Ring Smoke/CO Listener 4SS1S80EN0 Manual

Contents

Ring

Ring Smoke/CO Listener

SKU: 4SS1S80EN0

Quickstart

This is a
secure
Alarm Sensor
for
U.S. / **Canada** / **Mexico**.

Please make sure the internal battery is fully charged.

To add this device to your network execute the following action:
Inclusion Instructions -Begin the setup process near your Ring Alarm Base Station.In the Ring app, tap Set Up a Device. Choose Security Devices, then Sensors,then Ring Smoke/CO Listener, then tap Add Device.To complete the setup process, follow the in-app instructions.When prompted, scan the QR Code or enter the PIN.This begins the pairing process. The QR Code and PIN are on the back of your Listener and in the product packaging.When prompted, pull out the clear tab.This turns the Listener on. Your Alarm Base Station then finds it automatically.As the Listener pairs to your Alarm Base Station, its LED ring blinks slowly, then quickly. Once it pairs, the LED glows blue for three seconds.

Please refer to the
Manufacturers Manual for more information.

Important safety information

Please read this manual carefully. Failure to follow the recommendations in this manual may be dangerous or may violate the law.
The manufacturer, importer, distributor and seller shall not be liable for any loss or damage resulting from failure to comply with the instructions in this manual or any other material.
Use this equipment only for its intended purpose. Follow the disposal instructions.

Do not dispose of electronic equipment or batteries in a fire or near open heat sources.

What is Z-Wave?

Z-Wave is the international wireless protocol for communication in the Smart Home. This device is suited for use in the region mentioned in the Quickstart section.

Z-Wave ensures a reliable communication by reconfirming every message (**two-way communication**) and every mains powered node can act as a repeater for other nodes (**meshed network**) in case the receiver is not in direct wireless range of the transmitter.

This device and every other certified Z-Wave device can be **used together with any other certified Z-Wave device regardless of brand and origin** as long as both are suited for the same frequency range.

If a device supports **secure communication** it will communicate with other devices secure as long as this device provides the same or a higher level of security. Otherwise it will automatically turn into a lower level of security to maintain backward compatibility.

For more information about Z-Wave technology, devices, white papers etc. please refer to www.z-wave.info.

Product Description

Ring Smoke/CO Listener is a smart sound sensor for Ring Alarm. This sensor listens for the alarm sound of a smoke and/or CO detector. It does not sense smoke or CO directly. Instead, it adds smart functionality to your existing smoke or CO alarm (or smoke/CO combo).When your smoke or CO alarm begins to sound, the Smoke/CO Listener activates and Ring Alarm notifies you of the issue, wherever you are. If your system is professionally monitored, our monitoring center is also notified.

Prepare for Installation / Reset

Please read the user manual before installing the product.

In order to include (add) a Z-Wave device to a network it **must be in factory default state.** Please make sure to reset the device into factory default. You can do this by performing an Exclusion operation as described below in the manual. Every Z-Wave controller is able to perform this operation however it is recommended to use the primary controller of the previous network to make sure the very device is excluded properly

from this network.

Reset to factory default

This device also allows to be reset without any involvement of a Z-Wave controller. This procedure should only be used when the primary controller is inoperable.

Reset Instructions – To factory reset, press and hold the Setup button for 10 seconds. When the LED ring stops blinking, your Listener has reset.This process disconnects the Listener from Ring Alarm. To begin using the Listener again, repeat the setup process in the Ring app.Note: Please use this procedure only when the network primary controller is missing or otherwise inoperable.

Inclusion/Exclusion

On factory default the device does not belong to any Z-Wave network. The device needs to be **added to an existing wireless network** to communicate with the devices of this network. This process is called **Inclusion**.

Devices can also be removed from a network. This process is called **Exclusion**. Both processes are initiated by the primary controller of the Z-Wave network. This controller is turned into exclusion respective inclusion mode. Inclusion and Exclusion is then performed doing a special manual action right on the device.

Inclusion

Inclusion Instructions -Begin the setup process near your Ring Alarm Base Station.In the Ring app, tap Set Up a Device. Choose Security Devices, then Sensors,then Ring Smoke/CO Listener, then tap Add Device.To complete the setup process, follow the in-app instructions.When prompted, scan the QR Code or enter the PIN.This begins the pairing process. The QR Code and PIN are on the back of your Listener and in the product packaging.When prompted, pull out the clear tab.This turns the Listener on. Your Alarm Base Station then finds it automatically.As the Listener pairs to your Alarm Base Station, its LED ring blinks slowly, then quickly. Once it pairs, the LED glows blue for three seconds.

Exclusion

Exclusion Instructions – to remove Ring Smoke/CO Listener from your system:Open the side menu in the Ring app and tap Devices, then Base Station. Next, select your Listener and tap the gear- shaped icon. Then tap Remove Device.When prompted, open the Listener and remove and reinstall the battery to complete the removal.

