TLJ access control Invisible Lock Set

DIMENSION

Please Note: Alternative lever & escutcheon may be used, and keeper may be radial.

TOOLS

4pcs Handle
Fixing Screws

2pcs screws for Lock case

2pcs Lever
Spindles

4pcs screws for cylinder
escutcheon

4 x AA Batteries

Not Included but required

European profile cylinder with Thumbturn

Drilling/Routing Template

(Please note drawings NOT to scale)

Standard Invisible Drilling Holes

Large format versions available, please contact TLJ at support@tljlimited.com

WARNING – Failure to Install as illustrated will void CE, UL, UKCA, CertiFire & Warranty

Operating Guide

(Based on using the TLJ Qlite or Qcloud platform)

RFID Contactless

The TLJ Invisible lock set can be operated via RFID (radio frequency identification) Specifically MiFare 13.56Mhz key cards, key fobs, wristbands or even sticker tags. If the RFID credential is valid when presented to the front panel it will sound a “beep” and activate the motor so the lever can be rotated downwards and in turn retracts the latch. The lock will also display a blue LED. Invalid credentials will show a red LED and blink a number of times, it is important to count the quantity of red blinks as this helps to diagnose the reason why access was rejected.

Smartphone App using BLE

BLE stands for Bluetooth Low Energy, the lock set allows an App (iOS and Android) to operate it. Ensure to be close by to the lock set, and that Bluetooth is enabled on the smartphone. Press the unlock icon on screen within the app, the red and blue LED will blink rapidly as the BLE key is being validated, and then if valid the same blue LED will display and a beep will sound

FCC

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment of and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. Consult the dealer or an experienced radio/TV technician for help.

Declaration of Performance can be found at www.TLJlimited.com
