Ruko F11GIM Drone

• Age Recommendation: 14+

· Version: v2.0

Product Information

The RUKO DRONE is a high-performance drone designed for users aged 14 and above. It features advanced functionalities and a user-friendly design to provide an exciting flying experience.

Product Usage Instructions

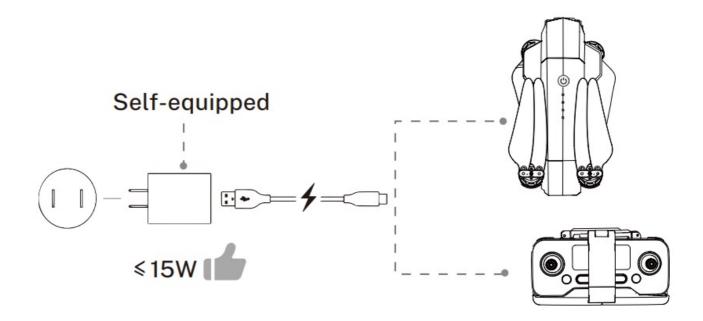

Download App

Download the RUKO DRONE app from the App Store for iOS devices or the Google Play Store for Android devices.

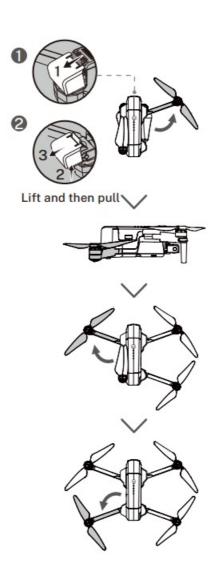

Charge the Batteries:

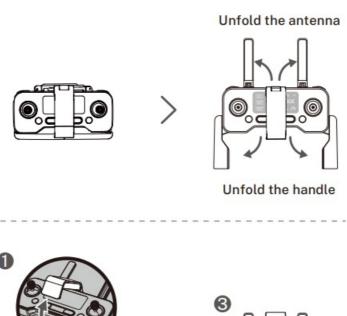

Ensure the drone batteries are fully charged before use.

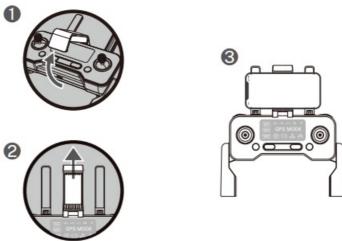

Setup:

- 1. Lift and pull to unfold the drone.
- 2. Unfold the antenna and handle.

Select an Open Flight Area

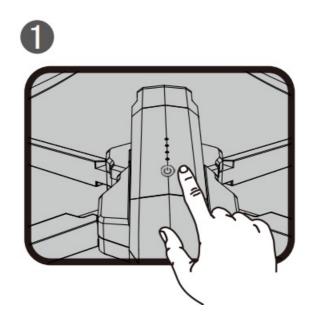

Choose a clear, open area for safe flight.

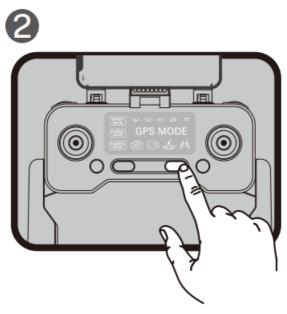

Power On

- 1. Press and hold the button on the drone until it plays the startup sound.
- 2. Short-press to power on the transmitter after turning on the drone.

Note: Please turn on the Aircraft firstly, then the Transmitter. Otherwise, they will not be paired.

Connect to Wi-Fi

Connect your mobile device to the drone's Wi-Fi and enter the app operation page for further instructions.

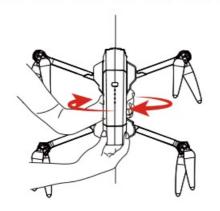

7. Calibration and Pre-flight Checks:

- Calibrate the compass and gyroscope as per the instructions provided.
- Ensure GPS signal is strong before takeoff.

