A3002RU Wireless SSID password setting

It is suitable for: **A702R, A850R, A3002RU**

Application introduction:

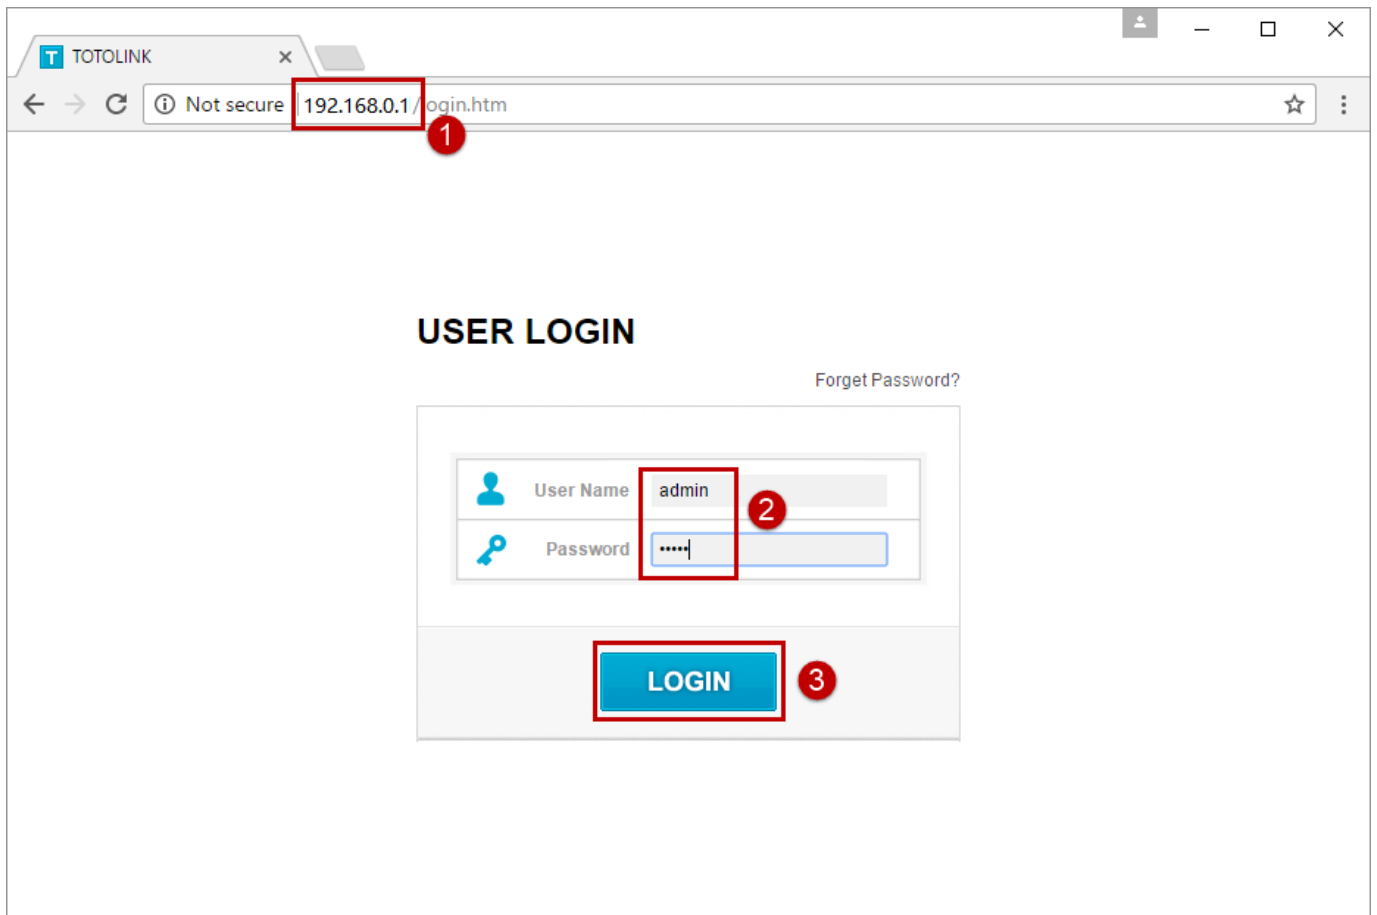

The Wireless SSID and password are the basic information for you to connect Wi-Fi network. But sometimes you may forget or want to change them regularly, so here we will guide you how to check or modify the wireless SSID and password.

Settings

STEP-1: Enter the setup interface

Open a browser, enter **192.168.0.1**. Input User Name and password (default **admin/admin**) on login management interface, as follows:

Note: The default access address varies depending on the actual situation. Please find it on the bottom label of the product.

STEP-2: View or modify the wireless parameters

2-1. Check or modify in Easy Setup page.

Login management interface, first enter the **Easy Setup** interface, you can see **5G and 2.4G wireless settings**, as follows:
