Solarman App User Manual
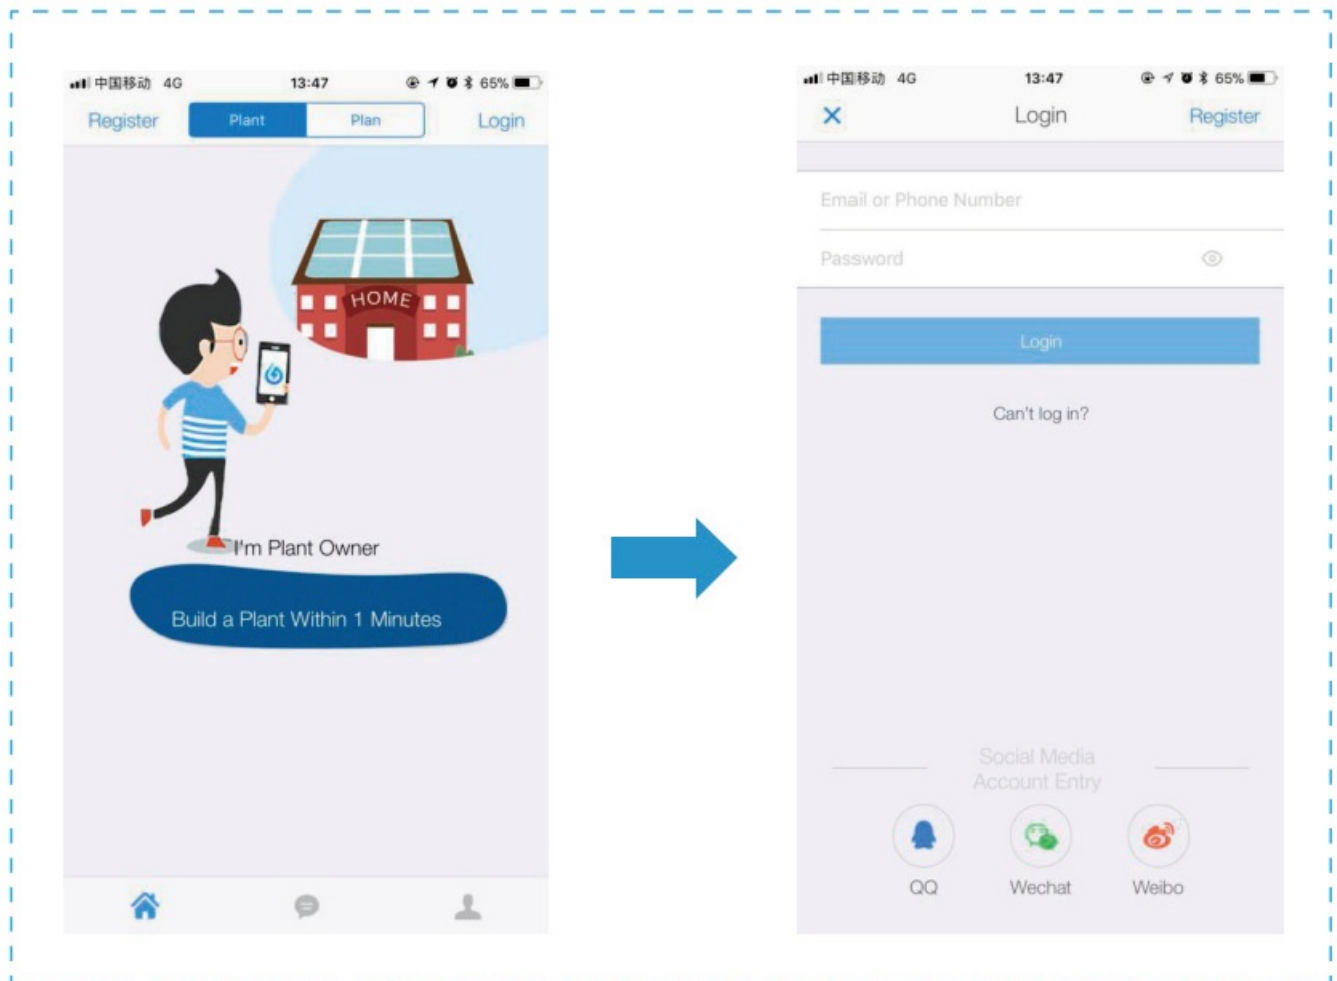

SOLARMAN

Solarman App

Download APP

iPhone Search "SOLAR MAN" in Apple Store.
Android Search "SOLAR MAN" in Google Play

