- The Rearview camera is connected to the type-c car charger cable (Details as the right picture)

The Rearview Camera and type-c car charger are on the same cable

	
MICRO USB	

Please reach us ASAP if professional help is needed. 32GB TF SD card/ Hardware Kit/Extension Cable, you can choose one for free. (Shipping address needed)

FAQ

Q: How to download the app for the mini dashcam/Where could I get the app for the mini dashcam?
A: IOS / Android Devices: search “LuckyCam” or “UCam” on App Store / Google Playstore.

Q: How to find my videos/pictures in the mini dashcam?
A. If your D07 has a micro-USB port, the below steps can help you:

1. Stop Recording: Short press the power button
2. Enter Photo Mode: Long press the Menu button
3. Take a Photo: Short press the power button * Enter Playback Mode: Long press the Menu button again to enter playback mode from photo mode
4. View List: Short press the Up/Down button to browse videos and photos

Q: Why can't my dashcam be turned on? /Why does my dashcam automatically turn on and off after using it for a period of time?

A:

1. Pls, confirm whether you're using the original accessories first. If not, pls use the original accessory and check the problem.
2. If your D07 has a micro-USB port, It may be caused by the poor connection of the magnetic part in the bracket, you can pull it out first and then wipe the magnetic thimble then back it to check whether it can turn on.
3. It may be caused by the accessories, you can check as below 3-1 Check whether the car charger cable is good Pull out the SD Card&Rear view camera&Car charger, use a micro USB cable(if you have), one side connects to the computer, another side connects to the power port. Then check whether the cam can be turned on. If yes, it may be the problem with the car charger cable, you can tell us your address to get one new car charger.

If still doesn't work(or you don't have a micro USB cable), pls connect the car charger cable only and then use a toothpick to press the "R" at the bottom of the dashcam for a while to check whether it can turn on. If still doesn't work, pls CONTACT US to get further help.

3-2 Check other accessories If D07 can work well when connected to the original car charger cable, pls connect the other accessories one by one and check as former. If there is a problem after connecting to a certain accessory, pls tell us, that might be the problem. Or you can tell us any questions.

1. Q: How to connect WIFI?

- A. You should download the app first, then connect the WIFI as below steps:
2. Turn the WiFi on Long press the UP button to turn on
 3. Find the WLAN on your phone and link it (password: 12345678 or check it on the screen on the dashcam).

Note

We have tested almost all common smartphones with Android, and ios systems on the market. If there still have problems connecting to the app, please feel free to CONTACT US. We will give technical support.

Q: Why the app keeps disconnecting. How can I fix this?

A: The available distance of the WIFI connection is 9-15ft, and it will be automatically disconnected if out of the range. If still disconnect within this range, you can forget the WIFI in your phone and restart both the mini dashcam and your phone, then re-connect.

The problem still exists, pls tell us to get further help.

Q: SD Card error occurs/The SD card isn't compatible with the mini dashcam/After formatting the card in the device, it intermittently fails to require to format again.

A: Please format the SD card or replace the SD card. Recommended TF Card Asin: B084CJ9T2R

Note

Class 10, U3 Speed Micro-SD Card for 4K Video is required. We recommend SAMSUNG Class 10, U3 Speed Micro-SD Card. Please DON'T USE any "SanDisk Ultra" or "Generic Class 10 for HD Video" Cards from third-party sellers. They are NOT made for 4K high-end dashcam. If you have any problems with the SD cards. please tell us and we will support you to solve it. Avoid fake cards.

Q: Won't loop recording/Loop recording doesn't work/Stop recording after recording a video.

A: Please format the SD card first. If still doesn't work, you can replace the SD card. Or CONTACT US directly, we will help you solve it.

Q: After connecting to WiFi, the phone shows no network.

A: Because the main function of DO7's WiFi is to playback video, it does not have the function of surfing the Internet, which means that after the wifi is connected, it will show that there is no network. But the APP can be used normally.

Q: The cord is too short for my car

A: If the car is large(such as trucks, RVs, etc.) the cable of the rear camera will be a little short. We have a 50ft extension cable to solve this problem, if you want, please contact us! Micro USB D07 Extension Cord Asin B0814ZHHST Type-C D07 Extension Cord: BO9TFHQW81

Q: My date and time are constantly changing/I have to reset the date&time again and again.

A: Please set [Timezone] before setting Date/Time.

Q: How to connect the hardwire kit.

A: Pls connect the yellow cable to BATT/B+, red cable to ACC, and black cable to GND.

Q: How to find the BATT, ACC correctly/Why does the battery still drain out after being connected to the hardwire kit.

A: BATT with electricity all the time no matter whether the car is on or off, ACC only has electricity when the car is on, you can use a voltage tester pen to check it accordingly. If you're still not sure about it, please provide your fuse box drawings to us, and we will let our technical department help you find them. If you connect both the yellow and red cable to the BATT, it will cause the battery to drain out.

Great Customer Service

If you have any problem with the function or installation, please feel free to TELL us.
