SENSOR PO13 Keypad Phone

Basic Information

Basic Description of Functions

Thank you for selecting the Element mobile phone with a colour display. While reading this manual, get familiar with the phone's operation, features and control method.

The mobile is designed to be used in a GSM/GPRS network environment and allows for using two SIM cards in the standard mode. While there is an ongoing call on one of the SIM cards, the other SIM is disabled. In addition to the basic call features, the phone offers several hand features such as an address book, operating modes (profiles), messages, audio/video player, camera and video camera, alarm clock, calculator and other features that come in hand both at work and during leisure activities.

The mobile phone meets the GSM/GPRS requirements and has been certified by relevant authorities.

Our company reserves the right to modify the content of this manual without prior notice.

·o·key	In standby mode, hold down the "O" ke to enable/disable the phone lamp.

Inserting SIM and Memory Cards
Before using your phone for the first time. It Is necessary to Insert the SIM card. You will obtain the SIM card from your mobile operator.
If you buy the services in a mobile network, you will obtain the SIM card along with the details such as your PIN code and optional services available.

Caution: Avoid bending the SIM card and protect it from scratching. Do not expose the SIM card to static electricity, water and pollution. When inserting and removing the SIM cards as well as the memorLl card, take utmost care to avoid damage to the slots and the phone's motherboard.
**Warning**
Before handling cards (SIM and memorLl cards), first, disconnect the charger, turn off the phone and remove the battery.

- To open the back cover, lift it with a LlOUr fingernail or a blunt object at the cut-out (on the bottom left corner of

  the phone near the rear battery cover) and gently prise the cover around the entire perimeter of the phone.

- Lift the battery with a LOUr nail or a flat tool on the phone's top part in the notch near the battery (on the

  inserted battery's top edge).

Insert the SIM cards into the appropriate slots under the battery with the contacts facing downwards so that the SIM card contacts touch the built-in SIM contacts inside the phone.
Insert the SIM 1 card into the left slot with the tapered corner facing the lower right corner of the slot, then insert the SIM 2 card into the right slot with the tapered corner facing the lower right corner of the slot.
The memory card is to be inserted into the slot in the lower right corner of the space under the battery which is protected by a retaining tab. Press the retaining tab gently and shift it to the right to release.
Insert the memorLl card under the retaining tab with the contacts facing downward in a way that the memory card contacts touch the phone's built-in contacts for a memory card and the mem□rLl card edge with notches faces the battery contacts downward. A properly attached mem□rLl card follows the shape of the slot and can be pressed evenly into the slot by applying slight pressure. Position the retaining tab over the memorLl card with a slight

pressure while moving it to the left to secure the tab against the motion.

Caution: If the memory card does not work. please check if It Is correctly Inserted and if the contacts are good. The maximum size of the supported memory cards Is 8GB. The card must be formatted to FAT32.

When inserting the battery into the phone, first connect the battery contacts with the contacts inside the phone (at the bottom right) and then gently push the battery downwards into the battery compartment.
When putting on the rear cover, make sure that the cover is correctly placed on the battery compartment and gradually, gently push down the cover edges from the top edge downwards along the entire perimeter until it slides properly onto the phone body at all points.

Please note: phone functions such as voice calls, receiving and sending text messages and data transfers at different speeds are only possible and available when at least one SIM card with activated operator features is inserted and within range of the operator's wireless network. Request information from the operator about available services on SIM cards and the accessibility of the network.

Turning the Phone On/Off
To turn the phone on, hold down the call end button.
To turn the phone off, hold down the call end button in the standby mode.

Charging the Battery
Plug the charging adapter into the charging connector on the bottom of the phone.
Then connect the charging adapter to a standard electrical outlet and the battery icon on the display will start to move. The phone's standby screen displays information about the charging in progress. When the battery indicator stops moving, the battery is finished charging. Press the charging adapter connector with two fingers and pull gently to disconnect it from the phone.