Register
Click [Register] to create new account. You can use email to register.
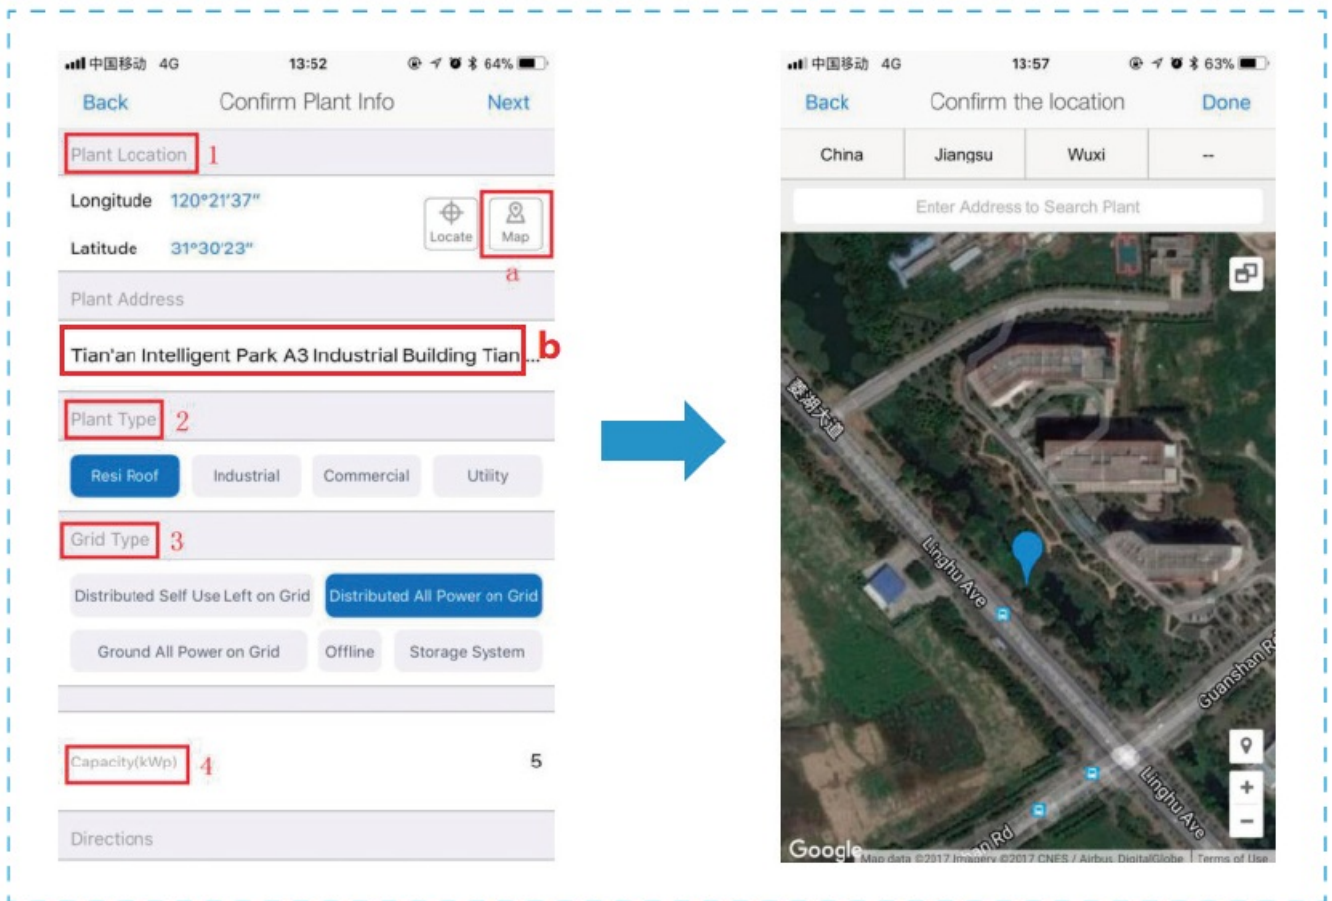

Create Plant

Click[+] and select [Create Plant]. Then scan the serial number of the stick logger. or manually enter the serial number.

