How to judge the T10 status by State LED?

It is suitable for: T10

STEP-1: T10 status LED position

STEP-2:

After the MESH network is set, if the setting is successful, the slave T10 will be in a state of steady green or orange light.

2-1. Green light indicates excellent signal quality

2-2. Orange light indicates that the signal quality is normal

Noet: In order to get a better experience, it is recommended to install the T10 to a position where the green light can be displayed.

STEP-3:

After the MESH network is set, if the setting fails, the slave T10 will be in a steady red state.

3-1. Red light indicates that MESH networking failed

Noet: It is recommended that you place the T10 next to the main T10 and try the MESH networking pairing again.

STEP-4: The light shows the status description table

Solid green Solid green It may take about 40 seconds; please wait. It means the Satellite is synced to the Master successfully, and the connection between them is strong. * The router finishes the booting process and is working normally. * It means the Master is synced to the Satellite successfully. State LED (Recesse d) Blinking alternately between red and orange * The sync is being processed between the Master and Satellite angle * The Master and Satellite failed to sync. * The connection between the Master and Satellite is poor. Consider moving the Satellite closer to the Master. Solid orange (Satellite) The Satellite is synced successfully to the Master, and the contection between them is good. Blinking red While the reset process is being proceeded. Button/Ports Description * Reset Router to factory defaults:	LED Name	LED Activity	Description
Solid green * It means the Satellite is synced to the Master successfully, and the connection between them is strong. * The router finishes the booting process and is working normally. * It means the Master is synced to the Satellite successfully. State LED (Recesse d) * Blinking alternately between red and orange * The sync is being processed between the Master and Satellite. * The Master and Satellite failed to sync. * The connection between the Master and Satellite is poor. Consider moving the Satellite closer to the Master. Solid orange (Satellit e) * The Satellite is synced successfully to the Master, and the contection between them is good. Blinking red While the reset process is being proceeded. * Reset Router to factory defaults:	,	Solid green	★ The router is booting. The process finishes until the state LE D blinks green.
* It means the Satellite is synced to the Master successfully, and the connection between them is strong. * The router finishes the booting process and is working normally. * It means the Master is synced to the Satellite successfully.
