Application introduction: This router has a built-in real time clock which can update itself manually or automatically by means of Network Time Protocol (NTP). As a result, you can schedule the router to dialup to the Internet at a specified time, so that users can connect to the Internet only during certain hours.

STEP-1: Check Time Zone Setting

Before using schedule function you have to set your time correctly.

1-1. Click **System->Time Zone Setting** in the sidebar.

1-2. Enable NTP client update and choose the SNTP server, click Save Changes button for saving changes.
