Removal on macOS

- Close your DAW
- Manually delete the Rhodes plug-in files in the following locations (make sure you can see hidden files and folders on your system):

Main Plugin Content	Macintosh HD:/Library/Application Support/Rhodes/
AU	Macintosh HD:/Library/Audio/Plug-Ins/Components/
VST2	Macintosh HD:/Library/Audio/Plug-Ins/VST/Rhodes/

GarageBand	WHILE HOLDING OPTION KEY: MacintoshHD:/Users/USERNAME/Library/Containers/com.apple.garageband10/Data/Library/Application Support/Rhodes/

Note: *'Macintosh HD:/Users/USERNAME'* can be abbreviated as '~'. Also, 'Macintosh HD' is system-dependent and is not part of the actual path

- If you are using custom locations for your files, like for example the plugin content (.blob), please check your custom folders and remove the files manually.
- Restart your Mac.

CodeMeter

- Open the Support & Downloads section of the Wibu-Systems website and download the CodeMeter User Runtime file.
- Open the downloaded CmRuntimeUser*.dmg disk image.
- Start the program CmUninstall. Follow the instructions of the wizard.

Caution: CodeMeter is also used by other software that you might have installed on your computer. Removing CodeMeter will remove any associated licenses.

Gorilla Manager

- Drag the Gorilla Manager from the Applications folder to the trash.
