FAQ

Q) Can this USB parallel device be used for anything other than a printer?

A) This USB parallel device is only intended to be used with printers. Your operating system will register this device as a USB Printer Support device and not as an additional LPT port.

Q) What type of parallel port does this use?

A) The ICUSB1284 has a 36-pin Centronics parallel printer port, not a DB25 printer port. If you require a DB25 parallel port you will require the ICUSB1284D25 (ASIN: B000ZLRGKG)