Caution: Use the original charging accessories to ensure the reliable operation of the mobile phone.

Security Password

PIN
The PIN code is designed to prevent illegal usage of SIM cards. The PIN code is usually attached to your SIM card. If enter the wrong PIN three times consecutively, you can unlock it by entering the PUK. For more details, please contact the mobile operator.
PIN2
You need to enter the PIN2 code to access certain features (e.g. call charging); if you enter the wrong PIN2 code three times in a row, LIOU can unlock it by entering PUK2. For more details, please contact mobile operator.
PUK

When removing the locked PIN code, must enter the PUK. The PUK code is attached to the SIM card. If the PUK is not attached, please contact the LIOUr cellular operator. enters the wrong PUK ten times consecutively, will no longer be able to use a SIM card. Please contact your phone operator to purchase a new card. The PUK cannot be changed. If lose the PUK, please contact your cellular operator.

PUK2

When removing the locked PIN2 code, you must enter the PUK2. If enters the wrong PUK2 ten times consecutively, you will no longer be able to use the functions that require entering the PIN2. Please contact your phone operator to purchase a new card. The PUK2 cannot be changed. If you lose the PUK, please contact your cellular operator.

Quick Calling Operation Guide
When LIOU start your phone for the first time, you will be asked to enter your PIN if it is set on your SIM card. In

the next step, your phone will ask you for the "Time and date". There is no need to set it at this point. The time and date will be set automatically when the phone is connected to the mobile network. The next item is "Language" - here LlOU selects the language in which the phone will communicate with LlOU. Press the OK button to confirm the selected language and press the back button to end the first setup.

II English is the default language After initially turning the phone on, please navigate through the phone Menu items as follows: Menu/ Settings/ Phone settings/ Language and select the desired language from the menu. To unlock/lock th lock, press the left soft keLl and then # on the standby screen.

Dialling a Call

In standby, press the numeric keLls to enter the number wish to dial. When the number is entered, press the dial number to make a call. If there are 2 active SIM cards in the phone, the phone will prompt to select the SIM to be used for calling. If want to make an international call, add an area prefix before the number.

Rejecting a Call

You can reject an incoming call by pressing the call end button.

Answering a Call

If there is an incoming call, the phone will alert in an appropriate manner (bLl vibration, ringing etc.). If this feature is supported by a telephone network, the display will show the caller's name and phone number; at this moment, can press the dial button to accept the incoming call.

Ending a Call

When finished with the conversation, can end the call by pressing the call end button.

Emergency Calls

You can make emergency calls directly without a SIM card. Different networks use different emergency numbers. For details, please contact mobile operator.

Fast Extension Selection

To insert a pause in a phone number (e.g. to enter the extension number), press and hold the "*" button while entering the number.

Call Volume Level

During an ongoing call, can change the volume level using the arrow navigation keLlS (j L). The shared speaker is designed in a manner to allow ringing, hands-free function and the earpiece and does not allow for more audio operations to be performed at one time. No sound is output from the speaker as well as the earpiece at higher volume levels.

Phone Menu Functions

Messages

The messaging service is a telephone network service. The correct function of this menu depends on the SIM card type and on the services provided mobile operator. Therefore, verify them before using this function. The message capacity of SIM depends on the SIM type. Before using this function, make sure to set the phone operator's service centre number.

Typing a message: TLlpe the text of the message on the lines using the keyboard. For instructions on how to insert text, please refer to a separate chapter. To send a message, use the menu available via the left soft (Options/Send) or press the centre OK Then enter the recipient of the message, enter the telephone number or select "Add from list" and confirm with the OK centre key.

Inbox: Stores the received messages.

Outbox: Stores the messages that were not sent successfully!

Drafts: Stores saved unfinished messages.

Sent: Stores successfully sent messages.

Contacts

This function allows you to browse through the telephone director, as well as save, edit and delete names and phone numbers in the phone and on the SIM card. The capacities of SIM cards vary and the maximum capacity of the phone's memory is 300 contacts. To save a new contact, select Add contact (first entry in the list), press the centre keLl and select Options/Edit to edit the selected saved enter.

