## Firestorm Digital 3 USB Controller

QUICK INSTALL

## TECHNICAL FEATURES

- 1. 8 action buttons
- 2. 8-way D-Pad

For PCs (Windows 98 or higher) equipped with USB ports.

## PC SETUP

The USB connector allows you to hot-plug your Firestorm Digital 3 Gamepad directly into your computer.

1. Start your computer up and plug the USB connector into one of the USB ports located at the back of your computer.

Windows 98/Me/2000/XP will then automatically detect the new peripheral device.

**Note:** if you are connecting a USB peripheral device for the first time, Windows may ask you for the Windows CD-ROM during installation in order to install the required system files.

Under Windows 98: the Add New Hardware Wizard will find the appropriate drivers for you. Simply click on Next and then follow the on-screen instructions to complete the installation.

Under Windows Me/2000/XP: installation of the drivers is carried out automatically.

2. To ensure that the gamepad has been properly installed, click on Start/Settings/Control Panel, then double-click on the Game Controllers icon.

If the gamepad has been installed correctly, it will appear in the list of game controllers, with OK status.

**Note:** in the event of malfunction during use due to electrostatic emission, please exit the game and unplug the unit from your computer. Resume normal game play by plugging the unit back in and restarting the game.
