructions of the Easy Setup to set up the internet connection.

Enjoy the internet!

Note: Using this AP Mode, this router IP address is synchronized to the address of the superior router .

WISP Mode

In this mode, the router boosts the existing wireless coverage in your home.

Configure

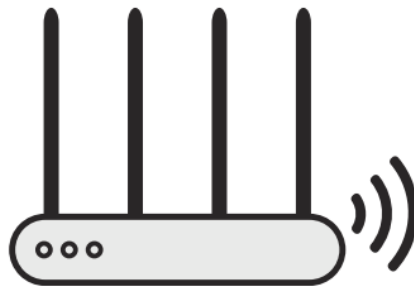

- Place the router next to your host router and power it on.
- Connect a computer to the router via an Ethernet cable or wirelessly by using the SSID (network name)
- Launch a web browser and enter 192.168.16.1 in the address bar and default use account password: admin printed on the label at the bottom of the router.
- Click Next to start the Quick Setup. Select Range Extender and follow the step-by-step instructions to set up the internet connection.

Relocate

Place the router about halfway between your host router and the Wi-Fi “dead” zone. The location you choose must be within the range of your existing host network.

Public Wi-Fi

Router

Devices

Enjoy the internet!