Call Listing

The call history list offers the call overview and the option to delete the items.

Call Listings

2. Manual control: You can search and store the frequencies manually.

3. Automatic tuning: Starts automatic searching and stores the found stations in the station list.

File list: shows a list of recorded and saved songs from FM radio and audio recording.
File Manager
Allows you to view images and photos or video files on the memory card or in the phone using the photo album. Furthermore, you can set an image as the wallpaper or share a file via Bluetooth.

Tip: The files taken by the camera are stored in the Photos folder and the videos are stored in the Video folder.

Services
Browser
Your phone is equipped with an internet browser. For the correct browser function, a memory card with free space must be inserted. Before making the first settings, make sure to have mobile data services enabled with your cellular provider. If the network connection parameters are not set automatically, they need to be set manually in the application, in the Settings / Data account section. For parameters necessary for mobile data, please contact your cellular operator. The browser is designed to work with basic websites. Enter the address of the desired website in the line at the top of the display (enter URL).

Caution: The internet function primarily shows the Wap pages. Web pages may not always be shown correctly and may not support some active graphic elements. The unit may show an alert to a lack of space of the web page is too big and the integrated browser cannot show it.

SIM Toolkit
The SIM toolkit services availability is based on the SIM card. For more information, please contact your mobile operator.
Settings
You can adjust your phone settings, display, security or ringing profiles.
Profiles
The preset profiles are Home, Silent, Meeting and Outdoors. The settings of some profiles can be customised.
Dual SIM Settings
This is used to set the active SIM cards (only the selected SIM or both SIM cards).

Phone

Time and Date
You can set the phone's date and time as well as their display mode.
Language
You can change the language of your phone.
Preferred Input Method
Select the type of insertion when writing a message or contact. The most commonly used insertion type is Abc where the first letter after the full stop will always be uppercase.
Display
Allows you to customise your phone's standby display wallpaper settings, auto key lock, and welcome and shutdown animation.
Navigation Keyboard
You can change the speed dial assignment for the navigation keys in standby mode (up, down, right, left).

Aircraft Mode

The aircraft mode is used to turn off all of the phone's transmission and reception modes (such as turning off the GSM/GPRS and Bluetooth signals).

Attention: Do not use this function during flight, switch off the whole device.

Other Settings

LCD backlight. Here you can set the LCD brightness change and the time of illumination period. Use the left and right arrows, the function selection is done with the up and down arrows.

Network Settings

Select the SIM card on which you want to make the network setting change. Always consult with your network operator to make the change

Security Settings

- This contains the item to set individual SIMs and the phone security:

- PIN: offers PIN activation/deactivation.

- Change PIN: allows you to change the PIN settings.

- Change PIN2: allows you to change the PIN2 settings.

- Phone security: allows you to activate or deactivate the phone lock. The default password is "1122"

- Change password: this allows you to change your phone password.

- Privacy: you can set to use a phone lock to open selected functions.

Connection

SIM Data Connection

Select the SIM card that will be active for data services.

Data Accounts

It is possible to set the necessary values for data transfer for each SIM card. The parameters for data transfer settings are pre-set for most operators, if the Internet connection is not functional contact your network operator to check the entered values.

Restoring Settings

You can restore some of your phone's settings to their default values. The initial code to restore the factory settings is as follows: "1122"

Caution: restoring the factory settings may lead to losing the stored settings and data.

Organiser

Bluetooth

Bluetooth: If the Bluetooth connection is enabled, further Bluetooth setting options can be edited. To activate/ deactivate Bluetooth, use the first "Bluetooth" item by pressing the left soft key "On" /"Off".

Visibility: You can choose if your phone will be visible or hidden during the Bluetooth connection. If the Bluetooth visibility is disabled, other devices will be unable to discover your phone.

