### Pairing Bluetooth Device

- Go to Settings on your smartphone and place Bluetooth® into discoverable mode – Search for BTR- 1 3 device
- On the phone select BTR-1 3 to pair the device
- Once a device is paired each time the device is seen by the BTR-1 3 it will automatically reconnect to the device. If no paired device is present, the **BTR- 1 3** will go into discoverable mode and can be connected by another device

### REMOTE IN Wiring Connection

For the following, the “YELLOW” wire must be connected to a constant +12 volt *source* of the vehicle. While the “BLACK” wire must be connected to a vehicle grounded source/chassis.

- If using the MPS-BTK with a head-unit, connect BTR- 1 3 “RED” wire to head-unit’s “REMOTE OUT” wire (This is typically a “BLUE WITH WHITE STRIPE” wire on most head units)
- If using the BT14-1 3 with the vehicle’s ON/OFF key/switch, connect BTR-1 3 “RED” wire to the vehicle’s Ignition wire.

**NOTE: When connecting BTR-13 wiring to vehicle wiring remember to fuse connection for added protection.**

- If using the BTR-1 3 with a desire to have the controller be able to be turned ON/OFF at any time (whether vehicle or head-unit is powered up or not), DO NOT connect the “RED” wire to any other wire. Simply ensure the end of the wire is tapped off to not make a connection with any other wiring inside of the harness.

### REMOTE OUT Wiring Connection

- If using the BTR-1 3 to power up an amplifier, or other device’s “REMOTE IN” wire, connect “BLUE WITH WHITE STRIPE” (from the BTR- 1 3) to the amplifier remote IN terminal or other device’s “REMOTE IN” wire (this can be “BLUE WITH WHITE STRIPE”, “RED”, or other wire designated by that manufacture)
