SMARTSTART

SMARTSTART SmartMobile Basic Unit

SETTING UP THE SMART MOBILE BASIC UNIT

Connect the power supply cord to the SmartMobile Basic™ device and plug it into an electrical outlet. The unit display will show “Initializing,” and then “Ready.” If the battery is completely dead, it may take a few minutes to initialize the device. Place the mouthpiece in the nozzle found on top of the smart mobile Basic device (as show below).

HOW TO TAKE A TEST

1. We recommend drinking or swishing with water before each test to eliminate any potential contaminants.
2. Take a deep breath and blow steadily into the mouthpiece until the device stops beeping and you hear a click.
During the test, the display will show “Testing – Keep Blowing.”
3. After testing, the display will show “Analyzing – Please Wait.” It will show “Ready” when the test is complete, or show a message that indicates an incomplete test. Follow the directions on the screen.

REMINDERS

- Make sure the room or testing area is well-lit.
- Do not use a breath freshening agent before taking a test. Most of these contain alcohol.
- It is a violation of your program for another person to take a test on your device.
- See image to ensure the correct face-to-camera position.

DISPLAY MESSAGES

Service Lockoutin Hours The number of hours remaining to have your device serviced before it goes into

lockout. **DO NOT IGNORE THE GRACE PERIOD WARNING.**

Violation Lockoutin Hours A reminder of the number of hours remaining before the unit goes into lockout due to violations. **DO NOT IGNORE THE GRACE PERIOD WARNING.**
If your device enters “Service” or “Violation” lockout, take it to your nearest service center as soon as possible. Go to smartstartinc.com/locations to find the nearest shop.
