How to connect VMS on PC

VMS download URL: <https://download.xm030.cn/d/MDAwMDE0OTM=>

1. Open VMS, Click "SIGNIN"

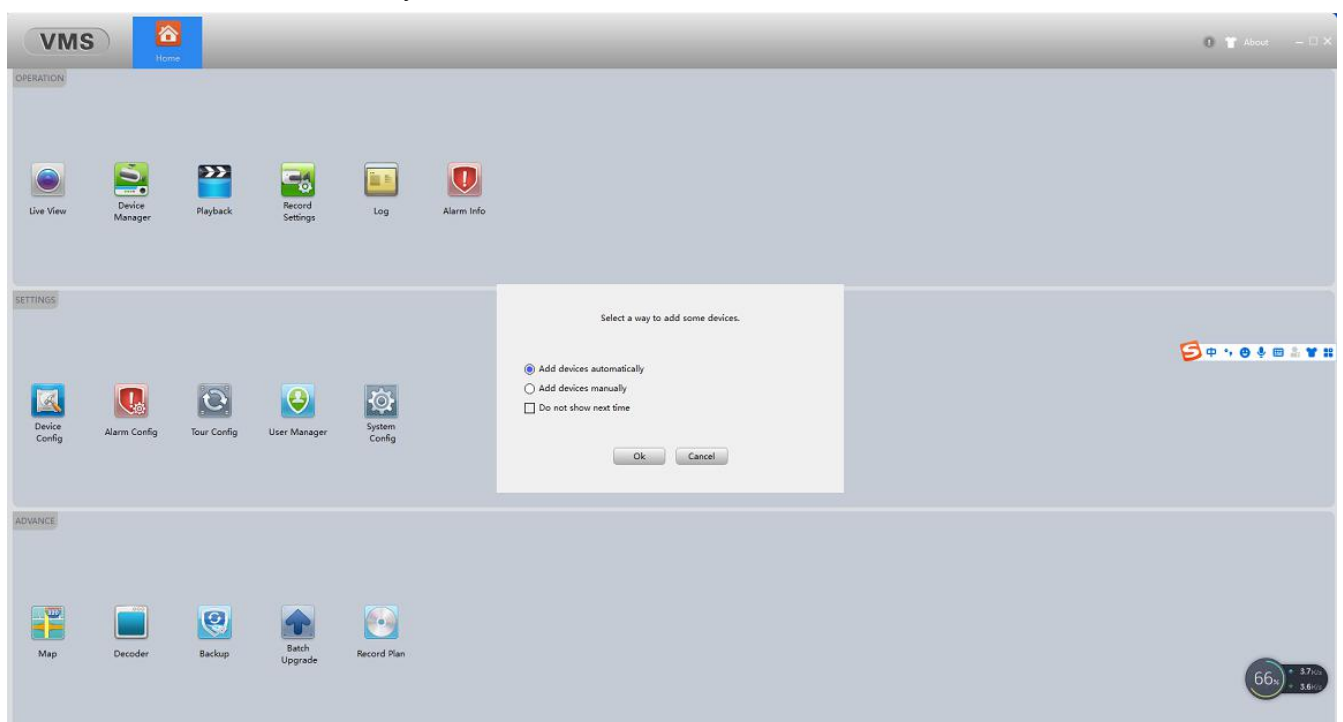

The image shows a login window for a VMS (Video Management System). The window has a title bar with the text "VMS". Below the title bar, there are two input fields: "UserName:" with the text "admin" and "Password:" with five dots. Below the password field, there is a checkbox labeled "Remember Password" which is checked. At the bottom of the window, there are two buttons: "SIGNIN" and "CANCEL".

