Specifications

- Product Name: Universal CPU Mount
- Mounting Positions: 2 (Option A: Outside desk frame, Option B: Inside desk frame)
- Compatibility: Fits computers of various widths
- Mounting Method: Self-tapping timber screws and short machine screws
- Strap Material: Durable and adjustable straps

Installation

- This mount gives you the option to mount in 2 positions.

- Option A: Mount on the outside of your desk frame. May require you to move the leg inwards before install.
- Option B: Mount on the inside of your desk frame.

2. Before you begin, measure the width of your computer. Then mount the brackets on your desk 5mm wider than your computer using self tapping timber screws.
3. Once the brackets are screwed into position, its time to install the mount. Use the short machine screws to complete this step.

4. Loop the straps through the brackets ensuring the buckle opens outwards (see next steps).

5. Loop the straps through the buckles as shown in these 4 steps. When tightening to your computer, have straps tight then push buckle closed which will tighten slightly further for a snug fit.

Frequently Asked Questions

Q: Can this mount be used for laptops?
A: This mount is specifically designed for CPUs and may not be suitable for laptops due to size and weight differences.

Q: How do I adjust the straps for different computer sizes?
A: The adjustable straps can accommodate various computer sizes. Simply tighten or loosen the straps accordingly for a secure fit.
