Thermaltake Power Supply Series (Optional)

As today's technology updates rapidly, consumers are always requesting higher and higher PC performance, which also increases loads to power supplies. Therefore, selecting a suitable and reliable power supply becomes a necessary lesson for all PC users.

Why Choose Thermaltake Power Supply? Quality From Within

Every power supply unit from Thermaltake should pass very strict quality control before being sent to customers, including BIT(Burn-in-test) for over 8 continuous hours in a 45°C room to test if a unit can run normally under usual scene, and Hipot test to ensure the power supply unit can survive and protect both users and their systems when the voltage volume surges.

Less is more

In order to prevent wasted energy, all of Thermaltake's products should have at least 80% transforming efficiency, and we're also one of the manufacturers that have the most 80 PLUS certificates. Because Thermaltake knows how to save for the earth and customers; we know what makes less to be more.

Being Supportive By All Means

A product with better quality can have a longer life and working hours but less pollution. Thermaltake obeys and respects all environmental clauses in all countries and makes sure all of our products are both user and environmental-friendly. Therefore we show our support by giving 2 to7-year warranties, which is not only a quality commitment to the users but also love to this planet by reducing resources and waste.

Thermaltake has several power supply product lines; please refer to our official website and Facebook Fan Page for more detailed information!
