Techage WiFi AI Camera

Techage WiFi AI Camera

Thank you for purchasing Techage security WiFi AI Camera. Tech is committed to providing customers with high-quality and reliable security products and solutions. This quick user guide will help you learn fast and make it work easily. For the detailed and latest user manual, you can download the PDF user manual on our website: **www.techage.com**
About the WiFi AI Camera

1. DC Power Port: Power Input 12V 1 A.
2. Reset Button: Reset the camera to be factory defaults and into WiFi searching mode.
3. RJ45 Port: For Ethernet cable to the router
4. Speaker: For two-way talk, alert Voice play, alarm sound or broadcast
5. Microphone: For picking up audio (For different models, the position of the MIC may be different.)

This WiFi camera is an AI camera, with flood light on in night after Human Shape Detection. Human Shape Detection is a smarter way to detect human motion with AI tech. It is much more accurate than motion sensor and common motion detection and with no false alarms because of pets or swinging branches of trees. This WiFi camera is with a speaker, which is for two-way talk and alert voice play. When human detected or alarm, it will play alert voice messages like "Alert area, please leave Hello, welcome!" or an alarm sound if this feature is turned on. (As the factory defaults it is off.)

Insert or take out the TF card
Remove the card slot cover to insert F card or take it out.

View on Smart Phones

Download and Install the issue App
Scan the QR code below to download the "issue" app or search "issue" in App Store or Google Play to download it. When you install it, please allow all the authorizations if you want full functions and alarm pushes anytime.

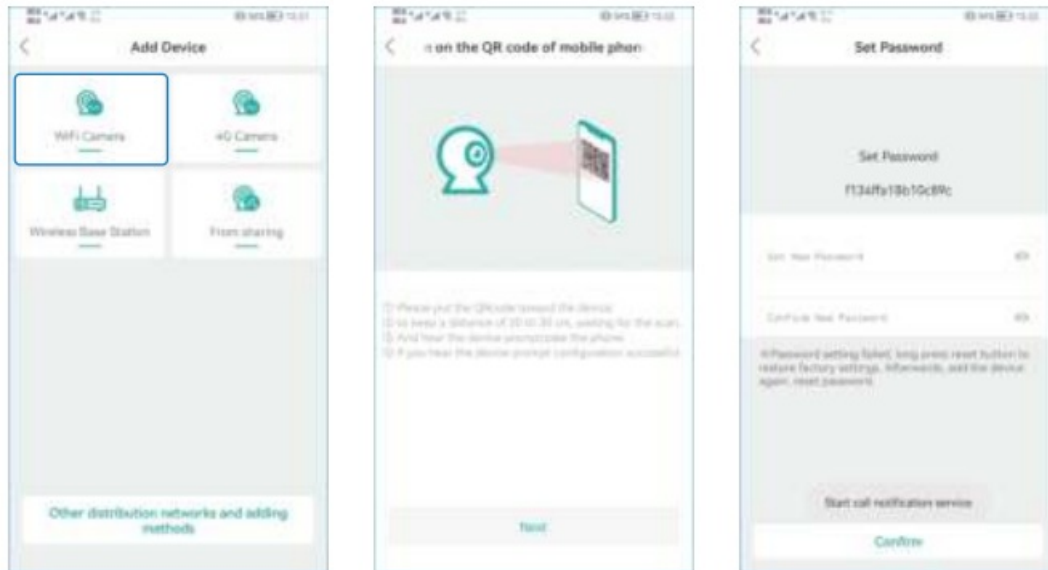

Add the AI Camera to WiFi
After installing the app on your smartphone, you can register an account in it and start adding your WiFi AI camera in it.

Smart WiFi Setup

Power on the camera with the power adapter. The white lights in the camera will be on for seconds,and the camera will be in WiFi and initialization mode and you can add your camera to WiFi. (You can also press the reset button to get the camera into the initialization mode and program the WiFi.)

