Common Problems

Why my device stays "Offline"?

– ① Maybe you have entered a wrong Wifi password.

– ② Maybe there's too much distance between the switch your router or the environment causes interference, consider getting close to the router. If failed, please add it again.

– ③ The 5G Wi-Fi network is not supported and only supports the 2.4GHz wireless network.

– ④ Maybe the MAC address filtering is open. Please turn it off.

If none of the above methods solved the problem, you can open the mobile data network on your phone to create a Wi-Fi hotspot, then add the device again.