Communication to a Sleeping device (Wakeup)

This device is battery operated and turned into deep sleep state most of the time to save battery life time. Communication with the device is limited. In order to communicate with the device, a static controller **C** is needed in the network. This controller will maintain a mailbox for the battery operated devices and store commands that can not be received during deep sleep state. Without such a controller, communication may become impossible and/or the battery life time is significantly decreased.

This device will wakeup regularly and announce the wakeup state by sending out a so called Wakeup Notification. The controller can then empty the mailbox. Therefore, the device needs to be configured with the desired wakeup interval and the node ID of the controller. If the device was included by a static controller this controller will usually perform all necessary configurations. The wakeup interval is a tradeoff between maximal battery life time and the desired responses of the device. To wakeup the device please perform the following action:

The sensor will wake up every so often and when the case is closed to send a Wake-Up Notification to allow the

life line master node controller that the sensor is now available for any queued messages that the controller may have for the sensor. The time between Wake-Up Notifications can be configured with the Wake-Up Notification command class to be between 1 and 24 hours with interval steps of 1 minute.

Quick trouble shooting

Here are a few hints for network installation if things dont work as expected.

1. Make sure a device is in factory reset state before including. In doubt exclude before include.
2. If inclusion still fails, check if both devices use the same frequency.
3. Remove all dead devices from associations. Otherwise you will see severe delays.
4. Never use sleeping battery devices without a central controller.
5. Dont poll FLIRS devices.
6. Make sure to have enough mains powered device to benefit from the meshing

Association – one device controls an other device

Z-Wave devices control other Z-Wave devices. The relationship between one device controlling another device is called association. In order to control a different device, the controlling device needs to maintain a list of devices that will receive controlling commands. These lists are called association groups and they are always related to certain events (e.g. button pressed, sensor triggers, …). In case the event happens all devices stored in the respective association group will receive the same wireless command wireless command, typically a 'Basic Set' Command.

Association Groups:

Group NumberMaximum NodesDescription

1	5	Z-Wave Plus Lifeline

Configuration Parameters

Z-Wave products are supposed to work out of the box after inclusion, however certain configuration can adapt the function better to user needs or unlock further enhanced features.

IMPORTANT: Controllers may only allow configuring signed values. In order to set values in the range 128 … 255 the value sent in the application shall be the desired value minus 256. For example: To set a parameter to 200â€ît may be needed to set a value of 200 minus 256 = minus 56. In case of a two byte value the same logic applies: Values greater than 32768 may needed to be given as negative values too.

Parameter 1: Unsolicited Battery Report

255 to 4200 seconds in 255 second increments that the sensor should wait between sending unsolicited battery reports.
Size: 2 Byte, Default Value: 4200

SettingDescription

255 – 4200	255 to 4200 seconds in 255 second increments that the sensor should wait between sending unsolicited battery reports.

Parameter 2: hear CO Detectors

1: Smoke Detector Siren2: Smoke+CO Detector Siren
Size: 1 Byte, Default Value: 1

SettingDescription

1 – 2	1: Smoke Detector Siren 2: Smoke+CO Detector Siren

Parameter 3: Installation Test

0: Cancel Installation Test Mode1: Start Installation Test Mode
Size: 1 Byte, Default Value: 0

SettingDescription

0 – 1	0: Cancel Installation Test Mode 1: Start Installation Test Mode

Technical Data

Hardware Platform	ZM5101
Device Type	Notification Sensor
Network Operation	Reporting Sleeping Slave
Firmware Version	HW: 1 FW: 10.01
Z-Wave Version	6.81.00
Certification ID	ZC10-19016343
Z-Wave Product Id	0x0346.0x0601.0x0101
Color	White
Supported Notification Types	CO AlarmSmoke Alarm
Firmware Updatable	Updatable by Consumer via Internet
Security V2	S2_UNAUTHENTICATED ,S2_AUTHENTICATED
Frequency	XXfrequency
Maximum transmission power	XXantenna

Supported Command Classes

- Association Grp Info
- Association V2
- Battery
- Configuration
- Device Reset Locally
- Firmware Update Md V4
- Manufacturer Specific V2
- Notification V8
- Powerlevel

- Security 2
- Supervision
- Transport Service V2
- Version V3
- Wake Up V2
- Zwaveplus Info V2

Explanation of Z-Wave specific terms

- **Controller** — is a Z-Wave device with capabilities to manage the network.
  Controllers are typically Gateways,Remote Controls or battery operated wall controllers.
- **Slave** — is a Z-Wave device without capabilities to manage the network.
  Slaves can be sensors, actuators and even remote controls.
- **Primary Controller** — is the central organizer of the network. It must be
  a controller. There can be only one primary controller in a Z-Wave network.
- **Inclusion** — is the process of adding new Z-Wave devices into a network.
- **Exclusion** — is the process of removing Z-Wave devices from the network.
- **Association** — is a control relationship between a controlling device and
  a controlled device.
- **Wakeup Notification** — is a special wireless message issued by a Z-Wave
  device to announces that is able to communicate.
- **Node Information Frame** — is a special wireless message issued by a
  Z-Wave device to announce its capabilities and functions.
