How to extend existing WiFi network by the extender?

It is suitable for **EX150, EX300**

Method 1:

Press the WPS button on the router and the extender, a secure WiFi connection can be established quickly to extend the coverage of your existing wireless network.

Method 2:

1. Please login the extender's web-setting interface. (Default IP address: 192.168.1.254, User name: admin, Password: admin)

2. Click Extender Setup on the left side.

3. Choose **Start** and click search AP button.

4. Please choose the SSID you want to connect to.

5. You should enter the password in the corresponding field and click **Apply** to save settings and make it take effect.

After that, you have finished the steps about extender setup.
