User Information

Main Parts

📷 **A**

1. Tube
2. Suction tube
3. Hose

Safety information

The sand and wet-blasting kit is used for wet blasting of masonry and metal parts. STIHL recommends using STIHL granules or other blasting granules with a grain size of 0.8 mm for sand and wetblasting kits.

Only suitable for use with STIHL RE series pressure washers.

The pressure specification (pmax) and temperature specification (tmax) of the pressure washer must not be higher than the pressure specification and temperature specification on the accessories.

Assembling

► Fixing the sand and wet-blasting kit

📷 **B.**

Working

► Immerse the suction tube into the granules

📷 **B.**

► Move the sand-wet jet evenly along the surface to be cleaned.

After finishing work

► Remove suction tube and press lever of spray gun

📷 **C.**

► Lift the suction tube and press the lever of the spray gun until the granules are flushed out of the sand and wet-blasting kit

📷 **C.**

Cleaning

► Clean the sand and wet-blasting kit with a damp cloth.
