WASP v6 Mobile Asset

Product Information

Specifications

- **Product Name:** Mobile Asset v6
- **Version:** 6.0 and older
- **Compatibility:** Multi-PC version

Description

The Mobile Asset v6 is a software designed for managing assets across multiple PCs. It offers features such as database management and workstation tools for efficient asset tracking.

Installation

To install the Mobile Asset v6 software on a multi-PC setup, follow these steps:

Step 1: Initial Installation

1. Run the installation file and follow the prompts.
2. During the installation process, you will be asked to choose the installation options:
 - Install the database only on this PC
 - Install the tools only on this PC
 - Install both the tools and the database on this PC

Step 2: Setting up the Server

If you choose to install both the tools and the database or install the database only, the current PC will become the server.

Step 3: Configuring Client PCs

If you choose to install only the tools, you will be prompted to provide the computer name of the server that has the database. Follow these steps:

1. Type in the computer name of the server.
2. The workstation tools will now use the database located on the server for all its work.

FAQs

Frequently Asked Questions (FAQ)

- **Q:** Can I install the Mobile Asset v6 software on multiple PCs?
- **A:** Yes, the Mobile Asset v6 supports installation on multiple PCs. You can choose to install the database and tools on a single PC or distribute them across different PCs.
- **Q:** What happens if I install only the tools?
- **A:** If you choose to install only the tools, you will be prompted to provide the computer name of the server that has the database. The workstation tools will then utilize that database for all its work.

Mobile Asset – How To – Installation: We have a multi-PC version of the software. How do the client PCs know where the database is?

- Internal User – 2017-04-10 – in Mobile Asset v6
- When you first install it asks you if you want to install the database only on this PC, the tools only on this PC, or the tools and the database on this PC.
- If you install Tools and Database or install Database only, this PC is now your server.
- If you install Tools only, it then asks you what the computer name of the server is that has
- the database. You type in the server computer name and then the workstation tools use that database for all its work.