Edit plant information

1. Confirm your plant location (GPS function will automatically determine the plant site; if you want to modify the location, click the "map" icon, and then manually enter the address in box b)
2. Select your plant type
3. Select your grid type
4. Fill in plant capacity

(You may keep the default settings in the rest of the blank because APP has received local electricity prices and subsidies)
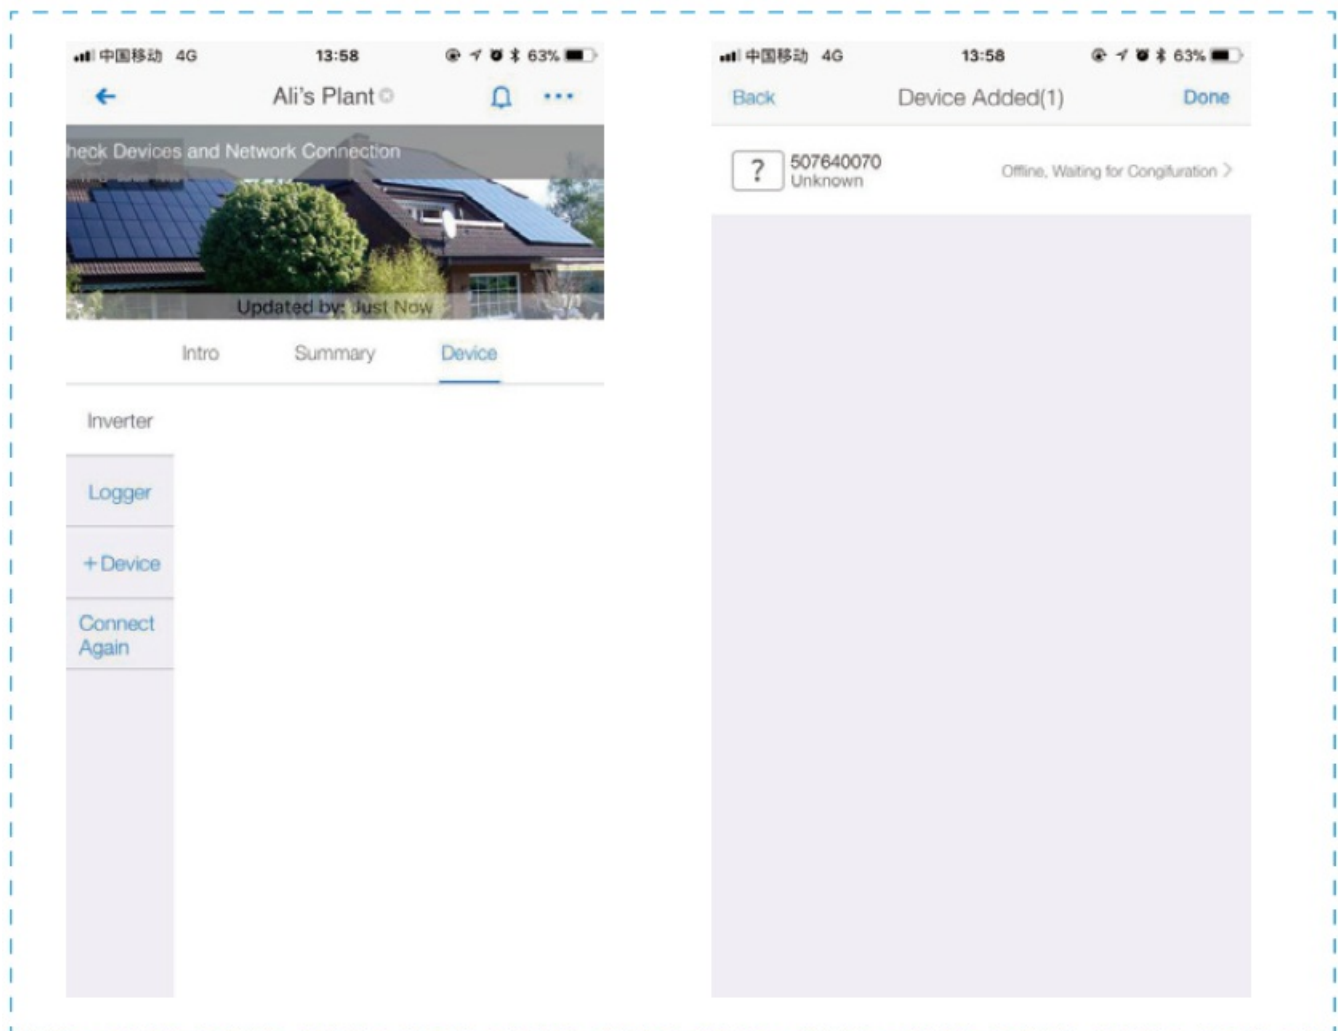

Input Plant Name

It is suggested to create a plant name like "location + name + capacity" (e.g., Wuxi IGEN 8.1 'r0N), then click [Done].

