WizarPOS Display Full Screen API

Overview

This guide explains how to use specific system APIs to hide the status bar and navigation bar, enabling a full-screen display on Android devices.

Important Considerations

Be aware that using these APIs affects the entire system, not just your application. When you hide the status bar or navigation bar, it remains hidden across all system interfaces and applications.

Permission

`android.permission.CLOUDPOS_HIDE_STATUS_BAR` The application declares permissions in the manifest.

API Overview

Hide or show status/navigation bar using HideBars

`void hideBars(int state)` Set status bar and navigation bar state.

Parameters

Parameter	Description
state	1: hide status bar, 2: hide navigation bar, 3: hide both, 0: show both. In a device without a navigation bar, sets 2 and 3 will throw <code>IllegalArgumentException</code> .

Here are some code snippets:

```
//hideBars:Object service = getSystemService("statusbar"); Class statusBarManager = Class.forName
```

GetBarsVisibility

int getBarsVisibility(); Get the state of the status bar and navigation bar.

Returns

Type	Description
int	the result, 1: hide status bar, 2: hide navigation bar, 3: hide both, 0: show both. In device without navigation bar, set 2 and 3 will throw IllegalArgumentException.

Here are some code snippets:

```
//getBarsVisibility: Object service = getSystemService("statusbar"); Class statusBarManager = C
```

Specifications

Feature	Description
API Name	Display Full-Screen API
Permission Required	android.permission.CLOUDPOS_HIDE_STATUS_BAR
Functions	hideBars(int state), getBarsVisibility()

FAQs

What does the Display Full-Screen API do?

It allows you to hide the status bar and navigation bar to enable a full-screen display on Android devices.

What permission is required to use this API?

The permission required is android.permission.CLOUDPOS_HIDE_STATUS_BAR.

What happens if I use the hideBars function on a device without a navigation bar?

Using set 2 or 3 on a device without a navigation bar will throw an IllegalArgumentException.

How can I check the visibility state of the status and navigation bars?

You can use the `getBarsVisibility()` function to get the current state.