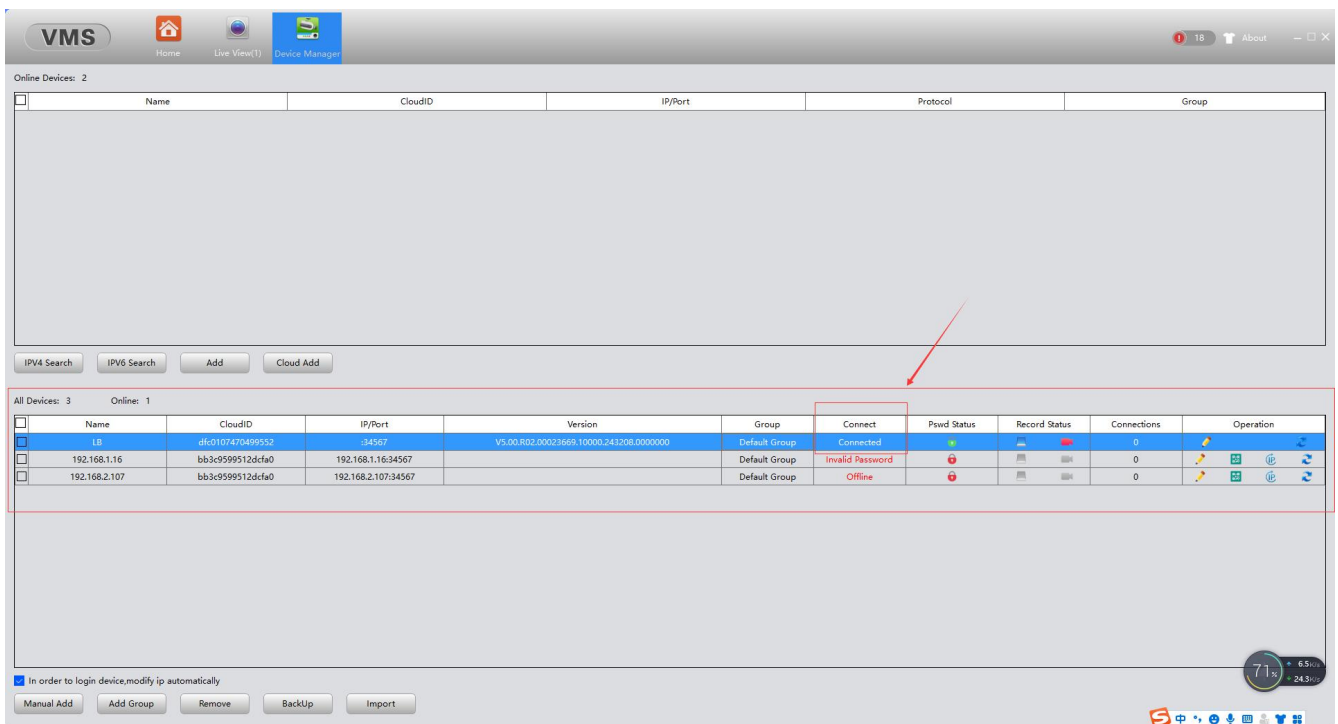

Note:

User Name and Password are default, you no need to fill anything.

