### Trianium Clarium Screen Protector Instructions

## OVERVIEW GUIDE

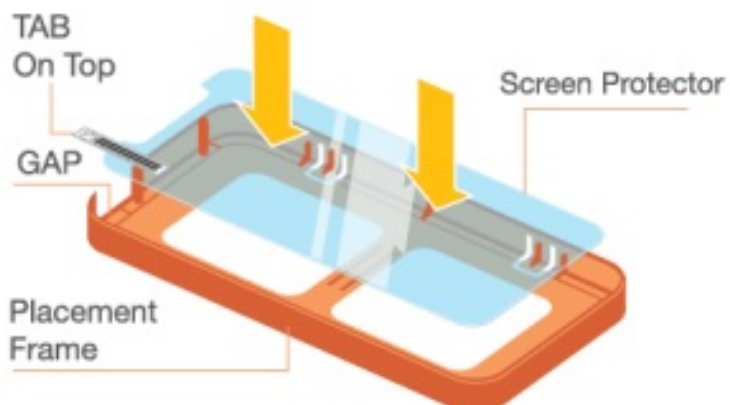

**Step 1:** Use the wet wipe and dry wipe to remove any dirt or liquid from the screen.

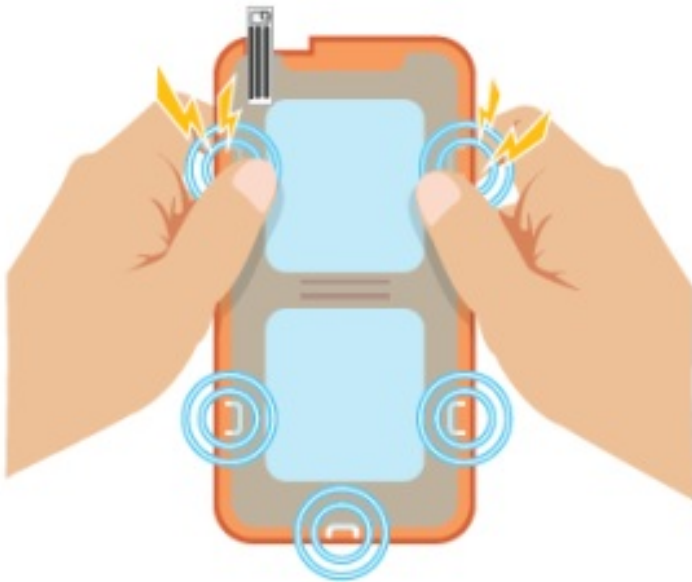

**Step 2:** Stick the large dust sticker across the screen to remove any dust. Step

**Step 3:** Flip over the Frame and ensure the tab is aligned to the gap.

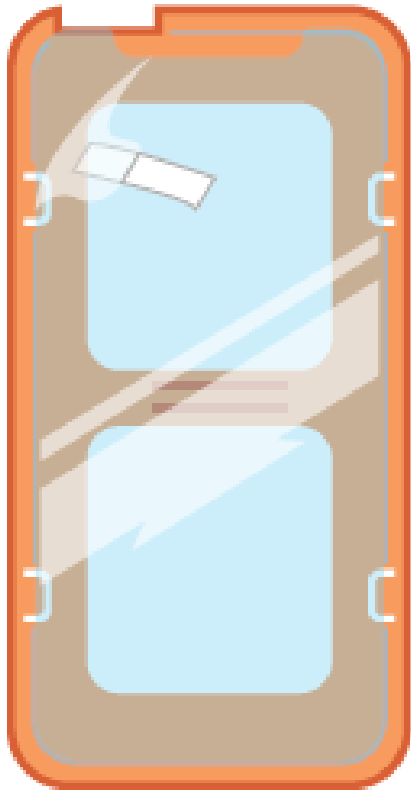

**Step 4:** Gently press down into the Frame. You will hear audible \*clicks\* when done properly.

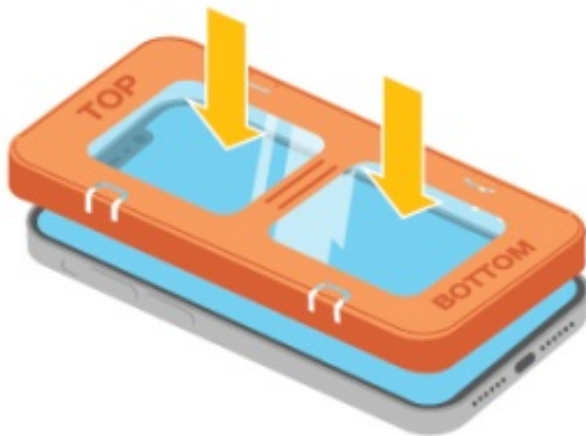

**Step 5:** Now, peel the large dust sticker off of the screen.

**Step 6:** Peel the tab back to remove the adhesive film.

**Step 7:** Flip the Frame once more. Now, align the written text of the Frame to the top and bottom of the phone. (DO NOT press the screen protector.)