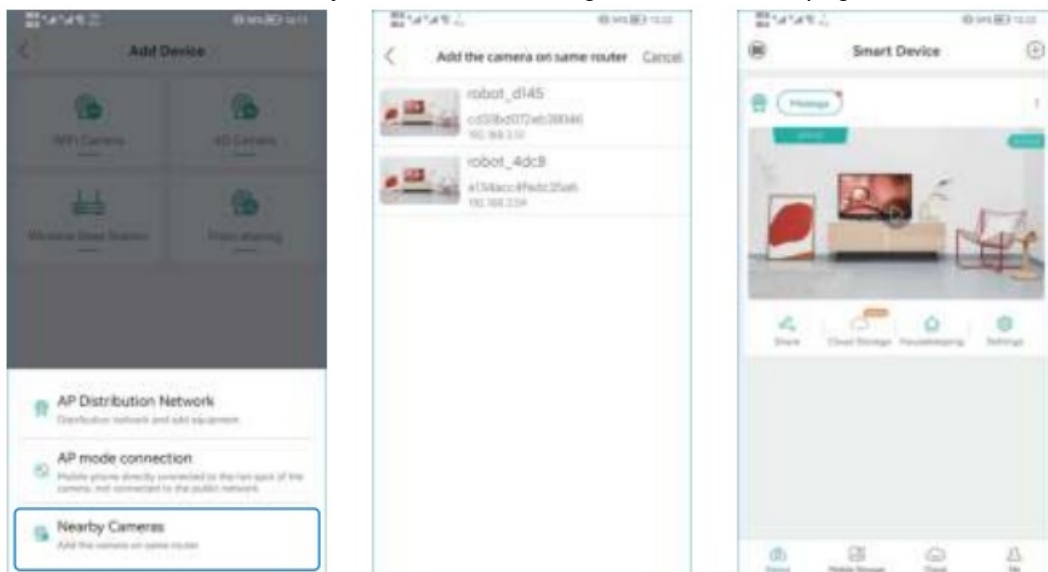

Before adding, please ensure your smartphone is connected to the WiFi of the same router as the WiFi Al Camera. And keep the camera and your smartphone nearby the router within 10 feet.
Click the"+" on the top right corner, then choose "WiFi Camera': and then follow the steps, there will be voice prompt for each step. After you set the WiFi into the camera successfully you will hear a voice prompt and it will go to the "Set Password" page. After the password setting, you can name the device and start enjoying the video surveillance.
If you still can not connect the WiFi to the camera successfully, please try to use the wired Ethernet cable to connect it to WiFi as below.

Wired Ethernet Cable to Setup WiFi
Use the Ethernet cable with the camera to connect it to the router. Ensure your smart phone is connected to the router's WiFi. Click the"+" on the top right corner, and then at the bottom ,click"other distribution networks and adding methods': then choose"Nearby Cameras': it will start searching the cameras connected to the router with the Ethernet cable. Choose the camera you want to add and go back to Device page to check it.

After you added the camera into the App, then Click © Setting and go to "Network Settings" page. Choose the WiFi network that connected to the phone and then click "Save': After that plug off the Ethernet cable from the camera, you will hear a prompt"Connect the router successfully!': which tells that it is connected to the WiFi network.
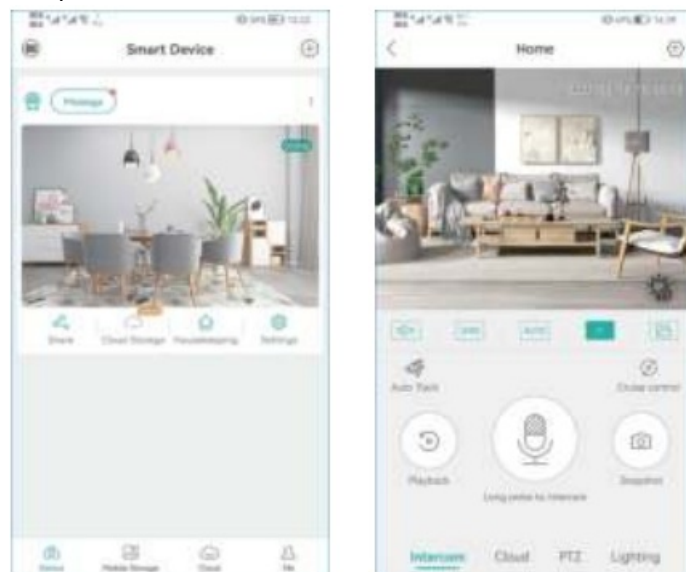

