ZEPHYR LOCK

Work Manual

Fixed Mode (Administrator)

FC ID: 2BG47XLY-9000

Contents [hide]

Product Introduction

1. The following operations are for administrators only.
2. This operation guide applies to the controller in fixed mode.
3. The operation of this product has a total of 6 functional modules, which will show the operation steps for users according to the user's operation sequence.
4. Because the verification mode is set according to the customer's selection before delivery, the administrator needs to perform operations according to the actual interface

Instruction

Login Action

First, click on the red box in the upper right corner 5 times ➡

Secondly, in the login interface, enter the correct account and password ➡️

Click to log ➡️ in Login successful, can jump to the main interface

- The factory account is: admin, and the factory password is 1234. This account has controller management function, account and password leakage can cause system abnormalities;
- If the first person in charge is the cabinet manufacturer, and the cabinet manufacturer does not add an administrator on the controller side for the customer when selling, so it is necessary to inform the customer that the factory account and password must only be known to senior administrator, to authorize ordinary administrator in other departments, please add corresponding accounts in Account Management.

## Functional Module

System Setting

Click on administrator information ➡️ Select the administrator to modify ➡️ Enter the information you want to modify and click OK
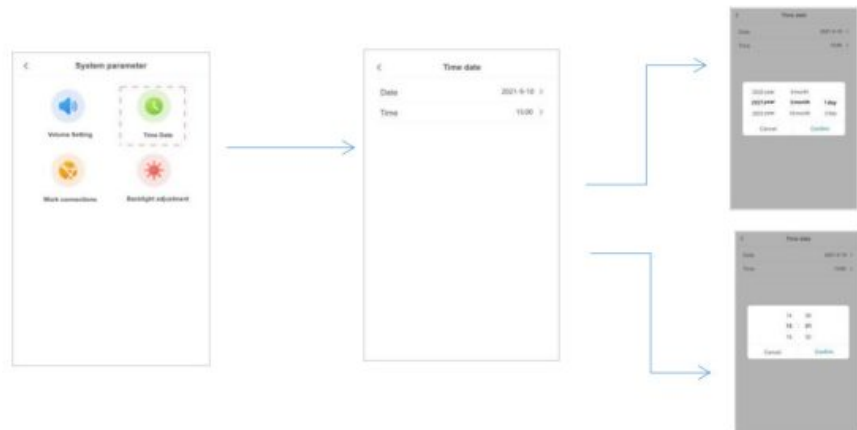

The system setting module is divided into 5 parts, and administrator can modify some parameters.

System Parameter Setting

Volume setting

Click on system device setting ➡ Click on volume setting ➡ Adjusting the volume ➡ Click on the volume setting to return to the homepage

Click on time and date ➡ Modification date and time ➡ Click OK
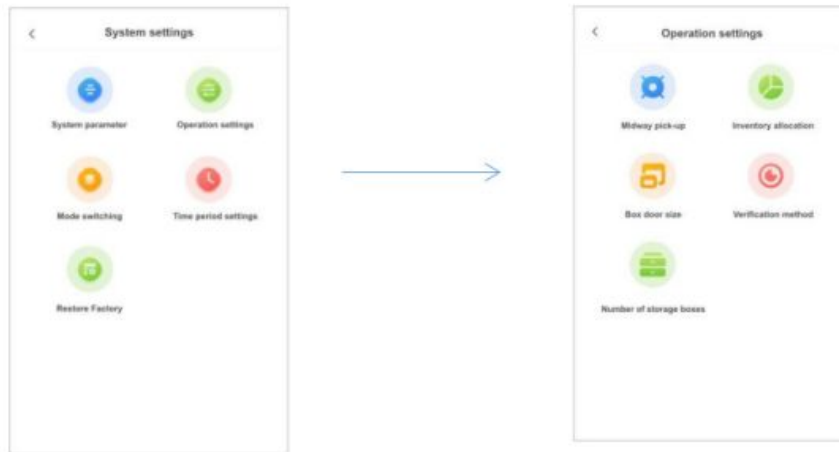

