Touyinger HQ7W Projector Home Theater Projector

Specifications

- **Brand:** Touyinger
- **Model:** HQ7W
- **Display resolution:** 1920 x 1080
- **Mounting Type:** Tabletop Mount
- **Wattage:** 5 watts
- **Controller Type:** Button Control
- **Control Method:** Remote

What's in the box?

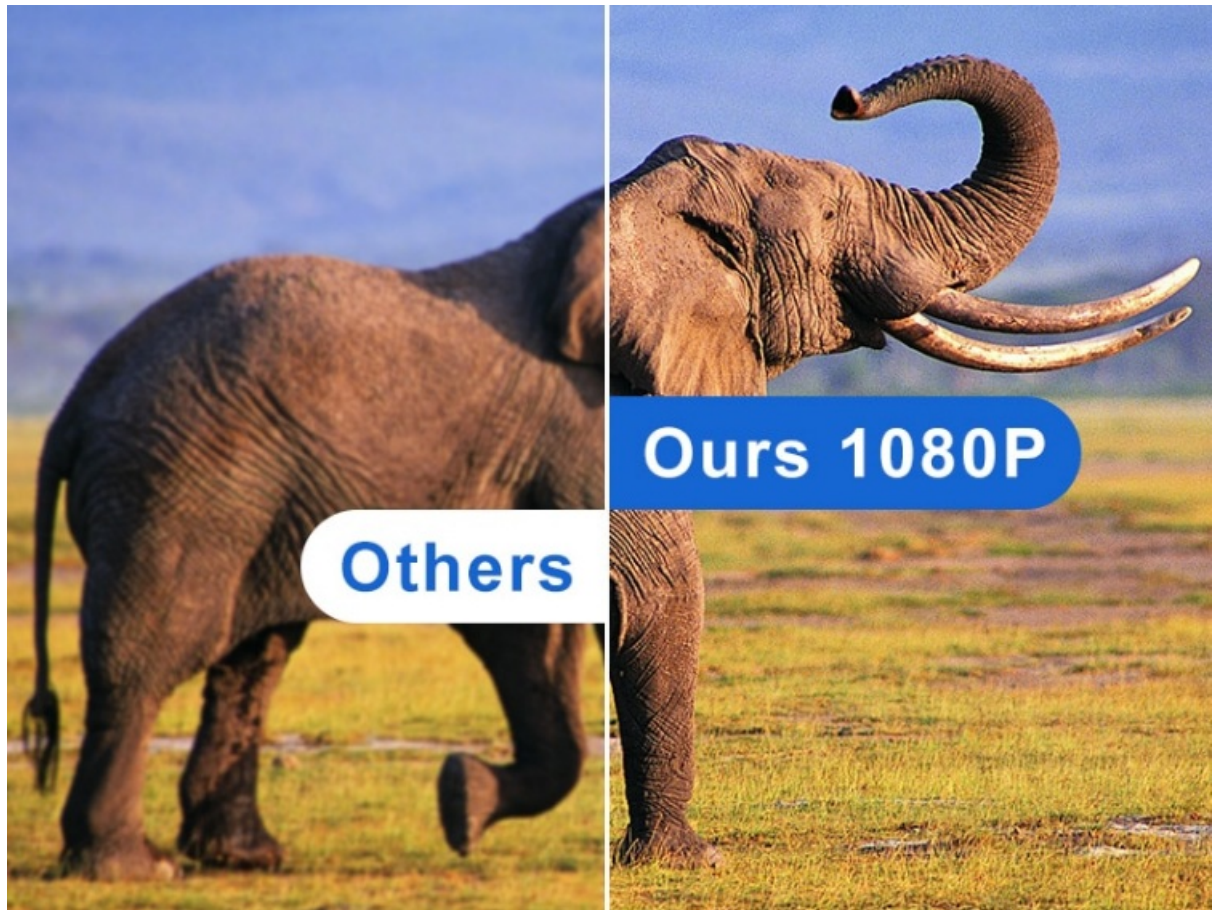

- Projector
- Remote control
- AV cables
- Power cords
- User guides

Description

An image (or moving images) is projected onto a surface, most frequently a projection screen, by an optical device called as a projector or image projector. Although some more recent types project images directly using lasers, most projectors create images by transmitting light via a tiny transparent lens.