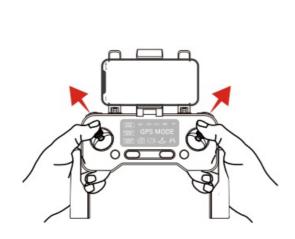

Rotate the aircraft horizontally 360°.
 (About 1-2 turns)

Rotate the aircraft vertically 360°.
 (About 1-2 turns)

Calibrate the Gyroscope

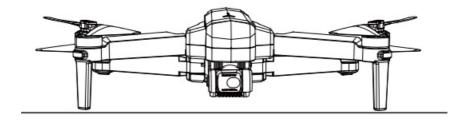

Push joysticks to 11 & 1 o'clock position. (About 2 seconds)

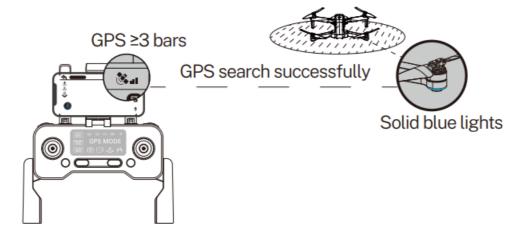

Gimbal Self-inspection

Put on a level surface. (About 20 seconds)

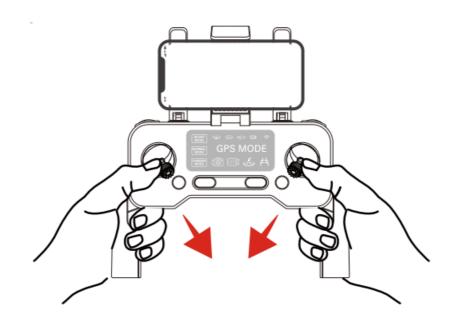

Search for GPS Automatically

1. Tips: 1. The searching time depends on the flight environment. 2. If unsuccessful, the motors can't be started.

Start the Motors

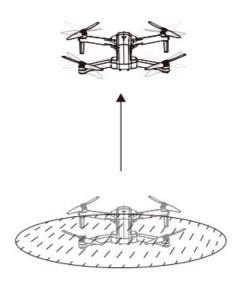

Push joysticks to 5 & 7 o'clock position. (About 2 seconds)

Take Off

Push up the left stick to start the motors and lift off.

Flight Guide and Support

Refer to the in-app flight guide for additional assistance. For technical support, contact RUKO via email or phone.

Common Problems and Solutions

Question	Reason	Solutions
The motors cannot be started	Weak GPS signal	Turn on the Aircraft in an open area with str ong GPS signal
		The Aircraft has low battery. Please
	The red light stays on	charge the battery in time
	The pink light stays on	The compass is not calibrated. Please refe r to the "Calibration Before Flight" section o f the User Manual
	The left and right joystick are n ot in place	Push the left and right joysticks simultaneo usly to 5 o'clock and 7 o'clock for
		2 seconds
	Thing too love offers to the A'	Please fly the Aircraft above 9.84ft(3
	Flying too low, affected by Aircr aft airflow	meters)
	The gyroscope is not calibrated	Place the Aircraft on a horizontal surface a nd conduct gyroscope/horizontal calibratio n. Please refer to the "Calibration
		Before Flight" section of the User Manual
Unstable flight	The propellers become	
	deformed and incomplete	Replace the propellers with new ones
	GPS signal is unstable. Flying near buildings and in obstructe d places	Please fly the Aircraft in an open area free of obstacles within the circle of radius 32.8 1 ft(10 meters)
Out of control, spinning around on its own, abnormal sound	The Transmitter signal is interf ered or the Aircraft exceeds th e range of remote control	Please fly the Aircraft outdoors without inte rference, and ensure that it is within a contr ollable range
	Compass interference	Please manually land the drone in time an d calibrate the compass. Please make sure to fly away from the buildings, trees, power lines, and signal towers
	The propellers become	
	deformed and incomplete	Replace the propellers with new ones
	When Fly from the grass, the gi mbal touches the grass	Put the drone on landing pad or cardboard to prevent the gimbal from hitting with other objects
		other objects

	When fly from the wooden floor , vibration will be transmitted th rough the floor	Take off the drone from the place without vi brations
The Gimbal is not working	The gimbal is interfered by external forces or the drone is picked up during self-inspection	Put the Aircraft on the level ground without touching. The gimbal will star to work after 40 seconds
	When turning on the drone on the desk, the desk will amplify the subtle vibrations into high-frequency vibrations	Turn on the drone on the place without vibr ations
	The compass is in calibrating	Put the Aircraft on level ground after compass calibration. The gimbal will start t o work after 20 seconds

