## How to Use

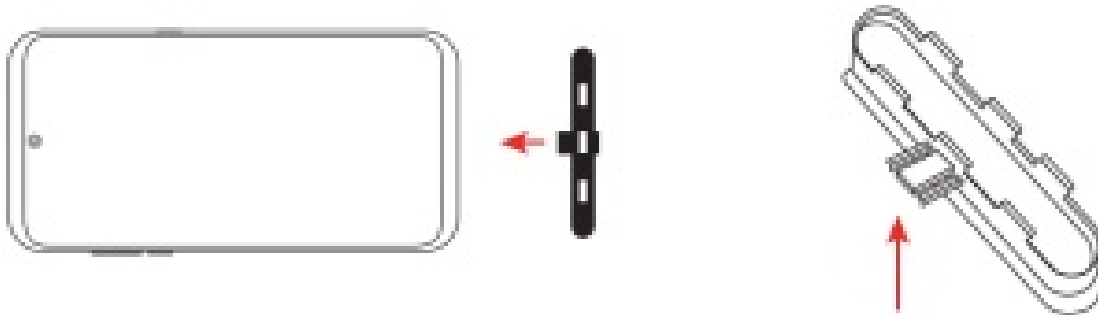

1. Adhere the mounting pad to a sturdy surface, and place your phone on top of it. This will help keep the phone in place during installation.

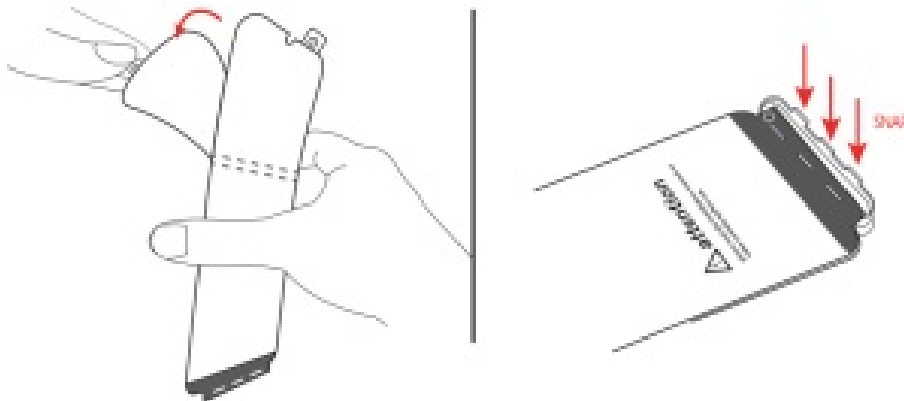

2. Begin by cleaning the screen with the Wet/Dry Wipes and the Dust Removal Stickers. **\*Please watch the installation video carefully before installing the screen protector.**

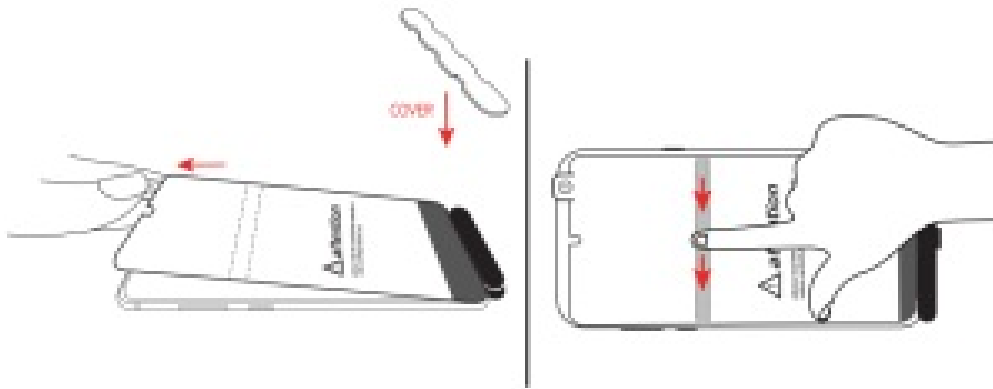

3. Fully insert the alignment tool into your phone's USB-C port, making sure it is flush against the bottom of your phone.

