**KALP Lyre Bridge Sensor**

The Lyre bridge sensor comprises the latest innovation among a wide market of violin sensors. It is handmade pre-adjusted by extremely high accuracy apparatus and high professional long-term experienced sensor makers. It is manufactured to be noise-free and able to match all Amps and consoles. Perfectly balanced, satisfying even the most demanding customer with a natural undistorted sound, corresponding to each particular string of the instrument. Our company make this bridge sensor with a build -in piezo device which eliminates all adjustment problems contributing to the fact that the sound comes straight from the strings.

\*\*\* You can easily customize the whole device according to your own particular string-bridge height arrangement, by simply filing the upper part of the wooden bridge.

\* The Rca jack is mounting with self-adhesive clamp.