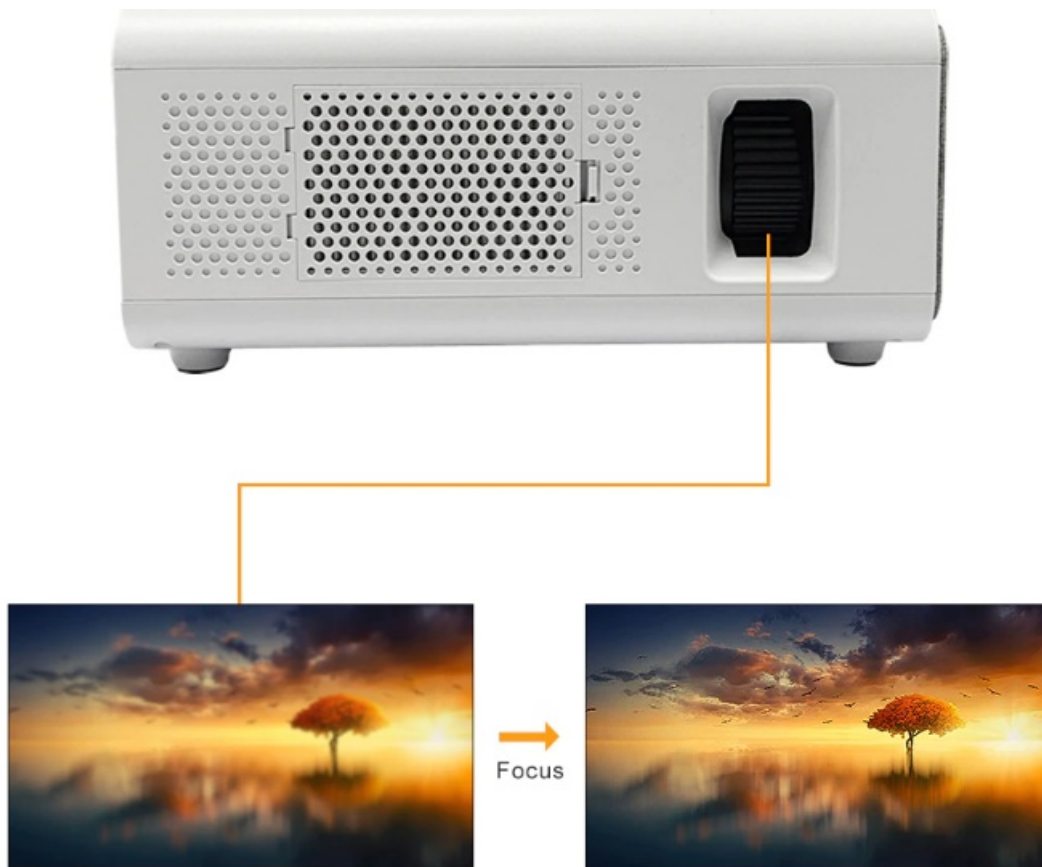

Features

Real Full HD 1080P Projector – 7000 Lumens, 1920×1080 DPI

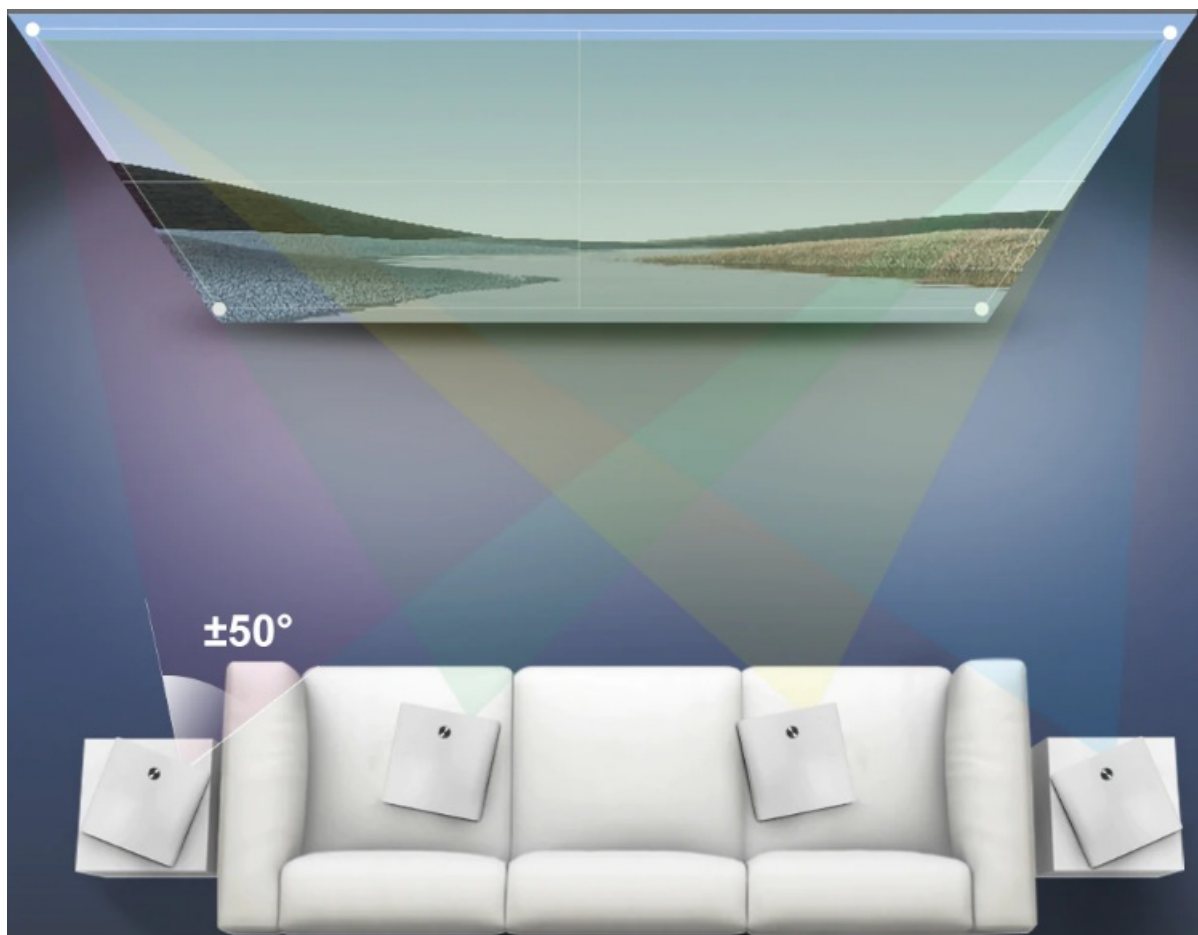

- Maximum resolution supported by 4K (Android version only)
- Built-in 4 to 5 W*1 independent speaker, Bluetooth support
- Enjoy HIFI stereo sound effects and listen to music whenever and wherever you want with headphones or a portable speaker.

Assistance with wireless screen mirroring

Simple image sharing from your phone to the projector lets you and your family take use of a larger screen.