Now you can see your new plant on the homepage.

WiFi Connection Configuration
Select the plant and click [Connect Again] in the tab [Device]. Select your device and click [Done] to the next step.
Configuration (for Android users)

APP will automatically get your WiFi network, so you need to enter your WiFi password to continue the configuration. If the network is not accurate, select [switch network], then find or manually enter the network ID.

The connection will automatically start after connecting the network.

It normally takes 3-5 minutes to configure successfully. Then, you can go back to tab [Device] and click [+Device] to add more devices
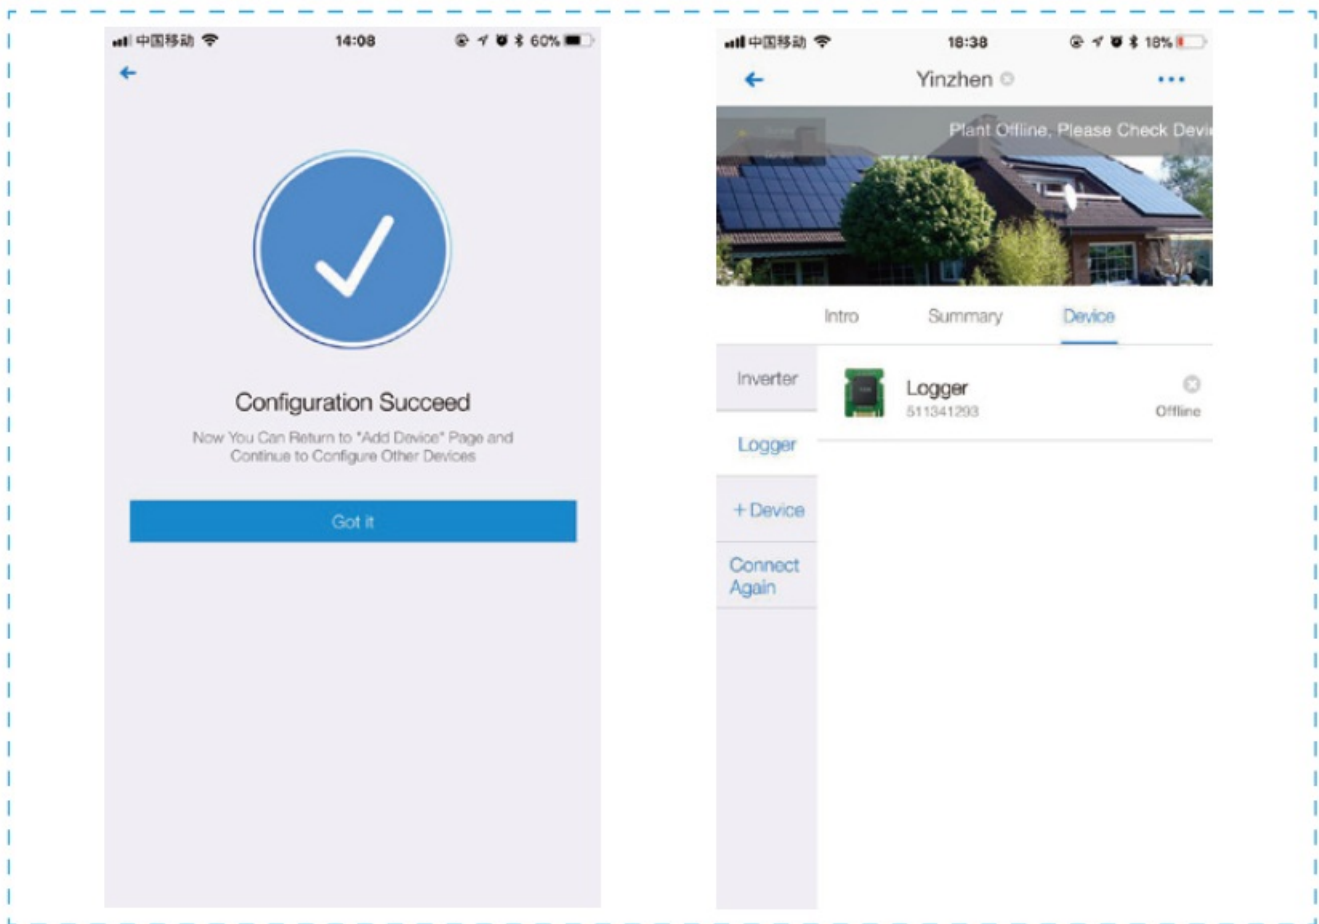

