How to Find Ethernet / Bluetooth / WiFi Mac Address

Home » [Software](#) » [How to Find Ethernet / Bluetooth / WiFi Mac Address](#) 

Mac addresses can be useful to identify devices on your network as well as for troubleshooting and blocking network connections. For the most common devices, the instructions to locate the mac address are as follows:

Note, many devices will have multiple MAC addresses, one for each 'network' interface including WiFi (5G), WiFi (2.4G), Bluetooth, and Ethernet. You can lookup a Mac address to find the manufacturer via [MAC.ic](#)

MAC Lookup

Apple Devices

1. Open the **Settings** menu by selecting the **gear** icon.
2. Select **General**.
3. Select **About**.
4. Find the MAC address in the **WiFi Address** field.

Android Devices

1. Open the **Settings** menu by selecting the **gear** icon.
2. Select **About Phone**.
3. Select **Status**.
4. Find the MAC address in the **WiFi MAC Address** field.

Windows Phone

1. Open the apps list and select **Settings**.
2. Go to **System Settings** and select **About**.
3. Find the MAC address in the **More Info** section.

Macintosh/Apple (OSX)

1. Select the **Spotlight** icon in the top-right corner of the screen, then type **Network Utility** in the **Spotlight Search** field.
2. From the list, select **Network Utility**.
3. Within the **Info** tab, find the network interface drop-down.
 - If your device is connected to your Wireless Gateway using a cable, select **Ethernet**.
 - If your device is connected wirelessly, select **AirPort/Wi-Fi**.
4. Locate the MAC address in the **Hardware Address** field.

Windows PC

1. Select the **Start** button. In the search bar, type **CMD** and select **Enter**.
 - **Note:** If you're a Windows 8 or 10 user, you can find this option by going to the right sidebar and searching for **Command Prompt**.
2. Select **Command Prompt**.
3. Type 'ipconfig/all', then select **Enter**.
4. Find the MAC address in the **Physical Address** field.
 - If your device is connected to your Wireless Gateway using a cable, this will be listed under **Ethernet Adapter Local Area Connection**.
 - If your device is connected wirelessly, this will be listed under **Ethernet Adapter Wireless Network Connection**.

PlayStation 3

1. Select **Settings**.
2. Select **System Settings**.
3. Find the MAC address within **System Information**.

PlayStation 4

1. Select **Up** on the D-Pad from the main screen.
2. Select **Settings**.
3. Select **Network**.
4. Find the MAC address within **View Connection Status**.

Xbox 360

1. From the home menu, go to **Settings**.

2. Select **System Settings**.
3. Select **Network Settings**.
4. Select **Wired Network** within the listed available networks.
5. Select **Configure Network** and go to **Additional Settings**.
6. Select **Advanced Settings**.
7. Find the MAC address within **Alternative MAC Address**.

Xbox One

1. From the home menu, go to **Settings**.
2. Select **Network**.
3. Find the MAC address within **Advanced Settings**.