My device: A list of already paired devices is shown here. You can search for other Bluetooth devices and find compatible ones. If the pairing passwords of two devices are identical, the pairing will be successful. Some Bluetooth devices (such as Bluetooth headphones) have their pairing connection code preset. To find this code, please refer to the appropriate device's user manual.

Search for audio devices: a function that searches for possible connections to available audio devices.

Name of the device: Default: P013 – this name will be displayed for other devices. It can be changed as required.

Caution: Connection to audio devices is limited and the transmitted sound may not be of good quality. This is an optional feature.

Advanced

Audio path: select whether the audio should be sent to the BT audio device or played from the phone.

Memory: select the memory to store the received files. Set the memory card if inserted.

Lamp

Allows you to control the lamp located at the top of the phone. You can also enable/disable the lamp by pressing and holding the "O" key on the phone's standby screen.

Caution: Never aim the lamp directly into anyone's eyes. Should the light beam aim directly into your eyes, turn away your eyes immediately. Do not use any magnifying devices along with the lamp that would amplify the light beam.

Calculator

This function allows you to perform simple mathematical operations. To control, please use the navigation arrow keys and the centre key according to the display hint.

Calendar

You can use this function to display the calendar days easily. Press the up/down/left/right arrow keys to go to another date.

Alarm Clock

You can make presets of several enabled or disabled alarm clocks. For each alarm clock, please select if it's to be enabled or disabled. Press the centre OK key to enter in the selected alarm clock edit mode. In the edit mode, you can use the arrow buttons to move up or down and go to other options. With the cursor on the desired item, you can press the left/right buttons to select the change options with some items (such as hours and minutes of the wake-up time). With other items (usually marked with a drop-down list icon), press "OK" and then select one of the displayed options.

World Time

This function allows you to display the current time in the selected cities.

Entering Text

The unit offers several text input modes to allow you to enter text or data into your contacts, edit contact entries, search for names and type SMS messages.

If you want to change the input method in the "text input" mode, press the "#" button. The selected text input mode appears at the top of the screen.

Letters (upper case, normal)

Enter the editing page, press the "#" button and switch the input mode to "letters" (such as "Cz"), then use the numeric buttons and the selected numbers will appear on the screen.

Press the numeric button once to enter the first letter shown on the button, and press twice quickly to enter the second letter. If the letter to be entered is located on the same button as the previous letter, wait for the cursor to reappear and then input the next letter.

If you want to enter "ok", for example, you must press the "6" button three times to input "o", then press the "5" button twice and the display will show "k". Press the right soft button to delete the entered text.

Numbers

Enter the edit mode and press "*" to switch the input method to "numbers" (such as "123"). Then use the numeric buttons and the display will show the relevant numbers. Individual 0-9 buttons represent the numbers from 0 to 9. After entering the desired number, you can press the relevant button. Press the right soft button to delete the input number.

To input the punctuation marks in letter mode, use the selection by pressing the * button. To speed up the selection, you can use the "1" key (press repeatedly). To insert a space in text in the letter mode, press the "O" кеy.

Care and Maintenance

Battery Care

- The unit is powered from the battery. The battery must be recharged when flat. To reach the maximum power of a new battery, only charge a fully flat battery.

- Disconnect the charger from the main socket and the unit if it's not to be used. Do not let a fully charged battery

be charging longer than it's necessary. Overcharging may lead to shortening the battery's lifetime.

- The temperatures influence the level to which the battery can be charged. Therefore, the battery must be left at room temperature before charging. The battery cannot be charged if its temperature exceeds 40 °C. Use the battery only for the intended purpose and prevent it from short-circuiting. A random short-circuit may occur if a metallic object causes a direct connection between the positive (+) and negative (-) battery contact.
- Do not use a damaged battery.
- Do not leave the battery at hot or cold locations. This will shorten its capacity and lifetime. A unit with a hot or cold battery may not function temporarily even it the battery is fully charged.
- Do not put the batteries in fire as the may explode. Please dispose under local regulations.
- The following recommendations will help you to extend your phone's lifetime.
- Keep the unit and accessories out of the reach of small children.
- Keep your device dry. All kinds of fluids and humidity will lead to electronic circuitry malfunction.
- Avoid keeping the unit in rooms with high ambient temperatures. High temperatures may shorten the lifetime of electronic devices and deform or melt some plastics.
- Do not attempt to open the unit differently than is described in this manual. Unprofessional handling may lead to damaging the unit.
- When cleaning the unit, do not use aggressive chemicals or strong cleaning agents.