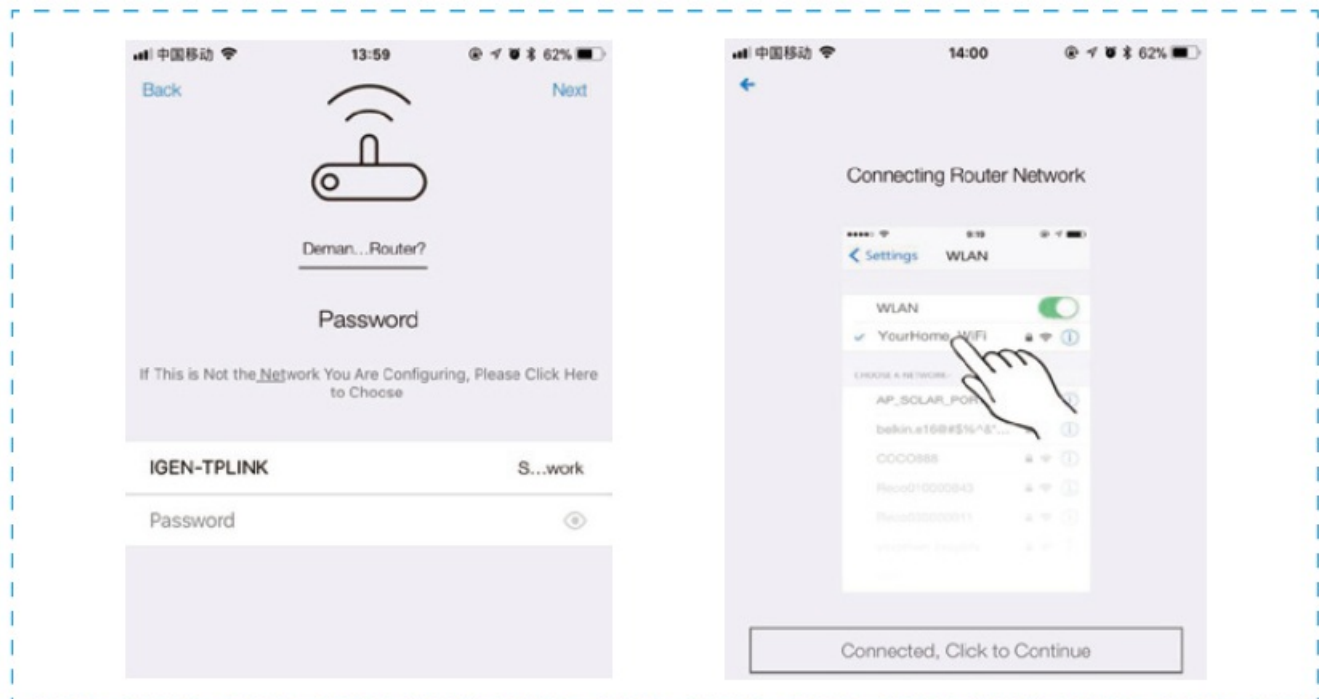

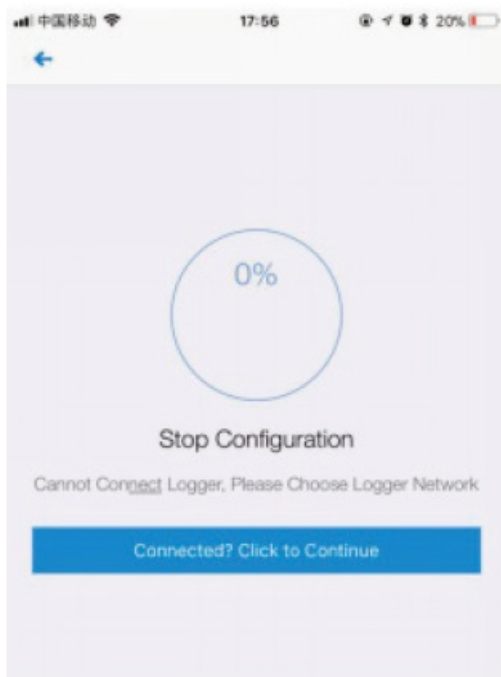

Configuration (for iOS users)

APP will automatically get your WiFi network, so you need to enter your WiFi password to continue the configuration. If the network is not accurate, select [switch network], then find or manually enter the network ID.