Network address

Network address can be modified according to actual conditions
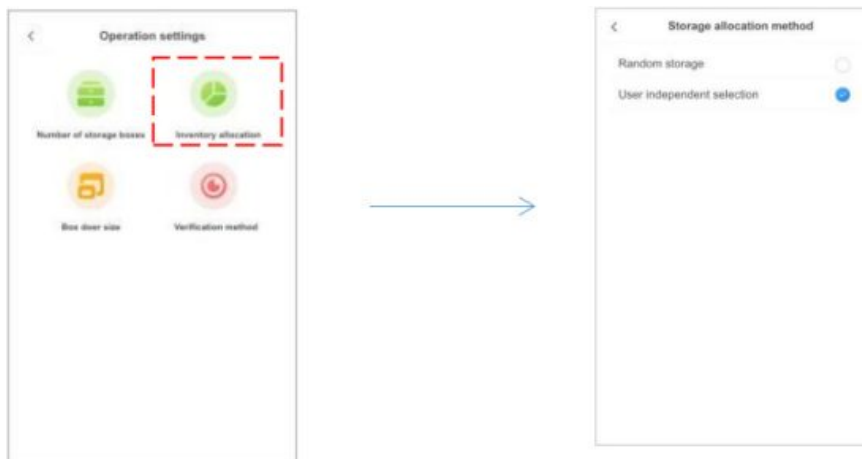

Backlight adjustment

Operation Setting

The operation setting module has a total of 5 functional components, which administrators can set according to actual needs.

Inventory allocation

Click on inventory allocation ➡ Choose the desired storage method

- In the storage process, choosing "random storage" means that the box door is directly allocated by the system during storage;
- During the storage process, selecting "user independent selection" means that the user can independently select the box door to open during storage.
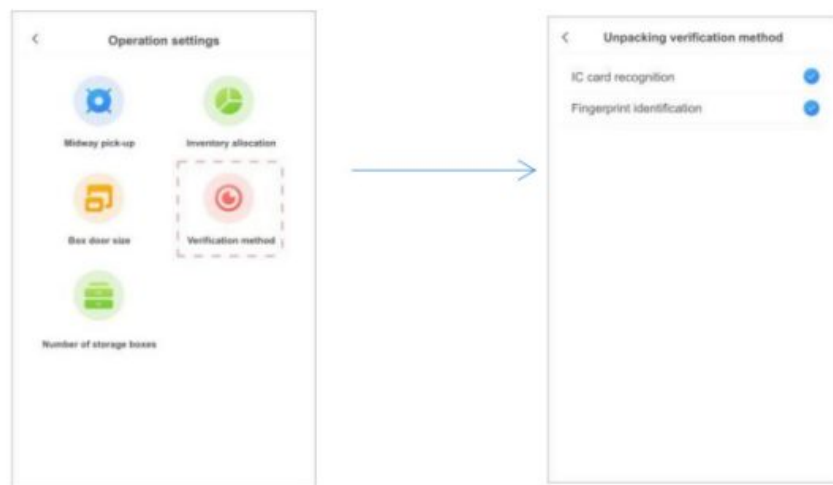

Box door size

Click on the box door size ➡ Do you need to set the size of the selected box door

- Administrator can choose whether to open the box door size setting based on the actual container.
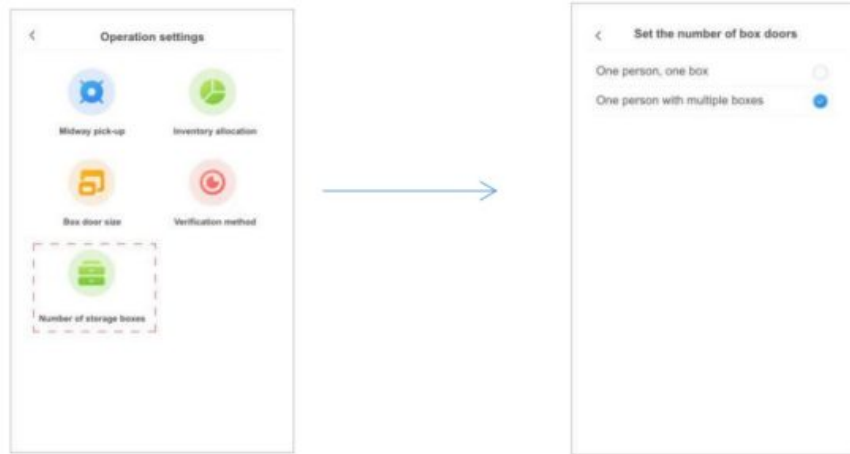