Using the App
After the camera is added into the app, follow steps below to do settings and control it.
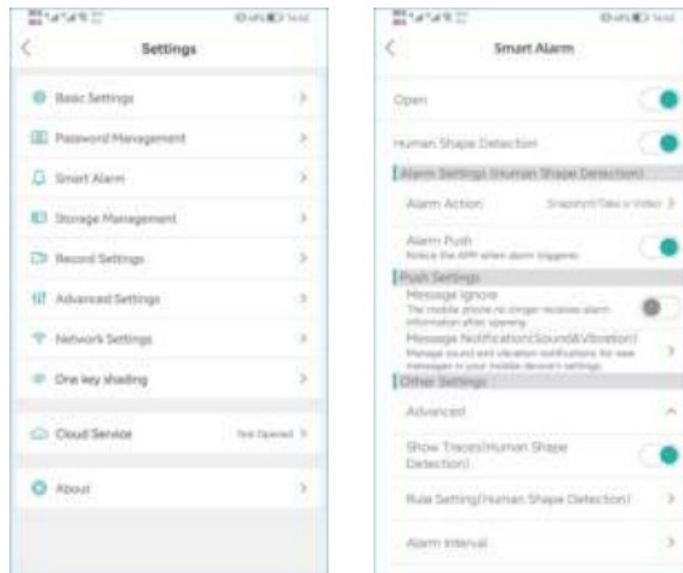

Control the camera
Click the video image of the camera and then you can do snapshot, two way intercom and playback the video recorded on the TF card. Click i to record video clips, it will count the seconds of the recorded video clips that you've recorded on your mobile phone .

You can find the picture snapshot and the video clips you made on your phone"Mobile Storage"
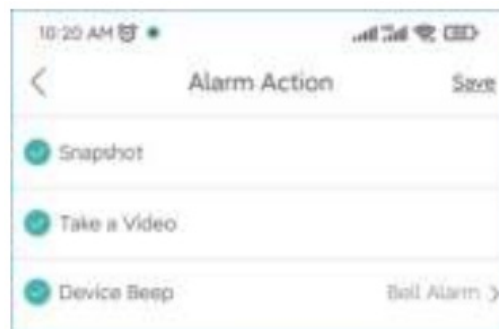

Settings
In the settings, you can do basic settings, like name the device, language, and so on. You can change the password, do alarm settings, open or close the alarm push, and check storage and network settings.

Unique features

Alarm Voice Alert

In the Smart Alarm,click the "Alarm Action". You can set what the camera does after alarms. It can snapshot, take a video and at the same time, it will beep or play a voice prompt. You can click "Bell Alarm" to choose what prompt voice it will play after alarms. You can choose "Alert area, please leave" Hello, welcome!" or" Howling Alarm". As default, this function is closed. Please do remember to save it after

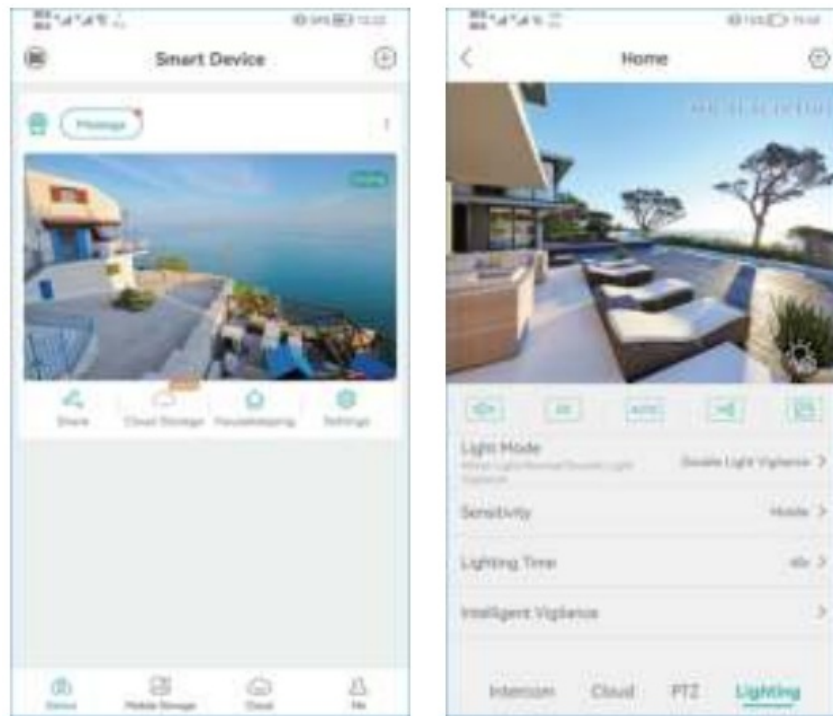

Flood Light

On the live video, click the icon. It will show the IR light settings for the camera. There are two types of lights in the camera, IR light and white light, and they have three modes.