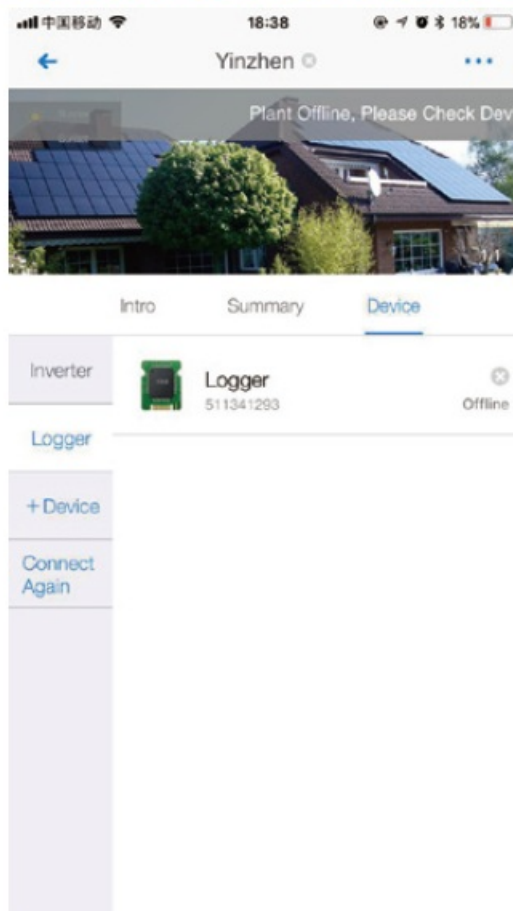

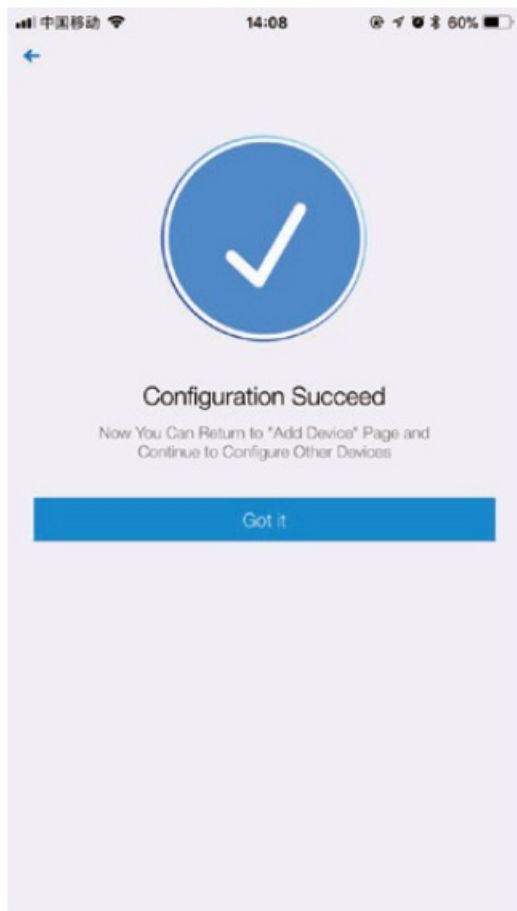

Go to iPhone's [Network Settings] interface, and select the stick logger's network AP _XXXXX(S/N). Then return to SOLAR MAN APP, and the stick logger will start to configure.

Notice

If it is unable to find an AP_XXXXX(S/N) in the wireless network list, please make sure to shorten the distance between WiFi routers and Stick Logger to under 10 meters. The connection or setting may appear problem if you have to repeat the above steps and still cannot find the AP _XXXXX. Please follow the Logger Manual for troubleshooting or contact our Customer Centre.It normally takes 3-5 minutes to configure successfully, Then, you can go back to tab [Device] and click [+Device] to add more devices.

If the configuration fails, the reasons may be:

1. The router password is wrong. Please click [Retry] and check the password.
2. The router's network signal is weak and the logger is too far away from the router. Please put the router closer to the logger.
3. Click too fast during the Logger's AP connection. Please wait a few seconds and then jump to the configuration after Logger's AP is connected.

If you meet the following situations, please reconfigure the logger network:

1. Change router
2. Change WiFi password
3. Change the router's SSID
4. Enterprise routers may restrict WiFi connectivity.
