Satel APT-200 Bidirectional Keyfob User Guide

Full manuals are available on www.satel.pl

Changes, modifications or repairs not authorized by the manufacturer shall void your rights under the warranty.

There is a danger of battery explosion when using a different battery than recommended by the manufacturer, or handling the battery improperly.

Be particularly careful during installation and replacement of the battery. The manufacturer is not liable for the consequences of incorrect installation of the battery.

The used batteries must not be discarded, but should be disposed of in accordance with the existing rules for environment protection.

For description of adding and configuring the keyfobs, refer to the ABAX 2 / ABAX system controller manual / INTEGRA 128-WRL control panel user manual.

Pressing the keyfob button will:

- generate a beep,
- turn on the buttons backlight (not applicable to APT-210),
- make the LEDs blink three times,
- send a radio transmission to the controller / alarm control panel.

If the button will be pressed for 20 seconds, the keyfob will turn off to save battery power.

After the transmission is sent, the keyfob is waiting for an answer from the controller / control panel. Having received the system state information, the keyfob will present it by means of LEDs. You can get information about the system state after pressing any button (the button does not have to start any function).
For more information about the keyfob, refer to the full manual.

Hereby, SATEL sp. z o.o. declares that the radio equipment type APT-200 / APT-210 is in compliance with Directive 2014/53/EU. The full text of the EU declaration of conformity is available at the following internet address: www.satel.pl/ce