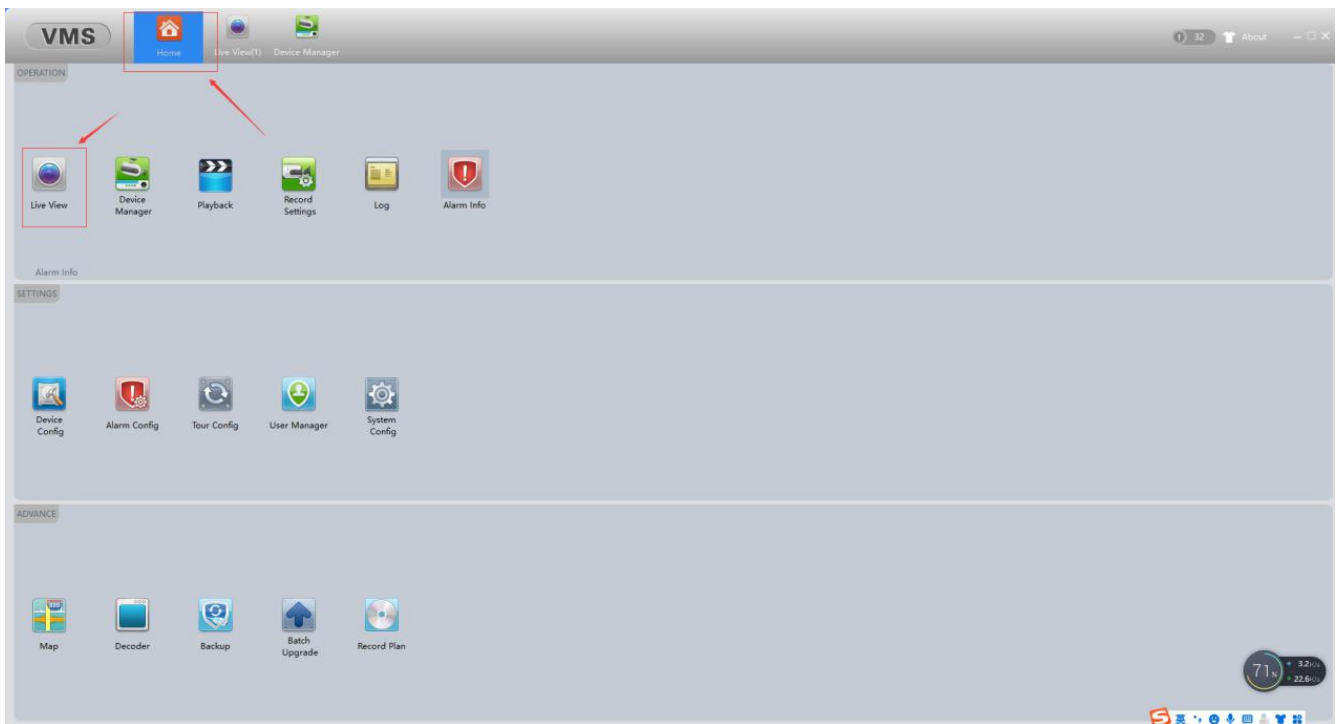

2. Choose "Add device automatically", then click "ok".

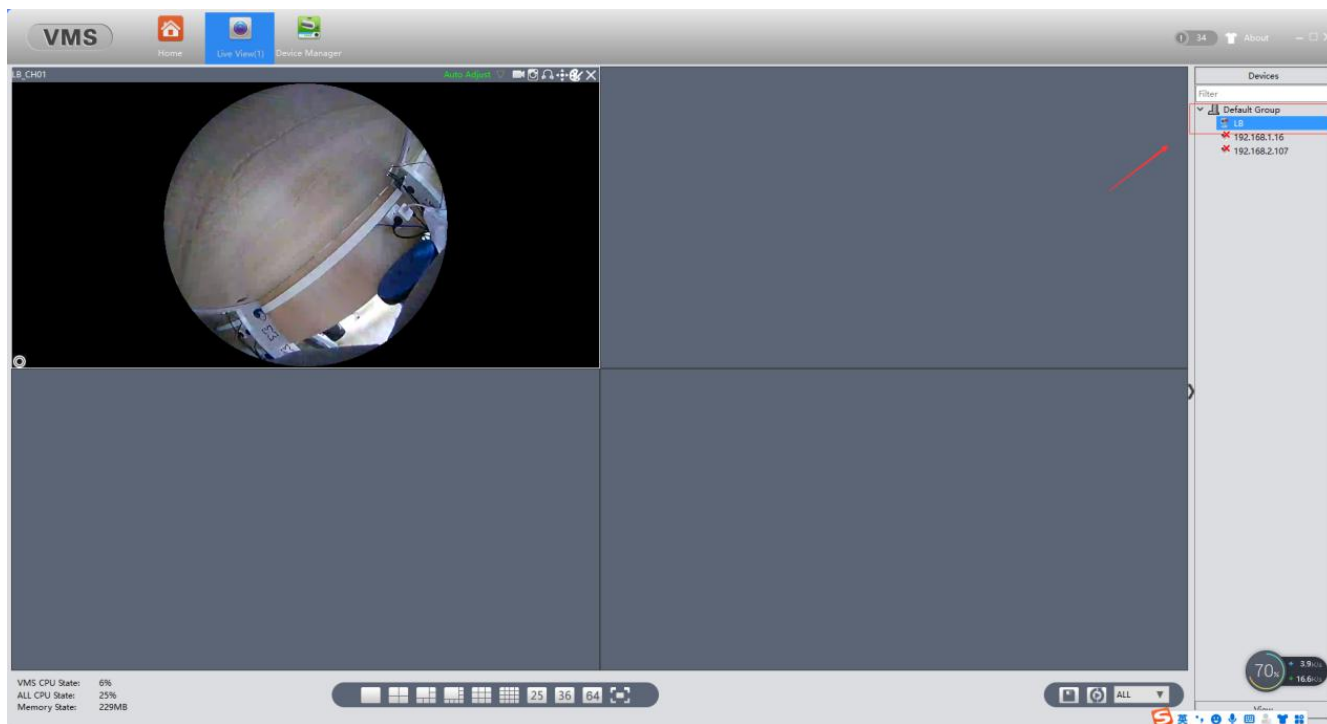

3. By searching for the camera ip automatically, the following cameras will appear, please confirm that your camera is searched and it shows that the connection is successful.