Attention: Use only the supplied or approved replacement accessories. Using non-original accessories may lead to the phone malfunction and void the warranty.

INSTRUCTIONS AND INFORMATION ON DISPOSING OF USED PACKAGING MATERIALS
Dispose of used packaging material at a site designated for waste in your municipality.
DISPOSING OF USED ELECTRICAL AND ELECTRONIC EQUIPMENT

This symbol on products or original documents means that used electric or electronic products must not be added to ordinary municipal waste. For proper disposal and recycling, take these products to designated collection points. Or in some European Union states or other European countries the products can be returned to the local retailer when buying an equivalent new product. Disposing of this product correctly helps save valuable natural resources and prevents damage to the environment by improper waste disposal. Ask your local authorities or collection facility for more details. In accordance with national regulations penalties may be imposed for the incorrect disposal of this type of waste.

For business entities in European Union states
If you want to dispose of electric or electronic devices, ask your retailer or supplier for the necessary information.
Disposal in other countries outside the European Union
This symbol is valid in the European Union. If you wish to dispose of this product, request the necessary information about the correct disposal method from the local council or from your retailer.

- FAST CR a.s. hereby declares that the radio equipment type P013 complies with the Directive 2014/53/EU.
- For full version of the EU declaration of conformity, please reter to **www.sencor.eu** website.
- The text, design and technical specifications may be changed without prior notice and we reserve the right to make these changes.
- The original version is in the Czech language.
- Manufacturer's address: Fast CR, a. s., U Sanitasu 1621, CZ 251 01 Ricany, Czech Republic

Warranty Conditions

Warranty card is not a part of the device packaging.

This product is warranted for the period of 24 months from the date of purchase to the end-user. Warranty is limited to the following conditions. Warranty is referred only to the customer goods using for common domestic use. The claim for service can be applied either at dealer's shop where the product was bought, or at below mentioned authorized service shops. The end-user is obligated to set up a claim immediately when the defects appeared but only till the end of warranty period. The end user is obligated to cooperate to certify the claiming defects. Only completed and clean (according to hygienic standards) product will be accepted In case of eligible warranty claim the warranty period will be prolonged by the period from the date of claim application till the date of taking over the product by end-user, or the date the end-user is obligated to take it over. To obtain the service under this warranty, end-user is obligated to certify his claim with duly completed following documents: receipt, certificate of warranty, certificate of installation.

This warranty is void especially if apply as follows:

- Defects which were put on sale.
- Wear-out or damage caused by common use.
- The product was damaged by unprofessional or wrong installation, used in contrary to the applicable instruction manual, used in contrary to legal enactment and common process of use or used for another purpose which has been designed for.
- The product was damaged by uncared-for or insufficient maintenance.
- The product was damaged by dirt, accident of force majeure (natural disaster, fire, and flood).
- Defects on functionality caused by low duality of signal, electromagnetic field interference etc.
- The product was mechanically damaged (e.g. broken button, fall).
- Damage caused by use of unsuitable media, fillings, expendable supplies (batteries) or by unsuitable working conditions (e.g. high temperatures, high humidity, quakes).
- Repair, modification or other failure action to the product by unauthorized person.
- End-user did not prove enough his right to claim (time and place of purchase).
- Data on presented documents differs from data on products.
- Cases when the claiming product cannot be indentified according to the presented documents (e.g. the serial number or the warranty seal has been damaged).
