

How It Works

The Thermacell EX-Series is an on-demand mosquito repeller. The rechargeable battery powers a heater that diffuses mosquito repellent from the repellent refill into the air. Turn it on and within 15 minutes you will be protected from mosquitoes in the surrounding area. When finished using it just turn it off. It's that easy. No sprays to wash off and no candles to blow out.

EX Series

- 1 EX Series Zone Mosquito Repeller
- 1 Rechargeable Mosquito Repellent Refill
- 1 USB Cable

1. Getting Started

Your repeller has a rechargeable battery. Prior to first use, fully charge the battery. To charge the battery pull back the rubber cover to expose the USB charging port located on the front of the repeller. Insert the charging cable provided with the repeller. The battery indicator is located below the power button.

2. Inserting a Repellent Refill

- Remove top from the repeller.
- Remove the cap from a Repellent Refill.
- Insert the Repellent Refill into the repeller.
- Replace the repeller top taking care not to damage the Repellent Refill wick.

3. Using Your Repeller

- Press the power button to turn on.
- The repeller will sound with an ascending tone and the battery indicator will illuminate with current battery level. The repeller will then display a chasing pattern of light indicating it is starting to heat up. Once temperature is reached the ring will stay illuminated.
- It can take up to 15 minutes for the Zone to fully establish.
- To turn off press and hold the power button for two seconds: You will hear a descending chime and all lights will turn off.

Control Panel

Your repeller will communicate different statuses through the control panel.

Power Button - Turns device on and off.

Status Indicator - A visual communication tool that lets you know the repeller status. No need to pick up the device or get close to check.

4. Place Your Device

- Repeller is best placed in the center of the desired Zone of repellency.
- If it is windy, place the repeller upwind of where you are sitting.
- Only operate with vent facing up.
- Do not cover repeller while it is in use.
- To protect larger areas use multiple repellers.

Care & Storage

Do not store with battery completely discharged for extended periods of time. Batteries should be charged at least once every 3 months during storage.

- Occasionally debris or condensation may build up on your repeller device. Simply use a damp paper towel or rag to wipe away any build up.
- Do not expose the repeller to extended periods of rain or submerge in water.
- Do not expose the repeller to temperatures above 140°F.
- Store at room temperature in a dry environment when not in use.
