### **InSight Series Bullet Network Camera**

## **Product Information**

# **Specifications**

- Model: InSight Series Bullet Network Camera
- Model Number: S345ZI (used for demonstration)
- Power Supply: Power over Ethernet (PoE) supported
- Storage: microSD card slot for local storage
- Network Interface: RJ45
- Audio Interface
- Alarm Interface

# **Product Usage Instructions**

# **Chapter 2 Installation**

### 2.1 Safety First

- Ensure power supply matches the camera requirements.
- Wall should be capable of bearing at least 4 times the weight of the camera and mounting bracket.
- Do not connect the device to a power source during installation.
- If unsure, seek assistance from a qualified electrician.

#### 2.2 Mount the Camera

 Prepare the necessary items: microSD card, Nano SIM card (for 4G Camera), Waterproof Tape (optional), Pole Mounting Brackets (optional).

# **Chapter 3 Configuration**

#### 3.1 For Wired Camera

Instructions for configuring the camera for wired connection.

### 3.2 For 4G Camera

Instructions for configuring the camera for 4G network connection.

# **FAQ**

# **Appendix FAQ**

### Q: What is the purpose of the microSD card slot?

A: The microSD card slot is used for local storage to record videos. Make sure to initialize the SD card before recording.

### Q: What does the Status LED indicate?

A: The Status LED provides information such as starting up, network connection status, SIM card detection, and more. Refer to the manual for detailed explanations of different LED statuses.

Chapter 2 Installation

2.1 Safety First

Make sure your power supply matches your camera. The power source should comply with Power Source Class 2 (PS2) or Limited Power Source (LPS) of IEC 62368-1.

Make sure that the wall is strong enough to withstand 4 times the weight of the camera and mounting bracket.

Make sure the device is not connected to a power source when mounting and connecting cables.

If you are uncertain or uncomfortable performing the installation, consult a qualified electrician.

2.2 Mount the Camera

#### Chapter 3 Configuration

3.1 For Wired Camera Here is a typcial network topology. You can add and manage your devices via any of the methods.

**Network Camera** 

Network Device (e.g., Switch or Router)

**VIGI NVR** 

Monitor

#### **Network Camera**

Via NVR The camera works with an NVR for easier batch access and management. Here we use a VIGI NVR as an example.

- 1. Connect your cameras to the same network as your NVR.
- 2. Power on your cameras with the PoE power supply or an external power supply.
- 3. Right click on the Live View screen on the monitor, and click Add Camera.
- 4. Select your camera and click + to add your camera directly. If you have disabled Plug and Play on your NVR, create a password or use a preset password for your camera. Note: If you are using your cameras with other NVR brands, follow the steps below. 1.

Power on your cameras and connect them to the network. 2. Activate the cameras using the TP-Link VIGI app or web management page. 3. Refer to the NVR's User Manual to add cameras.

Via VIGI App

You can remotely view live video, manage device, and get instant alerts via VIGI app.

1. Download and install the latest TP-Link VIGI app.

or

2. Open the app and log in with your TP-Link ID. If you don't have an account, sign up first.

3. Tap the + button on the top right and follow the app instructions to add your NVR.

Via Web You can view live video and modify camera settings via a web browser. 1. Find the camera's IP address on your router's client page. 2. On your local computer, open a

web browser and enter https://

camera's IP address (https://192.168.0.60 by default). 3. Select your Country/Region

and Time Zone. 4. Set a password to activate the camera. 3.2 For 4G Camera Here is a

typcial network topology. You can add and manage your devices via any of the methods.

Note: When using InSight S345-4G to provide network connections to two cameras

simultaneously, ensure that its uplink bandwidth is at least 22 Mbps.

or VIGI

Base Station Internet

Network Camera × 2

12

Via VIGI App 1. Download and install the latest TP-Link VIGI app.

or

2. Insert a Nano SIM card into the SIM card slot. 3. Connect the camera to the power

socket via the provided power

adapter or the solar panel, and wait until the LED is solid green. 4. Open the app and

log in with your TP-Link ID. If you don't have an account, sign up first. 5. Tap the + button on the top right and follow the app instructions to add

your NVR.

Note: 1. It is recommended that you insert a micro SD card for local storage. And initialize SD card via VIGI app or other management tools before recording videos. 2. For more detailed instructions, refer to the user guides at https://www.tp-link.com/support/

Via Web (for Wired Connection) If you connect your camera to the network via an Ethernet cable, you can also access and manage your cameras via a web browser. 1. Find the camera's IP address on your router's client page. 2. On your local computer, open a web browser and enter https:// camera's IP address (https://192.168.0.60 by default). 3. Select your Country/Region and Time Zone. 4. Set a password to activate the camera. Via NVR (for Wired Connection) If you connect your camera to the network via an Ethernet cable, you can also access and manage your cameras via NVR.Before you start, make sure the NVR is working properly. 1. Right click on the Live View screen and click Add Camera.

2. Select your camera and click + to add your camera directly. If you have disabled Plug and Play on your NVR, create a password or use a preset password for your camera. Note: If you are using your cameras with other NVR brands, refer to the NVR's User Manual to add cameras.

14

#### Appendix FAQ

Q1. What can I do if no cameras are discovered? · Refresh to discover your camera again. · Make sure the camera is powered on. · Make sure your camera and NVR/computer are in the same subnet. If not, use the VIGI Security Manager to set camera's network parameters. · Try to add your camera manually. · For other NVR brands, make sure you have activated the camera by setting a password via the TP-Link VIGI app or web management page. Q2. What should I do if I

forgot the password of the camera? You can check the password of the camera via

VIGI NVR, or its web management

page. For more details, refer to the corresponding user guides. You can reset the camera and activate it again. During the activation process, you

can set a new password. Q3. What should I do if the SD card is not working properly?

Make sure you are using a microSD card. · Unplug the SD card and insert it again. Make sure you have inserted the SD card

correctly.  $\cdot$  It's recommended to use a Class 10 microSD card or higher, with storage from 8

GB to 512 GB. · Make sure you have initialized the microSD card via the TP-Link VIGI app or web

management page. · If the problem still persists, contact our technical support. If you have more questions, please visit https://www.tp-link.com/support/faq/2850/.