Encourage manual focusing

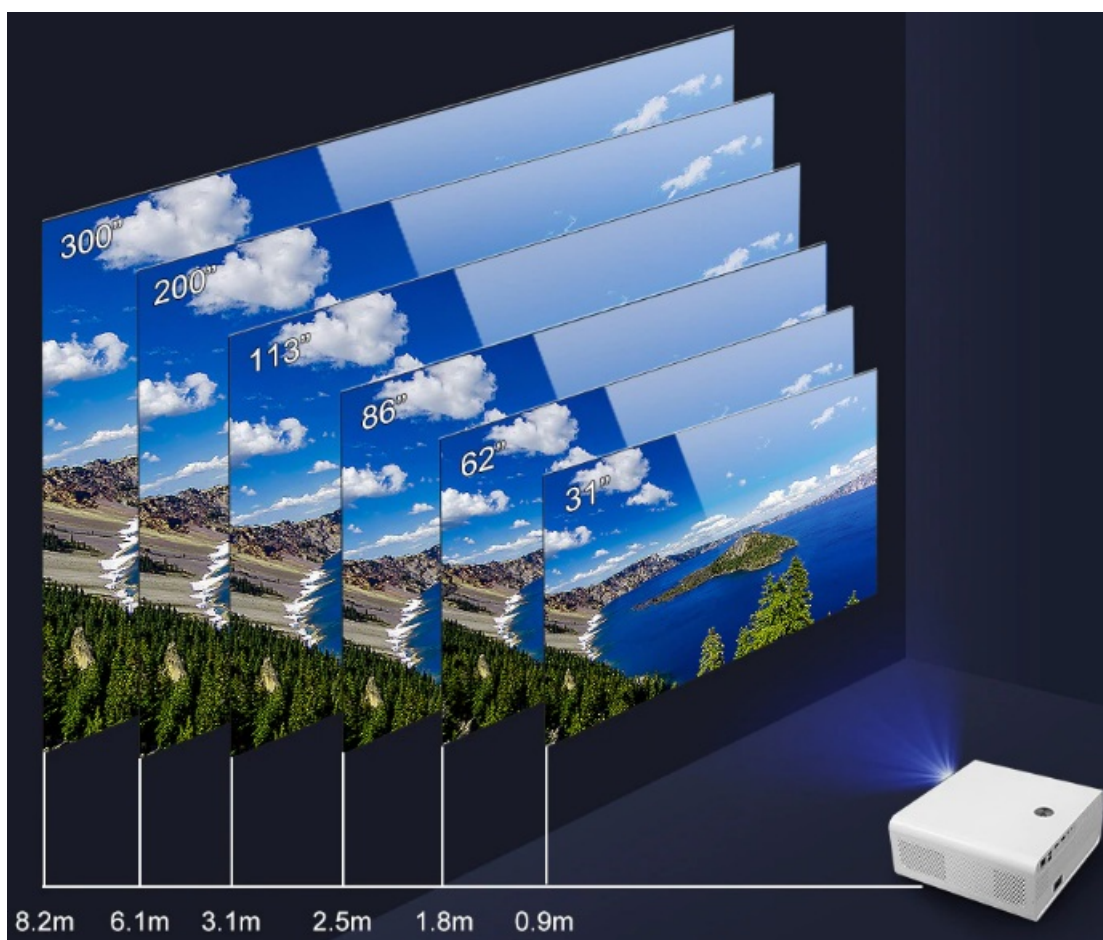

Support for 4-Point Keystone Correction, 50° Vertical and Horizontal Electronic Keystone.

Lens with High Transmittance Glass Coating

Resistance to high temperatures, lack of deformation, and lifetime of 50,000 hours

Large Projection Size, Small Body

This projector size is small but it project a big and bright image

Multi-Scenario Software

Applications with rich scenes that can be utilized for work, leisurely movie watching, playing games with kids, etc.

FAQ's

Does this use batteries or a cable for power?

Using cable

How can I make the pictures look better?

Use the sliders in the editing panel of Adobe Photoshop Light room or the Camera Raw filter in Photoshop to improve an image's overall appearance or the details in a photograph. To obtain the best possible digital data for your shot, try using these techniques.

How can I improve the brightness and clarity of my projector?

- The luminescence has increased.
- Clean the lens of your projector.
- Clean the air intakes and exhaust ports on your projector, or if it has a detachable air cleaner, remove it and clean it.
- Increase the brightness of your projector's lamp.
- You should choose your projector's brightest output mode.
- Replace a projector bulb if it is getting close to the end of its useful life.

What level of brightness works best for projectors?

Lumens are units used to describe a projector's brightness. You require a minimum of 1500 lumens for home theatre projectors when ambient light is kept to a minimum. Boardrooms, lecture halls, and rooms with windows can all use a projector with at least 2500 lumens.

How can I alter the projector's colour?

- Changing the colour palette
- Switch on the projector and show a picture.
- On the remote control, press the Settings button. You see the following on a screen:
- Click the Color Mode button under Image.
- From a list, you can choose the colour mode.
- To return to the previous screen, press Esc or click Settings to close the menu.

What shade would be best for a projector's wall?

Although a projector can be mounted on a wall, choosing the proper colour of projector screen paint will result in the best viewing experience. Grey frequently performs best because it strikes a compromise between the contrast and light-absorbing properties of black and white.

