KAL – V Kreta Lyre Bridge Sensor

Kreta Lyre Bridge Sensor

The Lyre bridge sensor comprises the latest innovation among a wide market of Lyre sensors. It is handmade preadjusted by extremely high accuracy apparatus and high professional long-term experienced sensor makers. It is manufactured to be noise-free and able to match all Amps and consoles. Perfectly balanced, satisfying even the most demanding customer with a natural undistorted sound, corresponding to each particular string of the instrument. Our company make this bridge sensor with a build -in piezo device which eliminates all adjustment problems contributing to the fact that the sound comes straight from the strings.

*** You can easily customize the whole device according to your own particular string-bridge height arrangement, by simply filing the upper part of the wooden bridge.

**The Rea jack is mounting with self-adhesive clamp.

“The % jack is mounting with screws.
