Shark®

SharkClean App on Google Play

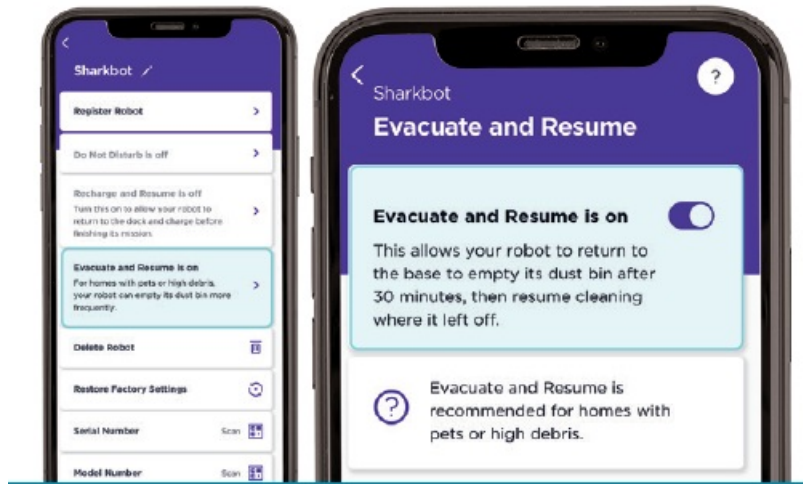

RECHARGE & RESUME

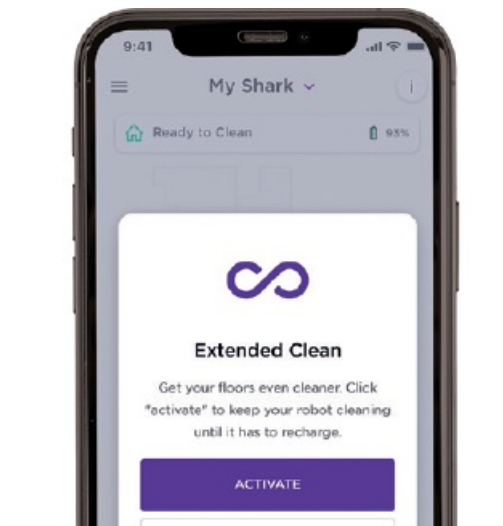

For optimum performance, your robot vacuum will return to the base, recharge, and can pick up where it left off. Turn on Recharge & Resume in your app™s Settings.

EVACUATE & RESUME

Recommended for homes with shedding pets. Every 30 minutes your robot will return to its base to empty its dust bin, and then will continue cleaning until the job is done.
Turn on “Evacuate & Resume” in your app’s Settings.

EXTENDED CLEAN

After every cleaning mission, your robot may have remaining battery power. Extended Clean uses this extra power so your robot can continue cleaning your home.

The result: even cleaner floors.

Turn on Extended Clean in your app™s Settings.

Increased suction combined with a multi-directional cleaning path provides a deep clean to areas that need it most—like a small room, high-traffic zones, or single spots. Just select the area you need deep-cleaned, and your robot in ULTRACLEAN MODE™ will do the rest.

To target a single room, high-traffic zone, or single spot, select ULTRACLEAN on your app's main screen.