4. After the camera is connected successfully, please return to the “Home” and click “live view” to view your camera.

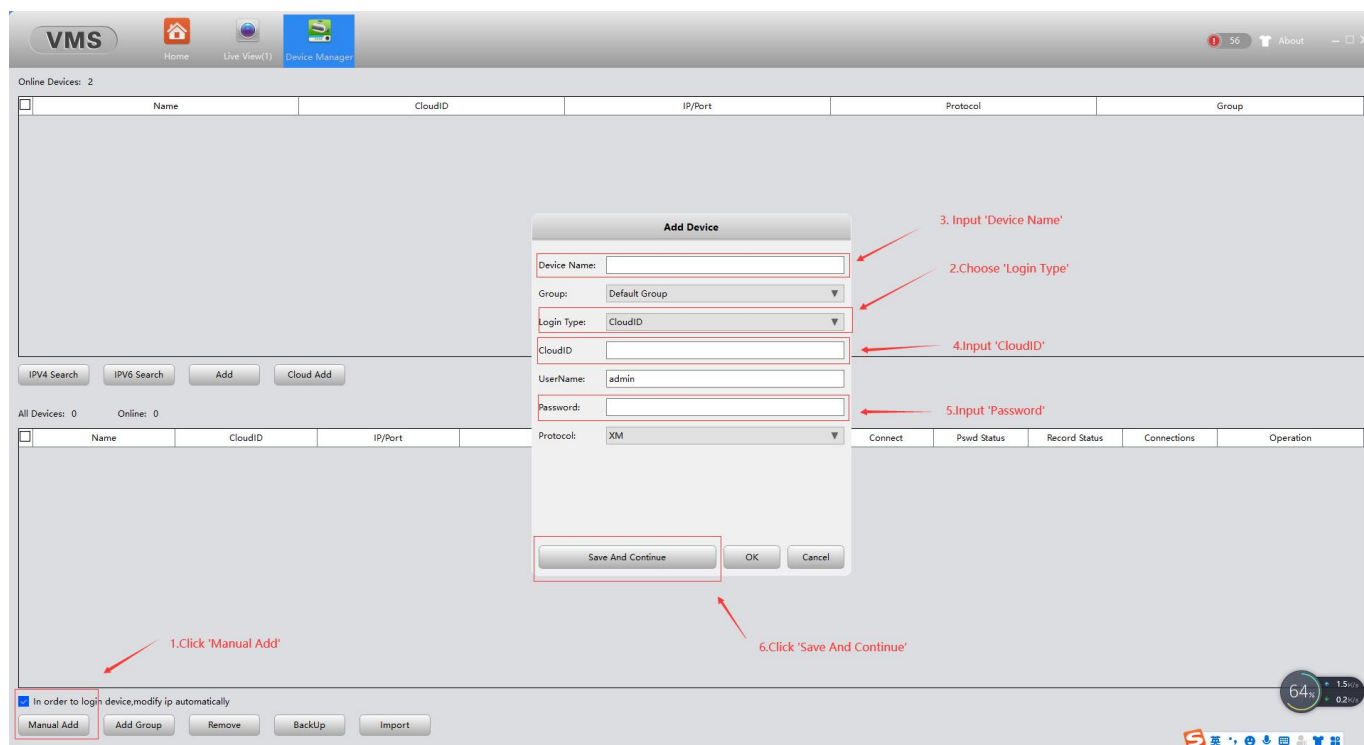

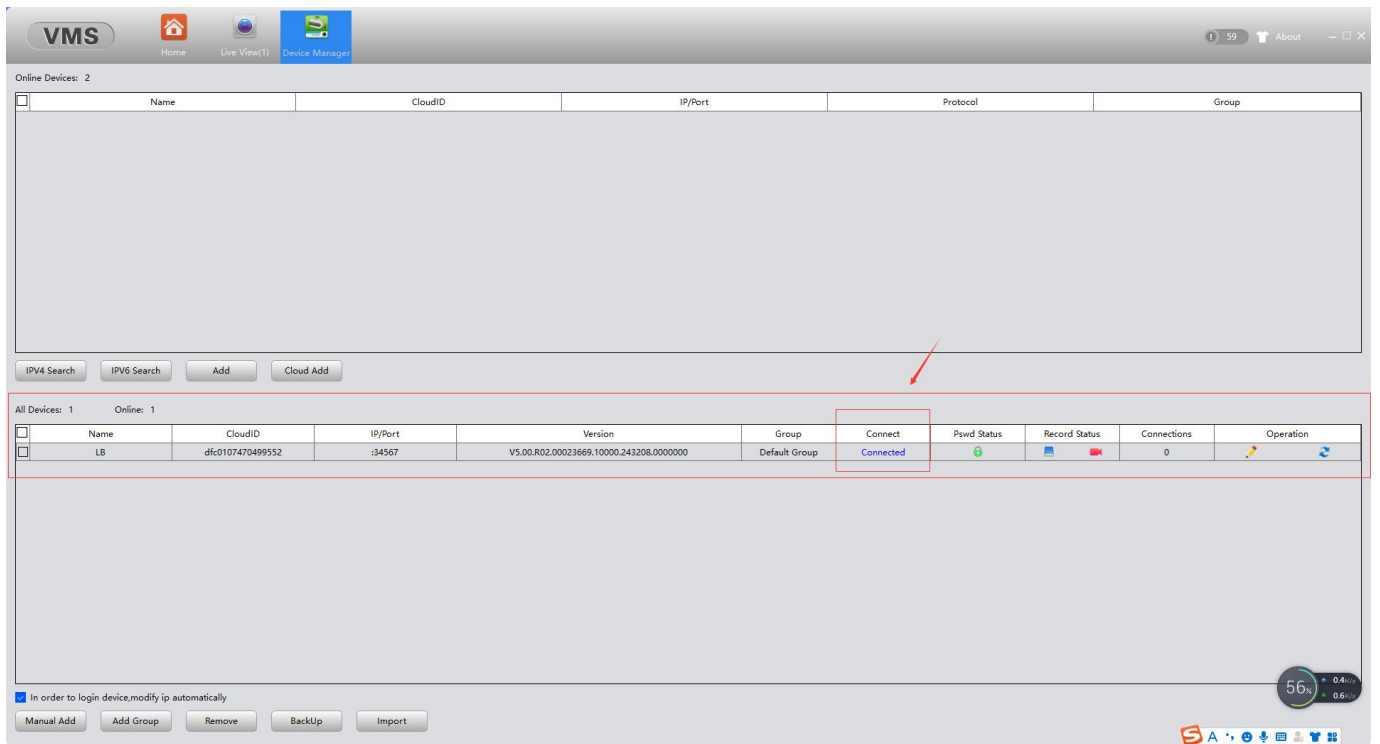

5. Please find your connected camera in the upper right corner, and click it, your camera will be displayed on the page, as shown in the picture.

What should I do if vms does not find my camera ip?

If vms does not search the camera ip, please refer to the following method

1. Please note:

This way must connect the camera to the phone first, so that obtain the camera's serial number and password.

2. How to get serial number:

Enter iCSee-click 'settings'-click 'about'-Copy the serial number to other input boxes to view the complete serial number.

3. How to get password:

The password you can get when you connected the camera.