**Step 8:** Firmly press down on all four corners to adhere the screen protector to the screen. Allow it to settle for 20 seconds. Then, gently remove the Frame.

Step 9: Push any remaining air bubbles to the edges using your fingers. Done!

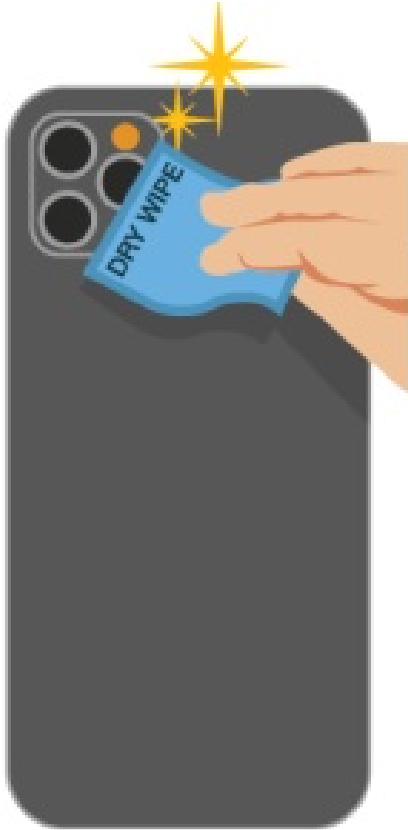

## CAMERA LENS PROTECTOR

**Step 1:** Use a wet wipe to remove any dirt from the camera lens.

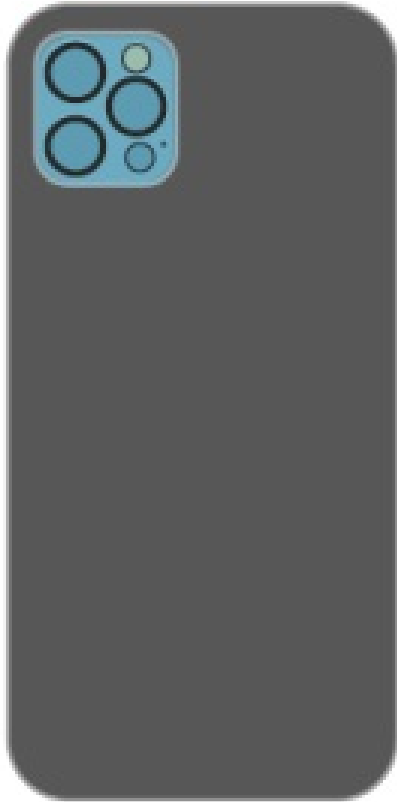

**Step 2:** Use a dry wipe to remove any liquid from the camera lens.

**Step 3:** Carefully bend the plastic film to peel off the lens protector.

**Step 4:** Align the lens protector into the grooves of the camera lens and gently press down to seal it into place.

**Step 5:** Use the dry wipe to remove any dirt from the lens protector. Congratulations! Installation is complete!

## SCREEN PROTECTOR

Q: Can this lens protector work with standard phone cases?

A: Yes. The lens protector works with the majority of popular phone cases. However, there are a select few cases that cannot be properly applied with the lens protector. On some cases, the camera lens hole may be too small to fit the grooves of the lens protector. In these rare cases, the lens protector may not be applied properly.

Q: What is the lens protector actually for? Do I really need it?

A: Yes, of course! The lens protector is an essential piece of protective covering that will protect the camera lens of your phone from dirt, dust, sweat, scratches, and much more. For those who often take pictures, it is a critical component of keeping your phone safe and protected.

Q: How is the camera lens quality while the camera lens protector is applied?

A: Excellent. The camera lens protector has an emphasis on support, convenience, and protection of the lens itself.

The camera quality while the lens protector is applied is matched with a high-quality capture and great visuals. But, the main focus of the lens protector is to protect and support the lens.

## CAMERA LENS PROTECTOR

Q: Why is the Placement Frame special? What is it needed for?

A: The Placement Frame is necessary for a fast and simple installation process. Ensure to follow the written text found on the front side of the protector to properly align the screen protector. The labels "TOP" and "BOTTOM" can be found inscribed onto the frame.

Q: What is the gap found in the upper corner of the Placement Frame for?

A: The rectangular tab MUST fit into the GAP at the upper corner of the Placement Frame. If this installation step is done wrong, the screen protector will not be applied properly. When done correctly, the adhesive film will peel off, exposing the screen protector, so it can then be applied to the screen using the Placement Frame.

Q: How many screen protectors come inside? Why do I need so many?

A: 2. There are 2 screen protectors provided because of the risk that you may accidentally drop your phone and damage the screen protector. If this happens, the screen protector successfully performs its job and absorbs the shock of the fall. Our screen protectors are built to absorb minor shocks or falls and we provide plenty of screen protectors for these occurrences.
