Introduction

Solid State Logic (SSL) will showcase its latest advancements in touring, installed sound, broadcast audio, and content production workflows during ISE 2025, held at Fira Barcelona, Gran Via, from February 4th to 7th. SSL will debut its highly anticipated SSL Live V6 software update, demonstrated on the flagship L650 console. Attendees will also explore the versatile System T Flypack TCA and the latest hybrid production tools for music and content creation.

SSL Live V6 Software Update

At ISE 2025, SSL will deliver exclusive demonstrations of its renowned SSL Live production platform via the flagship L650 console. Designed for large-scale productions, the L650 offers unmatched processing power, intuitive control, and pristine sound quality, making it ideal for tours, installed sound, and event spaces. Paired with SSL's advanced SuperAnalogue Dante and MADI-based I/O, the system provides seamless integration and reliability.

Features of SSL Live V6

- The Fusion effect rack emulates five circuits from SSL's award-winning Fusion hardware, delivering rich tonal color.
- The Path Compressor Mix Control introduces advanced parallel compression directly to channels and buses.
- Updates to the TaCo app allow engineers to remotely control the acclaimed SSL Sourcerer and Blitzer modules.
- Enhanced Dante Routing Modes provide seamless system-wide integration across ShowFile Saved and Outside of ShowFile setups.

Versatility and Integration

Built on an open, flexible architecture, SSL Live allows operators to configure workflows for any application. Advanced routing capabilities make it equally suited to touring setups —supporting up to eight SuperAnalogue MADI stageboxes via the Blacklight II Concentrator interface—or installed sound systems with full Dante routing for multi-room configurations. This versatility is accessible through SSL Live Bundles, a cost-effective solution for touring, installed sound, and church audio.

Hybrid Production Tools

For those interested in enhancing content creation, streaming, and music & audio production, SSL will display the latest hybrid production tools, including UF1 and UC1 controllers and the new range of SSL 2/2+ MKII audio interfaces.

Conclusion

SSL looks forward to meeting its customers and partners at ISE 2025 and will offer live demonstrations each day of the show.