White Light Mode: The white light will be on all the time in night.

Normal: Only IR light will be on in night. And the white light will be off day and night.

Double Light Mode: The IR light will be on in the night and the white light will be turned on in the night after human detection. (It is the default mode of the camera.)

AI Smart Features

On the live video, click the icon, and you can find "Intelligent Vigilance". There are smart AI functions, like "Human Shape Detection' "Show Traces" "Cordon" and "Alert Area" Settings.

- **Human Shape Detection**

  Human Shape Detection is a smarter way to detect human motion with AI tech. It is much more accurate than motion sensors and common motion detection and with no false alarm because of pets or swinging branches of trees.
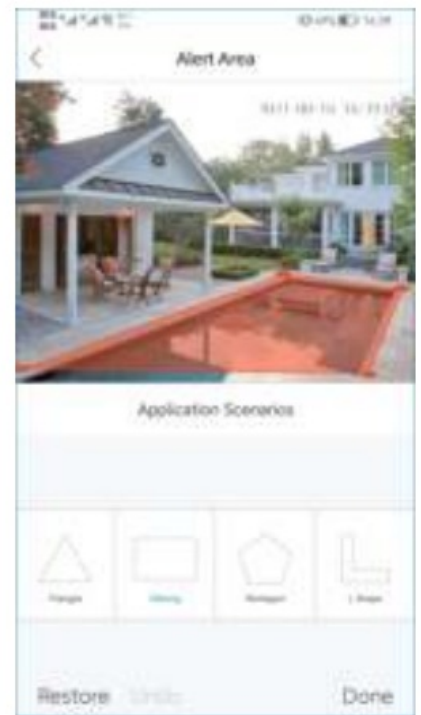

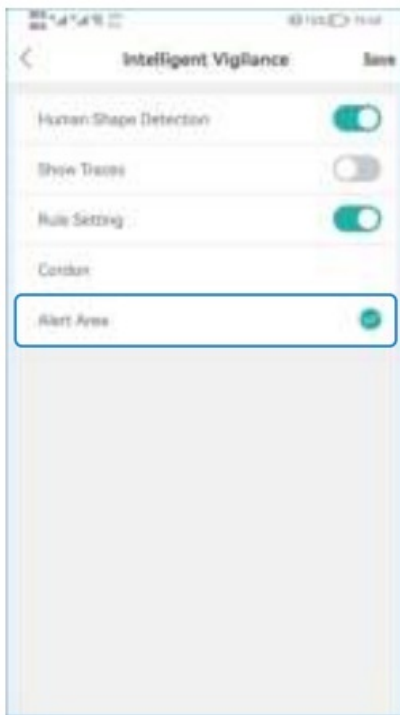

- **Show Traces**

  When this function is on, there will be a trace frame, when people are in the live video and it will follow the people when they are moving.

- **Cordon and Alert Area**

  There are two ways to set the protection zones. One is a cordon, the other is an alert area. For the cordon, you can put a cordon in the video image and when people cross it, it will alarm. You can set different alert directions for the cordon. You can draw different shapes for the zone that you want to protect in the live video image.

View on Web Browsers

You can also view the videos on web browsers. Internet Explore is highly recommended as the one that has the best compatibility. www.xmeye.net is the web server that is used for the web view. Before you can view it from the web, you need to install ActiveX. You can find it as below

If you have many cameras, you can manage the cameras by user. If you only have one camera, we recommend you view it by device. You can find the device serial number from your app,find it on app, in " Settings">>" About">>" Serial Number", click to copy it.

View on PC Software

- **Step 1:** Download PC software from **https://www.techage.com/pages/download**. VMS for Macbook and CMS for windows PC. After opening the pc software, click" Login" directly. Do not need to input a password, as default none password, just leave it blank.

 **Step 2:** Choose Device Manager>IP4 search, then find your NVR and choose it. Click "Add"

- After that click the to edit the device, and update the password if you've already changed the password of the device. And then back to the Home page and click"Live View", double click your device IP and you can view your device in the VMS.