Does it have to be dark to use a projector?

The picture quality does, however, improve with increasing darkness. For a projector to provide contrast that makes an image appear bold rather than washed out, darkness is required. Additionally, it will make any necessary colour calibration easier.

How is a projector's lens cleaned?

Always clean the projector's lens on a regular basis or if you spot dirt or smudges on the surface. Use lens-cleaning paper to delicately remove any dust or smudges from the lens.

Can you quickly replace the bulb in a projector?

It takes far longer and more effort to entirely replace a projector bulb than it does to simply install a new module and fit it into the projector. Because there are typically multiple screws keeping the bulb in place and electrical connections connecting it to the cage, changing the bulb might be difficult.

Is a projector light dangerous?

The eyes are harmed by direct blue light from TVs and other devices. Even the blue indirect light from a projector is much easier on the eyes.

Does a projector require a white background?

Unlike what you would ordinarily see from a projector, which frequently assumes a highly reflective surface like a white screen or wall, the image you get with Wall Color Mode is suited for a far wider variety of surface reflectivity levels.

Can I use my phone to project?

Screen mirroring, Google Cast, a third-party app, or a wired connection are all ways to transmit the display of your Android phone or tablet to a smart TV or one without Wi-Fi.

Do projectors require maintenance?

Fact: Regular cleaning may have extended the lives of up to 90% of projector bulbs and more than 80% of projectors. Regular cleaning is necessary to preserve your projector's peak performance and increase its longevity.

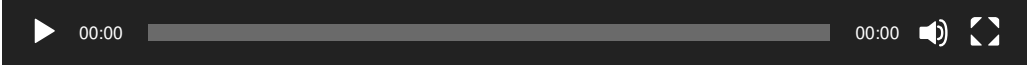

Can I clean my lens with soap?

When you can, wash your hands with antibacterial soap and dry them with a lint-free towel. You should avoid using soaps with oil or lotion bases because they could make your lenses foggy or unclean.

Why can't my projector play movies?

Make sure the PC and projector are connected properly. A VGA, DVI, or HDMI cable will normally be utilised for this connection. Make sure the cable's two ends are properly fastened.
