sellEton SL-700 Floor Scale

Instructions

Inside Scale:

- (1) Homerun Cable
- (1) Indicator w/ U-bracket
- (1) AC Adapter
- (1) Indicator manual
- (4) Screw in Feet

1. Carefully open box and remove the scale
2. Locate access compartment (Top or Side) and remove the screws
3. Remove all contents from the inside compartment

NOTE: any upgrades to the order will be shipped separately, ie. indicator w/battery

4. Route the homerun cable through the cable opening located inside the compartment near the underside of the scale
5. Close compartment latch with screws
6. Screw-in all 4 feet into the 4 load cells located on the underside of each corner
- NOTE:** Do not screw in too deep that it will touch the platform
7. Place scale on flat surface, if not level, lift scale slightly and adjust scale feet with a screwdriver through the feet access openings until the scale is stable
8. Connect the home run cable to the indicator
9. Plug the AC adapter to the indicator and power on the indicator
10. Once the indicator is powered on, the display will count down and show zero
11. To ensure your scale is level, place an item you know the weight of on each corner of the scale, if a corner varies, adjustments to the feet should be made
12. Your scale is ready for use (no calibration is needed)
13. If the weight is incorrect, calibration will be needed

NOTE: Please refer to your indicator manual for proper calibration steps

The thumbnail shows the cover of the user guide for the sellEton SL-700 & 800 Floor Scale. It features the sellEton logo at the top left, the model numbers 'SL-700 & 800' at the top right, and the title 'FLOOR SCALE USER GUIDE' below that. There are two images of the scale: one showing the top view and another showing the side view. A list of 15 numbered steps is visible on the left side of the cover, detailing the setup and operation of the scale.