Unpacking verification method

Click on verification method ➡ Select verification method

- Selecting 'Fixed Mode' means that only users who have already been added can be hosted;
- Please note that after mode switching, the controller will restore its factory settings, but does not include administrator information.

Number of storage boxes

Click on the number of storage boxes ➡ Select the number of box doors that can be opened simultaneously by one person during storage

- Selecting "one person, one box" means that when storing items at a time, one person can only open one box door;
- Selecting "one person with multiple boxes" means that when storing items at a time, one person can only open multiple box doors

Mode Switching

Click on mode switch ➡ Select mode

- Select "sharing mode" to represent temporary users, or they can be hosted;
- In the shared mode, administrators add long-term fixed users on the controller side; It can also be deposited;
- Please note that after mode switching, the controller will restore its factory settings, but does not include administrator information.

Time Period Settings

Click on time period settings ➡ Set access window and cleaning time

Restore Factory

Click to restore factory ➡ Reconfirm whether to restore factory settings
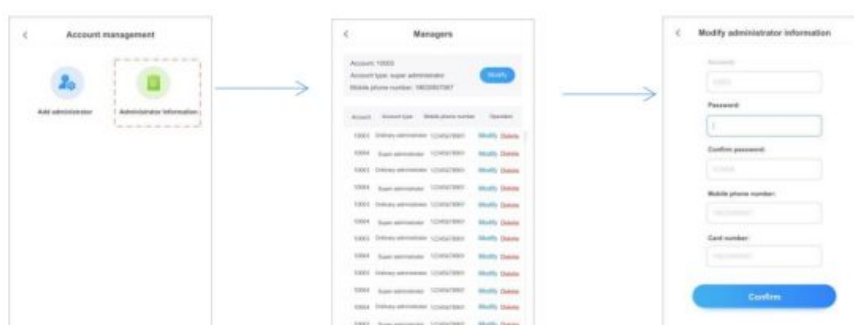

Account Management

Increase

Click on account management ➡ Click to add an administrator ➡ Fill in the newly added administrator information as required ➡ Click OK According to the system prompt, place the card at the swipe identification point.
After the interface prompts that the card has been successfully added, click OK
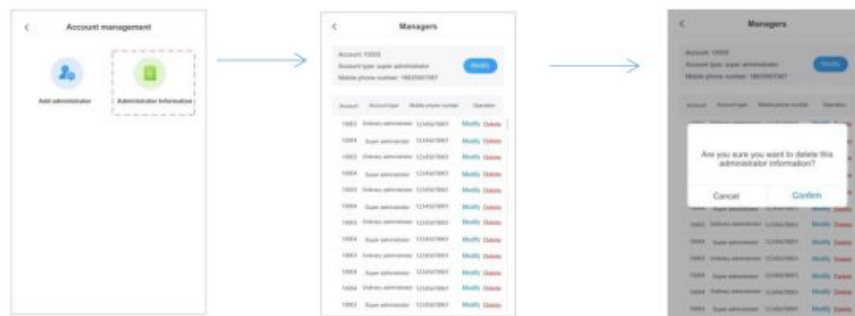

- When entering a card, if you do not want to enter it, you can choose "Skip" in the upper right corner;
- The account management module adds administrator, and company administrators can add department administrator here;
- When the added administrator logs in to the controller again, they can directly move the added card close to the sensor swipe card, which will directly redirect to the administrator login interface. The administrator account will be automatically filled in, just enter the password, you can log in now;
- Administrator can add multiple at the same time.
