cut the end plastics of the new motow

Remove the old motor,
Connect the line
red to red, blue to blue

Avoid connection between diferent line

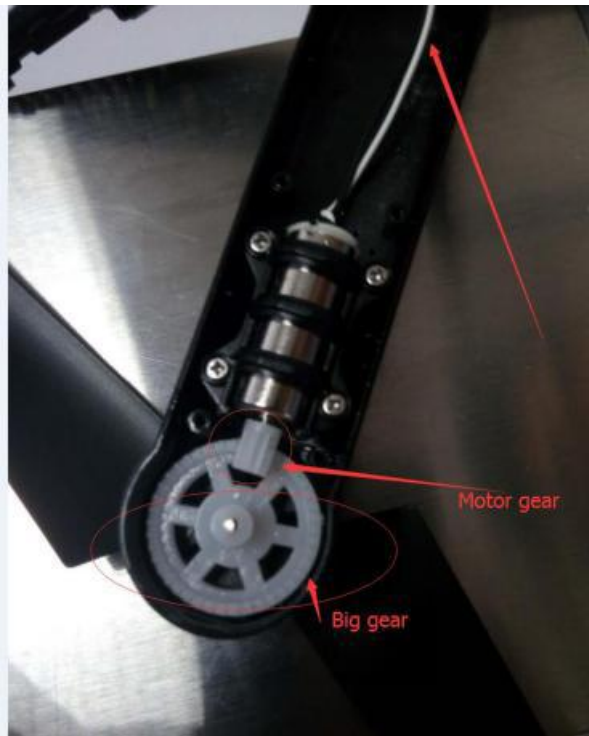

Restall

NOTE 2:
[Most of the parts are available at amazon, drone fans always Search [q1012 part] at amazon, so that they can find out the part
To upgrade their drones.
]
If one of the propellers can not work, or spin slowly, please check the motor and gear set, the new motor and gear set will help to make it work again.
Please refer the below step for how to replace the motor.

NOTE 3: Emergency Stop
When out of control, Just press both L2 & R2 buttons down to an emergency stop to prevent more damage.

Here are some friendly warm tips

—1—. Attention: Please read through the manual and fully charged the battery before flight. And only use under adults supervision.

—2—. It need to adjust the acceleration before a new flight. Please turn on the drone first, then turn on the controller later.

—3—. Suitable for pilots teenage or older. Only use under adults supervision.

—4—. No need TF card on this WIFI version drone. The photos and video will be stored on the Phone through APP (need scan the QR code that can be found on package and manual page 13 to download).

—5—. Try best to prevent collisions, it may be knocked broken and the propeller would fly off. For this issue, a new set of below whole set of propellers will make it work again. (Search amazon<Q1012 part>)

—6—. When out of control, just press both L2 & R2 button down to an emergency stop to prevent more damage

—7—. It come with a USB charger cable (The adapter is not included). (USB cable red LED will be off while recharging, it'll turn red after fully charge)

—8—. Fly time 5-7 mins, and need about 60-80 mins for a fully charge. RC drone fans always have the extra battery for more funds. The motors and circuit board and battery may heat up with use. Take a 10-minute cooldown break between flights and recharge to ensure your parts last as long as possible.

—9—. After flight, drone LED flash means battery is closing to exhausted, please stop fly IMMEDIATELY. Otherwise, it would be out of control and damage the battery by over-discharge. RC drone fans always have the spare battery for more fun.