Question	Reason	Solutions
Video freezes, image transmissi on distance is short	The Aircraft is out of Wi-Fi rang	Fly the Aircraft within the range of the Wi-Fi
	WiFi image transmission signal interference	Fly the Aircraft in an unobstructed open are a free of buildings, high-voltage wires and signal towers
	The transmitter and the mobile phone are not pointed at the di rection of the drone	Point the Transmitter and the mobile device at the flying direction of the Aircraft to main tain the strongest signal connection
	Phone performance freezes	Close unused apps running in the background to maintain the best performan ce of the phone
Video is not clear	if use APP storage, the pixels a re 1920×720P	Insert the memory card and storage the vid eo on the memory card
	The phone is not connected to Wi-Fi	Connect your mobile device to the Wi-Fi : Ruko-GIM-*****
	The phone version is too low	Android 6.0 and above, IOS 10.02 and above
	When connecting to the	Set the Wi-Fi correctly
App does not display the interfac e	drone's WiFi, the network is n ot set or set incorrectly	Turn the phone to airplane mode
	VPN switch is turned on	Turn off the VPN switch
	Wrong app downloaded	Download the correct App
APP crashes or functions abnor mally	A few mobile phone versions a re old and incompatible with A PP	Provide mobile phone version and model, we will adapt and solve it
Phone cannot connect to Wi-Fi	It is the first time to connect yo ur phone to the Wi-Fi	Try connecting a few more times or restart the phone
	The phone is a single band	Use the dual band devices that support bot h 2.4 GHz and 5 GHz/5.8 GHz
The WiFi name is not displayed in the list	WiFi has not been activated	Wait for about 30 seconds after turning on the Aircraft and keep refreshing the Wi-Fi list while the Wi-Fi is activated
	Turning on the drone indoors	GPS signals cannot be found indoors. Plea se search for GPS signals in an open place outdoors
GPS signal is weak	Under the tree, next to the buil ding, in an obstructed place	Please stay away from obstacles for more t han 32.81 feet(10 meters), and search for GPS signals in an open area

Question	Reason	Solutions
Unable to return home, drifting a nd flying away	GPS signal was turned off duri	Please don't turn off GPS suddenly during outdoor flight. Switch back to GPS mode in time
App always says the Transmitter has low battery	The phone cannot connect to the Transmitter due to the wrong sequence for turning on the equipments	The correct sequence is: 1.Turn on the Aircraft firstly 2. turn on the T ransmitter 3. Connect the WiFi
The Aircraft cannot be paired wit h the Transmitter	The wrong sequence for turnin g on the equipments	Correct pairing steps: 1. Turn on the Aircraf t. 2. Turn on the Transmitter
	Using inferior charger or chargi ng on the computer with unstab le voltage output	Use a mobile USB charger that ensures constant stable voltage output(5V) and amperage output(2-3A)
Cannot charge battery/Cannot fully charge battery	Using inferior charging cables	Please use the original factory charging ca ble to charge
	Flying in windy weather	Flying in windy weather will accelerate power loss
Short battery life	Flying in cold weather	In low temperatures, the chemical reaction of the lithium battery is slowed down and the energy cannot be fully released
	The battery is not fully charged	Fully charged with the correct USB charger before flying
The product has slight marks	We tested all Aircraft before shi pping	In order to give you the best experience, we tested functions of all Aircraft before ship ping. Therefore, it is inevitable that there we ill be slight traces. However, it can be guar anteed that all Aircraft are 100% brand new

FAQ

Common Problems and Solutions:

Issue: Motors cannot be started Possible Reason: Weak GPS signal

Issue: Unstable flight

Possible Reason: Flying too low, affected by Aircraft airflow

Issue: Out of control, spinning around on its own, abnormal sound

Possible Reason: The Transmitter signal is interfered or the Aircraft exceeds the range of remote control

Issue: The Gimbal is not working

Possible Reason: The gimbal is interfered by external forces or the drone is picked up during self-

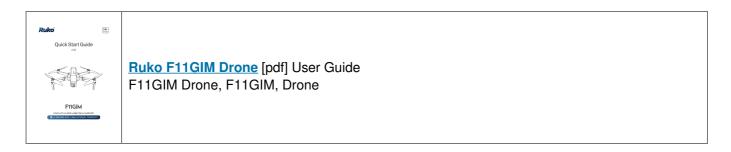

inspection