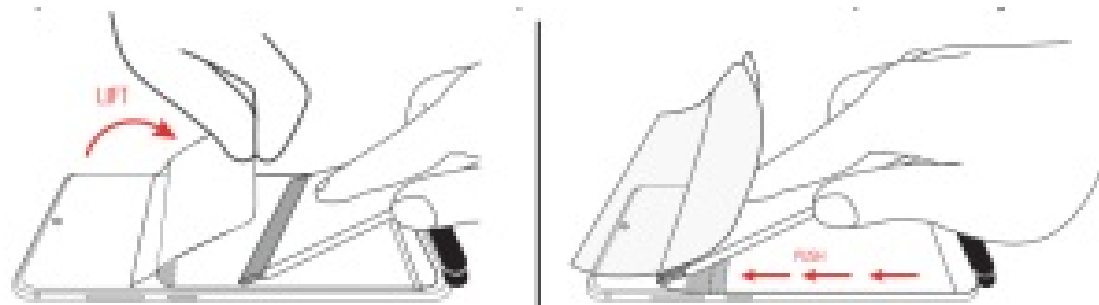

4. Remove the Tab 1 film carefully, and place the three hole punch part of the screen protector onto the alignment tool. Please make sure that the Tab 3 film, which has the text printed on it is face up, then affix the alignment tool cap to the bottom piece to keep the protector in place.

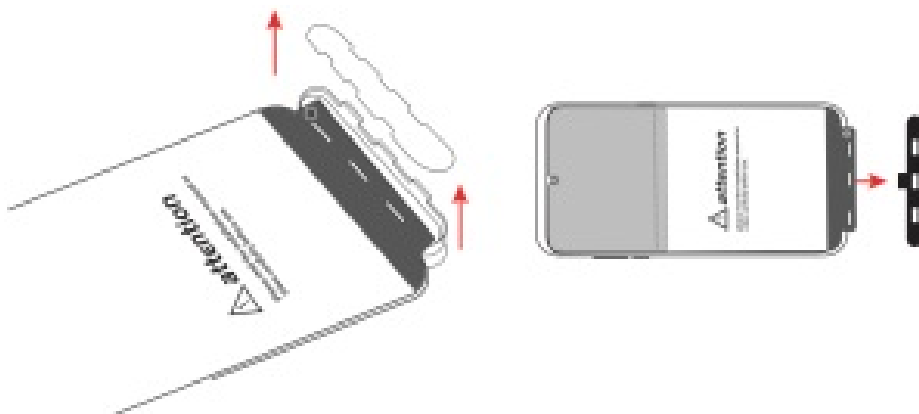

5. Carefully align the protector to your phone's screen, and once in place, swipe on the middle adhesive strip.

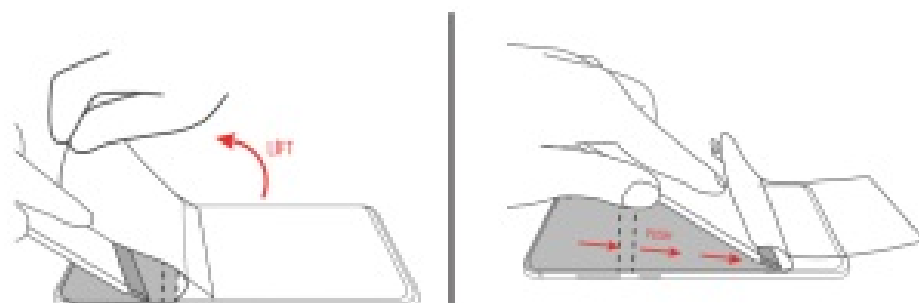

6. Lift the loose end with tab 2, starting from the middle of the protector at the adhesive strip. Use the squeegee to push the tab 2 film out from underneath (effectively rolling and adhering the top half of the screen protector into place.)

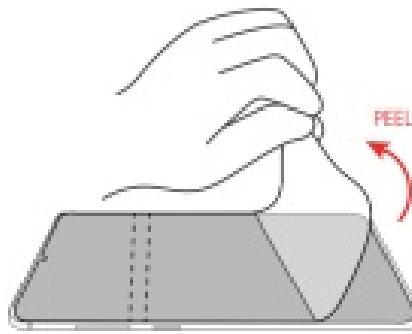

7. Remove the cover of the alignment tool and then remove the bottom half of the tool from the phone's USB-C port.

8. Repeat Step 6 for the bottom half of the screen protector.

9. Push with thumbs along the protector to seal it in place and remove the top mask film.

## Damaged or Arrived Broken?
