How to Find the Hardware Version on a TOTOLINK device?

It is suitable for: **All TOTOLINK Model**

Application introduction:

Some TOTOLINK products have more than one hardware version, using V1, V2, etc for separation, and generally, each hardware version corresponds to a specifically developed firmware.
If you want to upgrade your device to the latest firmware, you need to choose the correct firmware version for your device.

 CAUTION

All content on this website is only applicable to models selling in overseas markets (outside China mainland, Taiwan and South Korea), any model purchased from China mainland,Taiwan or South Korea caused damage by upgrading software on this website is excluded in after-sales service range

For most TOTOLINK products, you can see a bar coded sticker at the front of the device, there is a character string "**VX.Y**" (for example, V1.1), See below:

5bd917f105b9c.png

The number **X** is the **Hardware Version** of your device. If the string shows "V1.y", it means the hardware version is V1.
